Social Behaviour:

Handbook of Individual Differences in Social Behavior Mark R. Leary, Rick H. Hoyle, 2013-12-17 How do individual differences interact with situational factors to shape social behavior Are people with certain traits more likely to form lasting marriages experience test taking anxiety break the law feel optimistic about the future This handbook provides a comprehensive authoritative examination of the full range of personality variables associated with interpersonal judgment behavior and emotion The contributors are acknowledged experts who have conducted influential research on the constructs they address Chapters discuss how each personality attribute is conceptualized and assessed review the strengths and limitations of available measures including child and adolescent measures when available present important findings related to social behavior and identify directions for future study

Social Behaviour of Children Ralph E. S. Tanner, 2007
Contents Acknowledgements 1 Introduction 2 Irregularity and Indistinct socialisation 3 Ethology and pro social behaviour 4 Anthropology and pro social behaviour 5 Social environments a typology 6 Methodology the difficulties of data collection 7 Language and pro social development 8 Change and the pro social behaviour of the growing child 9 Social and physical environmental variations affecting the growing child 10 Parental care and the scarcity of uniformities 11 Education 12 Anti social behaviour 13 Generational relations and pro social behaviour 14 The transition in moral development Bibliography Index The behaviour of children within ages defined in most countries without regard to biological maturity or social usefulness is often concentrated on their failure and the failure of their carers to conform to what their societies expect of them This study attempts to show that children and their carers are genetically and ethologically channelled into behaviour to support the small groups in which they live For most of our known global history children have been seen as economic social and status assets to these small groups and their value assessed in proportion to their eventual contribution as adults They are not taught to behave in contributory ways but are absorbed into their need to be useful in terms of all those with whom they associate Cross culturally the growth of individualism and the decline of usefulness of children for their parents have led to pro social behaviour being much reduced to immediate benefits to children and for the small group in which they spend less and less time Teaching children to be useful to an impersonal society in which they have little interest is an industry in modern states Perhaps our conclusion must be that children will only behave in ways that their society deems correct when they sense on their own that it is profitable to do so The ethical values which have historically maintained the necessary unity of the small group have faded with the growth of survival through secondary employment and state welfare provisions

Consistency in Cognitive Social Behaviour C.J. Mower White, 2015-06-19 Social psychology remains unbalanced as long as we study human behaviour exclusively from the outside leaving out of account people's own reasons for acting as they do Originally published in 1982 the result of the author's emphasis on the cognitive dimension is a much more complete and well rounded textbook of social psychology than had previously been available Beginning with an exploration of the various models that have been suggested to explain the whole range of social behaviour the book goes on to argue that consistency comparability similarity congruity is the principle by which social behaviour can best be explained It goes into the cognitive processes that determine social attitudes ascription of certain characteristics to individuals and the attraction we feel to some people but not others It also shows how these processes can be extended and affected by group membership Consistency is important the author believes because it allows the maximum prediction of others behaviour and guidance of our own These functions are demonstrated by observing failures of consistency such as occur in humour and in negative self esteem and the author examines these inconsistencies in a final chapter

Individual Differences in Children and Adolescents Donald H. Saklofske, Sybil B. G. Eysenck, This uniquely authoritative collection of original papers with contributions from over twenty countries provides a rare insight into research and applied programs in the study of individual differences in children and adolescents worldwide While delinquency proves to be one of the most common areas of interest a wide range of cognitive personality and social characteristics are examined and the use of the Eysenck Personality Questionnaire in many studies allows uniform comparisons to be made between countries The editors have not only overcome the language barriers which hitherto have made such information virtually inaccessible to the English speaking world They have also succeeded in bringing together studies from developed and developing countries East and West to present a global picture of adolescent and child psychology In particular the book highlights the general and specific cultural influences on child development and adolescent psychology in different countries and reflects the social and research concerns of the countries and cultures represented The authors comprise a cross section of professionals in the social and behavioral sciences working in university and clinical settings While North America is well represented by six chapters including Puerto Rico as is Europe particular efforts were made to obtain contributions from Eastern Europe Asia and Africa At the time this book was developed information exchange with eastern European countries was most difficult It is very exciting to present chapters from Hungary Lithuania Romania Russia and Yugoslavia The inclusion of articles from Japan Korea Singapore Sri Lanka and Uganda also add another dimension to studies of individual differences in children Contributions from Australia Israel and New Zealand also allow the book to take on much more of an international perspective on topics ranging from delinquency fears and motivation to intelligence personality and assessment issues This volume provides a plethora of international perspectives on the study of

children It will be essential to sociologists psychologists educators and child study specialists
