The Biochemistry Of Intracellular Parasitism:

The Biochemistry of Intracellular Parasitism James William Moulder, 1962 *The Biochemistry of Intracellular Parasitism* by James W. Moulder James William Moulder, 1962 **Intracellular Parasitism** James W. Moulder, 1989-07-31
This publication is a collection of essays on the biology of intracellular parasitisms where both bacterial and protozoan parasites are discussed. The juxtaposition of authors representing fields of research emphasizes the many common problems facing intracellular parasites and the hosts that harbor them. In addition, numerous illustrations of how different parasites and host attempt to solve these problems in different ways are provided. The book includes one or more chapters on *Bdellovibrio*, *Chlamydia*, *Rickettsia*, *Coxiella*, *Legionella*, *Shigella*, *Mycobacterium*, *Microsporidium*, *Plasmodium* and *Toxoplasma*. The authors frequently speculate and generalize on the subject matter discussed. **Chlamydiae and the Biochemistry of Intracellular Parasitism** Grant McClarty, 1994 **Intracellular Parasites** José-Luis Avila, J. Robin Harris, 2013-11-11
Volume 18 of the Subcellular Biochemistry series which specializes in various aspects of the biochemistry of the intracellular parasites was initially proposed by Jose Luis Avila and strongly supported by myself as Series Editor of Subcellular Biochemistry. Considerable assistance was received from Professor Frank Wunderlich, University of Dusseldorf and more particularly from Dr Michael Miles, London School of Hygiene and Tropical Medicine during the compilation of the list of possible chapters. Our initial aim was to present a comprehensive survey of this broad field of study. Although some interesting topics have been lost due to authors backing out late in the production schedule of the book, the manuscripts that were submitted have provided a useful overview of the subject with notable strength within the field of *Leishmania*. The 13 chapters of the book have been grouped according to subject. The first five chapters deal with *Leishmania* and are followed by two chapters on *Trypanosoma cruzi*, two on the malarial parasites and two on the *Coccidia*. The final two chapters cover the *Microsporidia* and chemotherapy respectively. *Intracellular Parasitism of Microorganisms* Yuri F. Belyi, 2013-11-21
This book is about mechanisms of intracellular parasitism of *Legionella*, *Listeria* and *Mycobacterium*. The presented data illustrate the hypothesis that one of the ways by which intracellularly multiplying bacteria influence the bactericidal response of phagocytes is by altering signaling cascades in eukaryotes. To achieve this goal, bacteria are capable to produce enzymes and other biologically active compounds which misdirect signaling pathways for the benefit of the parasites. The book is composed of two main parts. The first provides general information on signaling cascades in eukaryotic cells. Analysis of *Legionella*, *Listeria* and *Mycobacterium* products possessing regulatory activity toward metabolism of host cells essentially by affecting signal transduction in eukaryotes is performed in the second section. **Biochemical Protozoology As A Basis For Drug Design** Graham H. Coombs, 1991-10-07
A compilation of articles on protozoological biochemistry which reviews the subject area and offers information on current research. Included in the Topics Covered Are Energy Metabolism Of Anaerobic Parasitic Protists, proteinases of African *The Evolution of Parasitism - A Phylogenetic Perspective*, 2003-12-09

Parasitology continues to benefit from taking an evolutionary approach to its study Tree construction character mapping tree based evolutionary interpretation and other developments in molecular and morphological phylogenetics have had a profound influence and have shed new light on the very nature of host parasite relations and their coevolution Life cycle complexity parasite ecology and the origins and evolution of parasitism itself are all underpinned by an understanding of phylogeny The Evolution of Parasitism A Phylogenetic Perspective aims to bring together a range of articles that exemplifies the phylogenetic approach as applied to various disciplines within parasitology and as applied by parasitologists Unified by the use of phylogenies this book tackles a wide variety of parasite specific biological problems across a diverse range of taxa Includes important contributions from leading minds in the field such as Serge Morand Francisco Ayala and Mark Blaxter among others Second in the ISI Parasitology List in 2002 with an Impact Factor of 4.818 Series encompasses over 35 years of parasitology coverage *Parasitic Protozoa*, 2012-12-02 Updated and much expanded the Second Edition of *Parasitic Protozoa* is designed to be useful to physicians veterinarians and research scientists concerned with diseases caused by protozoa in man and in domestic and wild animals including fish mollusks and insects as well as the more commonly considered vertebrate animals Each section contains information on disease pathogens treatment diagnosis and epidemiology of the diseases caused by the various protozoans The book is not limited to these medically oriented subjects but treats taxonomy morphology and metabolism of the organisms in such a way as to be of interest to scientists and graduate students working in the field of protozoology The entire edition published in ten volumes is arranged so that subjects of common interest occupy individual volumes Microbiology and pathogenesis of Chlamydia, Coxiella, and Rickettsia Rey Carabeo, Stacey Gilk, Scot P. Ouellette, Matteo Bonazzi, 2024-07-08 Obligate intracellular parasitism is the associated with genome reduction which is the process of reconfiguring the genome through systematic elimination of genetic loci deemed unnecessary The end result is an increasing dependence on the host for various factors essential for growth such as nutrients and a protective intracellular replicative niche The extreme genome reduction that some of the obligate intracellular bacteria have undergone while maintaining viability and virulence has revealed the level of adaptability including a plethora of survival strategies that more often than not functionally converge to modulate similar host cell processes such as cytoskeletal dynamics vesicular transport and pathogen recognition among others With the advent of molecular genetic approaches and in the case of *Coxiella* growth in axenic media the field of obligate intracellular pathogen research has progressed rapidly in the past five years redefining obligate intracellular parasitism as the field transitions from descriptive to mechanism based research An emerging theme is the adaptability and ingenuity of this class of pathogens Genome reduction prioritizes survival but because this occurs within a host there is also the need to maintain virulence As such survival strategies become intertwined and likely inseparable from virulence strategies The purpose of this Special Topics Issue is to bring together in one volume review articles from experts in the field This issue will have a broad scope Articles will describe the current state

of knowledge in genetics and genomics metabolism cell biology of infection immune evasion and vaccine design Importantly cutting edge information will also be discussed in the context of past seminal findings and future directions of research Overall this Special Topics Issue should serve as a valuable reference to colleagues and those new to the field of obligate intracellular pathogens research We welcome submission of review and mini review articles on the following topics Genome structure Development of genetic tools Molecular mechanisms of adhesion invasion and other early events in infection Establishment of the intracellular niche Niche interactions with organelles Translocation of effectors Metabolism and metabolic adaptations Gene regulation during stress response Pathogen recognition and immune evasion strategies Innate and adaptive immunity during infection Experimental models
