Osteometric Assessment of 20th Century Skeletons from Thailand and Hong Kong Christopher A. King, 1997-10 Cranial and postcranial research on East and Southeast Asians has shown population variability between and within these two regions Moreover as populations vary by sex sex differences vary by population The purpose of this study is to provide the first descriptive and comparative analysis of two recently curated samples of complete documented contemporary skeletons from Thailand N 104 and Hong Kong N 94 that have not been previously studied Sex differences reveal Hong Kong males and females as larger but less dimorphic than Thais Stepwise discriminant function analysis of the Thai humerus and femur allowed 94% 96% sex classification accuracy In conclusion this research has increased our knowledge of sex and population differences in Asia and has important applications to demographic and medicolegal investigations

New Perspectives in Forensic Human Skeletal Identification Krista E. Latham, Eric J. Bartelink, Michael Finnegan, 2017-07-27 New Perspectives in Forensic Human Skeletal Identification provides a comprehensive and up to date perspective on human identification methods in forensic anthropology Divided into four distinct sections the chapters will reflect recent advances in human skeletal identification including statistical and morphometric methods for assessing the biological profile sex age ancestry stature biochemical methods of identification DNA analysis stable isotope analysis bomb curve analysis and use of comparative radiography The final section of this book highlights advances in human identification techniques that are being applied to international populations and disaster victims The contributing authors represent established experts in forensic anthropology and closely related fields New Perspectives in Forensic Human Skeletal Identification will be an essential resource for researchers practitioners and advanced students interested in state of the art methods for human identification A comprehensive and up to date volume on human identification methods in forensic anthropology Focuses on recent advances such as statistical and morphometric methods for assessing the biological profile biochemical methods of identification and use of comparative radiography Includes an entire section on human identification techniques being applied to international populations and disaster victims
