*The University Becoming* Søren S. E. Bengtsen, Sarah Robinson, Wesley Shumar, 2021-06-23 This volume wholeheartedly engages with the current climate in higher education and provides not only a thorough analysis of the foundational elements constituting higher education but also a critical discussion of possible connections to societal and cultural domains and policy debates Today higher education institutions and programs are beset with multiple and often conflicting pressures and demands Higher education is regarded by societies in general and at the political level in particular as a pathway to securing continued economic growth and ensuring cultural growth in surrounding societal contexts Future academics are expected to become experts within their disciplines and at the same time to acquire and develop generic competences and transferable skills directly translatable into

job market and professional contexts These conflicting and fragmented policy approaches to higher education leaves academic leaders teacher researchers and students with an incoherent curriculum and a confused and eroded academic identity and societal outlook Much literature within higher education research that engages with similar topics are dominated by a backwards looking and heavy critique of current political and educational conditions for the university and higher education This volume suggests a new tack that is defined by openness and optimism towards possibilities for a transformative higher education curriculum that at the same time stays firmly rooted within the foundational academic soil By drawing on and contributing to the emerging research field the philosophy and theory of higher education the book combines critique with a constructive and future oriented approach and outlook on higher education Further it combines and links philosophical discussions on the idea of the future university with societal responsibility and a curricular and formational awareness

**Methods of Mathematical Economics** Joel N. Franklin,2013-06-29 In 1924 the firm of Julius Springer published the first volume of Methods of Mathematical Physics by Richard Courant and David Hilbert In the preface Courant says this Since the seventeenth century physical intuition has served as a vital source for mathematical problems and methods Recent trends and fashions have however weakened the connection between mathematics and physics mathematicians turning away from the roots of mathematics in intuition have concentrated on refinement and emphasized the postulational side of mathematics and at times have overlooked the unity of their science with physics and other fields In many cases physicists have ceased to appreciate the attitudes of mathematicians This rift is unquestionably a serious threat to science as a whole the broad stream of scientific development may split into smaller and smaller rivulets and dry out It seems therefore important to direct our efforts toward reuniting divergent trends by clarifying the common features and interconnections of many distinct and diverse scientific facts Only thus can the student attain some mastery of the material and the basis be prepared for further organic development of research The present work is designed to serve this purpose for the field of mathematical physics Completeness is not attempted but it is hoped that access to a rich and important field will be facilitated by the book When I was a student the book of Courant and Hilbert was my bible
