Social Cognition And Schizophrenia:

Social Cognition in Schizophrenia David L. Roberts, David L. Penn, 2012-11-21 Individuals with schizophrenia and related disorders experience significant functioning deficits in the community. The study of social cognition in schizophrenia has grown rapidly over the past decade and a consensus has developed among researchers that dysfunction in social cognition may contribute to the severe interpersonal problems that are a hallmark of schizophrenia. This has generated hope that treatments which improve social cognition in this illness may enhance an individual's ability to live a socially engaged and rewarding life. *Social Cognition in Schizophrenia: From Evidence to Treatment* provides a firm grounding in the theory and research of normal social cognition, builds on this base to describe how social cognition appears to be dysfunctional in schizophrenia, and explains how this dysfunction might be ameliorated. Composed of contributed chapters written by the top experts in the field, the volume is divided into three parts to address each of these areas. Part I: Foundations of Human Social Cognition explores normal social cognition in childhood, development, adulthood, and across cultures, as well as the brain bases of social cognition and clinical social cognition research. Part II: Social Cognition in Schizophrenia: Descriptive and Experimental Research discusses social cognition and functional outcome, emotion processing, Theory of Mind, paranoid ideation, social cognition in early psychosis, and the social cognitive neuroscience of schizophrenia. Part III: Social Cognition in Schizophrenia: Treatment Approaches focuses on findings from current treatment outcome research, as well as several leading social cognitive intervention approaches: Integrated Neurocognitive Therapy (INT), Cognitive Enhancement Therapy (CET), Metacognitive Training (MCT), and Social Cognition and Interaction Training (SCIT). This comprehensive, accessible volume will be invaluable to researchers studying social cognition and psychosocial treatment development in schizophrenia, clinicians working with this patient population, students in social and clinical psychology, nursing, social work, and occupational therapy, and medical students.

Social Cognition and Metacognition in Schizophrenia Paul Lysaker, Giancarlo Dimaggio, Martin Brüne, 2014-07-04 Deficits in social cognition and metacognition in schizophrenics makes it difficult for them to understand the speech, facial expressions, and hence emotion and intention of others, as well as allowing little insight into their own mental state. These deficits are associated with poor social skills, fewer social relationships, and are predictive of poorer performance in a work setting. *Social Cognition and Metacognition in Schizophrenia* reviews recent research advances focusing on the precise nature of these deficits, when and how they manifest themselves, what their effect is on the course of schizophrenia, and how each can be treated. These deficits may themselves be why schizophrenia is so difficult to resolve by focusing on the deficits; recovery may be quicker and long-lasting. This book discusses such deficits in early-onset, first episode, and prolonged schizophrenia; how the deficits relate to each other and to other forms of psychopathology; how the deficits affect social, psychological, and vocational functioning; and how best to treat the deficits in either individual or group settings. Summarizes the types of social cognitive and metacognitive deficits present in schizophrenia. Discusses how deficits are

related to each other and to other forms of psychopathology Describes how deficits impact function and affect the recovery process Provides treatment approaches for these deficits

Neurocognition and Social Cognition in Schizophrenia

Patients V. Roder,A. Medalia,2013-03-07 Research shows that neuro and social cognition have a decisive influence on functional outcome in people with schizophrenia In this publication world renowned experts summarize the latest research on approaches to assessing and treating cognition in schizophrenia The book is organized to take the reader through the steps from definitions and assessment of cognition to research on the relevance of cognition in everyday life to chapters which focus on treatments for cognitive disorders The reader will learn about the NIMH MATRICS initiative which has provided clinicians and researchers with the tools to define and assess neuro and social cognitive functioning in people with schizophrenia Then the treatments for neuro and social cognitive deficits are discussed in several chapters which give an overview of cognitive remediation approaches accompanied by concrete treatment examples The reader will also learn about the latest results of pharmacological interventions for cognitive deficits A final chapter focuses on the importance of addressing motivational deficits when treating cognition and offers treatment approaches to enhance motivation This publication is essential reading for clinicians and researchers in the fields of psychiatry psychology as well as students and other professions working with people who have schizophrenia

Social Cognition in Psychosis Kathryn Eve

Lewandowski,Ahmed Moustafa,2019-04-13 Social Cognition in Psychosis combines current research on phenotypes neurobiology and existing evidence on the assessment and treatment of various forms of psychoses The book presents various treatment options including assessment approaches tools and training methods that aid in the rehabilitation of patients with psychotic disorders Social cognition is a set of psychological processes related to understanding recognizing processing and appropriately using social stimuli in one s environment Individuals with psychotic disorders consistently exhibit impairments in social cognition As a result social cognition has been an important target for intervention with recent efforts trying to enhance early recovery among individuals with psychotic disorders

Exploring Social Cognition and Mirror Systems in Schizophrenia and Bipolar Disorder

Sophie Claire Andrews,2013 Schizophrenia and bipolar disorder show some overlap in genetics epidemiology and clinical features Individuals with these disorders often have poor social and vocational functional outcomes and reduced quality of life even during times of symptom remission Social cognition comprises a number of processes including emotion recognition empathy and theory of mind ToM and recent research has indicated that these skills may be reduced in schizophrenia and bipolar disorder and contribute to their reduced function Despite this the exact nature of these social cognitive deficits their impact on quality of life and possible underlying neural substrates have not yet been established in these disorders One brain network implicated in social cognition is the mirror system however research into this system in schizophrenia or bipolar disorder has been very limited to date The goal of this thesis was to better understand the nature and impact of social

cognitive deficits in schizophrenia and euthymic bipolar disorder and comprehensively assess mirror system function as a possible contributor to these deficits In this thesis I first assessed a number of aspects of social cognition emotion recognition empathy and ToM as well as cognitive clinical and quality of life variables in a schizophrenia euthymic bipolar disorder and healthy control group The three groups were then compared using two putative measures of mirror system function EEG and TMS I found a significant reduction in cognitive ToM in both disorders with the addition of a deficit in the recognition of anger in the schizophrenia sample indicating some likely shared underlying brain pathology but also disorder specific differences Quality of life was not related to these social cognitive deficits in this sample possibly due to other mediating factors There was some evidence for underactive mirror systems in euthymic bipolar disorder but not schizophrenia however mirror system function was not strongly related to any of the social cognitive measures utilised in this study The findings of this thesis make a valuable contribution to the understanding of social cognition in schizophrenia and bipolar disorder and challenge the proposed importance of mirror systems for social cognition Our findings indicate that social cognitive deficits should be considered in assessment and treatment planning in schizophrenia and bipolar disorder In addition this thesis highlights the need for further research aimed at understanding the neurobiology and true impact of social cognitive deficits It is hoped that this knowledge will lead to better treatments targeting these deficits at both neurophysiological and behavioural levels and ultimately improve patient outcomes and wellbeing

Emotion and Social Cognition in Schizophrenia
Syvan Shur,2010-01 Although impairments in social functioning are one of the prominent symptoms of schizophrenia there is little agreement regarding the causes and components of these deficits This book examines this issue from a social cognitive approach suggesting empathy and its related abilities such as Theory of Mind and cognitive flexibility as core factors affecting the patients social competence These factors are further discussed in relation to their link to prefrontal brain areas and their role in Schizophrenia The data showed here suggests that an account of the behavioral impairment accompanying schizophrenia that excludes the role of emotion is insufficient Normal social lives and adaptive responses are likely to require constant integration between cognitive and affective components

Association Between Neurocognition and Social Cognition in a Sample of People with Schizophrenia Spectrum Disorders Roberto Mediavilla,2017 Title Association between neurocognition and social cognition in a sample of people with schizophrenia spectrum disorders Objectives To check if neurocognition and social cognition are linked in a sample of people with schizophrenia spectrum disorder to tailor clinical interventions Background Neurocognition and social cognition are domains often affected in schizophrenia spectrum disorders SSDs Green et al 2015 Bora et al 2017 Despite the important number of psychological interventions addressing them Grant et al 2017 Cella et al 2017 it is still not clear if neurocognition and social cognition are associated or what their functional implications are Mehta et al 2013 Schmidt et al 2011 Materials and Methods A sample of 25 participants with schizophrenia and schizoaffective disorders was included They were assessed within one week in September 2018 Social cognition

measures were taken according to the recommendations of the Social Cognition Psychometric Evaluation SCOPE panel Theory of mind was measured with the short version of the Hinting Task and with the Reading the Mind in the Eyes Test RMET Attributional Style was measured with the Attribution of Intentions and Hostility Questionnaire AIHQ Assessment of neurocognition was made with the Screen for Cognitive Impairment in Psychiatry SCIP S Results and Conclusions Results are shown in Figure 1 Higher levels of neurocognition were associated with higher emotional theory of mind and with lower hostile attributions Neurocognition and cognitive theory of mind were not correlated These results suggest that neurocognition and social cognition are linked in SSDs Further each domain of social cognition seems to be partly independent from another Clinical interventions should combine both cognitive remediation and social cognition training

Do Results Of Different Social Cognitive Tests In Schizophrenia Predict Each Other? D. C. D'Souza, 2017 Objectives The main objective of this study is to determine whether three different measures of social cognition predict each other in schizophrenia and healthy controls Background Social cognition SC is impaired in schizophrenia and related to the disability of the illness Thus SC is an important target for schizophrenia treatment Treating SC can improve community functioning¹ However social cognition is not well understood and there are on going discussions in the literature about how to dissect and measure SC^{2 3} The Social Cognition Psychometric Evaluation SCOPE study has classified social cognition into four areas emotion processing social perception theory of mind and attributional style and then systematically evaluated the psychometric properties of many SC measures⁴ SCOPE has classified the Bell Lysaker Emotion Recognition Task BLERT⁵ as a test of emotion processing the mini Profile of Nonverbal Sensitivity miniPONS⁶ as a test of social perception and the emotional management component Mayer Salovey

Caruso Emotional Intelligence Test MSCEIT 7 as a test of emotion regulation We wanted to determine whether performance on these three SC measures is correlated in schizophrenia and healthy individuals and how they relate to neurocognitive measures

Methods Stable adult outpatients ages with schizophrenia SZ n 29 and adults HC n 22 without personal or family history of psychiatric illness were given three tests of social cognition the Bell Lysaker Emotion Recognition Task BLERT the mini Profile of Nonverbal Sensitivity mini PONS and the Mayer Salovey Caruso Emotional Intelligence Test MSCEIT The MATRICS Consensus Cognitive Battery was given Test results were compared with Spearman and partial correlations

Results Scores from the BLERT and the miniPONS were correlated with each other and neither test's results correlated with that of the MSCEIT in patients with schizophrenia In healthy controls no correlations between the three measures were found Though performance in several neurocognitive domains was correlated with all social cognition measures in schizophrenia the strong correlation between BLERT and miniPONS performance remained after controlling for neurocognitive performance

Conclusions and Future Directions BLERT and miniPONS performance correlates in a sample of adults with schizophrenia but the emotional management component of the MSCEIT does not correlate with either These correlations were not present in the sample of healthy control participants Social cognition and neurocognition are correlated in our SZ sample Further studies in larger samples well controlled for gender age and education with more social cognitive measures may reveal whether the structure of social cognition is different in schizophrenia compared to healthy controls

Impairments in social functioning are among the hallmark characteristics of schizophrenia These deficits predict relapse rate and may be independent of better studied symptoms such as hallucinations Additionally studies indicate that social functioning is one of the most important domains for individuals with schizophrenia many of whom consider social functioning to be a key area of unmet need Social Cognition and Interaction Training SCIT is a group psychotherapy for individuals with schizophrenia and other psychotic disorders Social cognition refers to the thinking processes that people use to navigate the social world Deficits in social cognition hinder

people with schizophrenia and other mental illnesses from living meaningful socially connected lives The SCIT Clinician Guide provides comprehensive instruction for mental health professionals to enhance social cognition and promote rewarding social lives for their clients SCIT is appropriate for adults suffering from psychotic illness and who have interpersonal difficulties as a result SCIT is particularly appropriate for individuals with symptoms of suspiciousness and paranoia The authors summarize the rationale and theoretical underpinnings of SCIT distinguish it from other treatments for psychosis provide an overview of the intervention explain the links between the intervention activities and the underlying theoretical model and describe SCIT implementation session by session SCIT is a 20 to 24 week group based treatment that can be delivered by mental health clinicians of all levels in a wide range of community and hospital settings SCIT uses exercises games discussion formats and interactive social stimuli to target and improve specific areas of social cognitive dysfunction and includes user friendly tips and handouts for clients It also provides web access to a library of videos images and slide shows that are used to bring the SCIT training sessions to life

TIME OF RESPONSE AND SOCIAL COGNITION IN SCHIZOPHRENIA: A COMPARATIVE STUDY Alicia Ruiz Toca, 2017

Introduction Neurocognitive deficits in information processing are a global and primary aspect of schizophrenia that affects global functioning and social skills However there are still few studies that explain the influence of processing speed as a mediating variable in emotional processing

Objectives To analyze the relationship between social cognition and processing speed in people with schizophrenia

Methods A sample of 90 outpatients diagnosed with schizophrenia DSM 5 criteria and 100 healthy subjects between 18 and 65 years old were recruited Sociodemographic variables clinical variables measured by Positive and Negative Syndrome Scale PANSS cognitive variables as processing speed measured by Trail Making Test TMT symbol coding BACS verbal fluency animals and social cognition SC measured by Movie Assessment Social Cognition MASC were measured

Results The group of patients with schizophrenia showed a poorer performance in social cognition and processing speed Processing speed significantly improved hits in MASC test with a marked group effect The patients groups showed a shorter response time in MASC that was associated with more correct answers $P = 2.24 \times 10^{-28}$ There were no significant effects of the symptoms

Conclusions The relationship between SC and processing speed suggests that slowing down the processes to identify and integrate the available information may produce an inadequate social response that is not mediated by the effect of the symptoms

Future studies should replicate the findings of the present study
