Biology and Emotion Neil McNaughton,1989-07-13 There have been rapid and important advances in all behavioural sciences in recent years These advances have in one sense been very diverse and specialised sufficiently so for a scientist to quickly lose touch with the current concerns of even neighbouring researches but in some cases the developments have seemed also to be fundamental and perhaps convergent with implications across a range of disciplines In either case there is a real and increasing need for scientists to communicate their discoveries and to a new generation of students in their own Problems in the Behavioural Sciences is designed to meet this need The books are by leading researchers and deal with problems or topics that are attracting a special current interest The central subject matter is psychology but many of the issues will need to be pursued across existing and fluid boundaries between psychology and other behavioural sciences like physiology pharmacology sociology ethology and linguistics The central idea of this book is that biology and particularly evolution provides the best starting point for the study of emotion In particular it is argued that all the conventional properties of emotion such as expression feeling and motivation can be considered in a scientific manner and useful conclusions drawn therefrom The major part of the book involves the application of this central idea to a wide variety of the phenomena of emotion The resultant review should be useful as an undergraduate text and so explanations in the text are aimed at the non specialist At the same time the specific conclusions drawn in the book should be of interest to all those who do research on emotion and particularly those who need a solid framework on which to base interdisciplinary studies Biology and Emotion differs from the majority of books in the field in that it does not present a specific theory of emotion The material covered is therefore more general than is often the case and has not been selected to support a particular point of view It combines an organised yet artheoretical approach with coverage of both animal and human emotions

Rationality of Emotion Ronald De Sousa, 1990-03-14 In this urbane and witty book Ronald de Sousa disputes the widespread notion that reason and emotion are natural antagonists He argues that emotions are a kind of perception that their roots in the paradigm scenarios in which they are learned give them an essentially dramatic structure and that they have a crucial role to play in rational beliefs desires and decisions by breaking the deadlocks of pure reason The book's twelve chapters take up the following topics alternative models of mind and emotion the relation between evolutionary physiological and social factors in emotions a taxonomy of objects of emotions assessments of emotions for correctness and rationality the regulation by emotions of logical and practical reasoning emotion and time the mechanism of emotional self deception the ethics of laughter and the roles of emotions in the conduct of life There is also an illustrative interlude in the form of a lively dialogue about the ideology of love jealousy and sexual exclusiveness A Bradford Book **Emotions as Bio-cultural**

Practitioner's Guide to Emotion Regulation in School-Aged Children Gayle L.

Macklem,2007-12-03 Emotion regulation skills should be mastered by early childhood but many enter school with deficits that may not have been addressed effectively or early enough This vital new text presents in depth background and practical information on the subject so school professionals can craft interventions that are developmentally appropriate and timely It also offers practical tools that can be taught to children and shared with parents and teachers The Psychobiology of Emotions Jack George Thompson,2013-06-29 Regardless of culture most adult humans report experiencing similar feelings such as anger fear humor and joy Such subjective emotional states however are not universal Members of some cultures deny experiencing specific emotions such as fear or grief Moreover within any culture individuals differ widely in their self reports of both the variety and intensity of their emotions Some people report a vivid tapestry of positive and negative emotional experiences Other people report that a single emotion such as depression or fear totally dominates their existences Still others report flat and barren emotional lives Over the past 100 years scientists have proposed numerous rival explanations of why such large individual differences in emotions occur Various authors have offered anthropological biochemical ethological neurological psychological and sociological models of human emotions Indeed the sheer number of competing theories precludes a comprehensive review in a single volume Accordingly only a representative sample of models are discussed in this book and many equally important theories have been omitted These omissions were not intended to prejudice the reader in favor of any particular conceptual framework Rather this selective coverage was intended to focus attention upon the empirical findings that contemporary theories attempt to explain The Biological Basis of Mental Health Nursing William T. Nofsinger,Corey A. Shank,2020-03-30 Why do people's financial and economic preferences vary so widely Nurture variables such as socioeconomic factors partially explain these differences but scientists have been discovering that nature also plays an important role This is the first book to bring together these scientific insights for a holistic view of the

role of human biology in financial decision making Geneticists are now examining which genetic markers are associated with financial and economic preferences Neuroscientists are now determining where in the brain financial decisions are made and how that varies between people Endocrinologists relate the level of different hormones circulating in the body to financial risk taking Researchers are exploring how physiology and environmental conditions influence investment decisions and how three types of cognitive ability play essential roles in investment success This exciting and relevant work being done in these academic silos has generally not been transmitted among the scientific areas or to industry For the first time this book integrates all these areas explaining the myriad ways in which a person s biology influences their investing decisions Financial analysts advisors market participants and upper level undergraduate and postgraduate students of behavioral finance behavioral economics and investing will find this book invaluable enabling a deeper understanding of investors decision making processes To further ensure this new material is accessible to students PowerPoint slides are available online for instructors use
