Starch

Yasunori Nakamura,2015-05-07 This book provides a detailed overview of the current understanding of the metabolic system of starch biosynthesis and degradation in plants The focus is on new topics regarding the functional interaction between multiple enzymes and the initiation process of starch biosynthesis which are essential for further understanding of related metabolic features The book also explains and discusses the distinct structures of amylopectin and amylose and the crystalline structure of starch granules At the same time readers will be made aware of areas where further research remains to be done such as the regulation of starch metabolism the fine structure of starch molecules and the manipulation of the structure and functional properties of starch by genetic and molecular technology Also described are aspects of the biosynthetic machinery of starch the structure and metabolism of which have developed and been refined during the process of plant evolution In addition recent approaches to producing novel starches with distinct physicochemical and functional properties in gene modified mutants and transgenic plants for industrial applications are introduced Finally the book

elaborates on the unresolved topics necessary approaches and future prospects to achieve a complete understanding of the regulation of starch metabolism This volume is of great value for general scientists students and anyone wishing to understand the specific and complicated events of starch metabolism and biotechnology It will be especially useful for food scientists and engineers in academia and industry Cell Membranes E. Elson,W. Frazier,L. Glaser,2012-12-06 This volume assembles reviews on topics in two major related areas One of these concerns the interactions of cells with substrata and with other cells which are mediated by the extracellular matrix and soluble molecules As described in this volume these interactions are responsible for controlling cell functions ranging from embryogenesis and neural development to blood clotting More over important properties of the extracellular matrix can be modulated by the interdependent actions of tumor cells and fibroblasts The other major area of interest concerns the response of cells to extracellular signals Recent work has begun to reveal how a remarkable diversity of cellular functions including neuronal proliferative membrane cytoskeletal and many other kinds of re sponses are elicited through the mediation of a relatively small and interdepen dent set of second messenger systems These include both changes in cytoplasmic ionic balances and activation of various kinds of protein kinases Both subjects are covered in this volume The two areas are linked by the common theme of cellular response to an external environment that is sensed through cellular interactions with informational molecules which are soluble agents as well as those that are components of insoluble matrices It is only recently that we have come to appreciate the complex interplay between the matrix surrounding a cell and the cell s response to hormones and growth factors Thus we have tried to select examples in which this type of extracellular integration may playa role Abiotic Stress Tolerance Mechanisms in Plants Gyanendra Kumar Rai,Ranjeet Ranjan Kumar,Sreshti Bagati,2021-02-14 Since recent years the population across the globe is increasing expeditiously hence increasing the agricultural productivity to meet the food demands of the thriving population becomes a challenging task Abiotic stresses pose as a major threat to agricultural productivity Having an adequate knowledge and apprehension of the physiology and molecular biology of stress tolerance in plants is a prerequisite for counteracting the adverse effect of such stresses to a wider range This book deals with the responses and tolerance mechanisms of plants towards various abiotic stresses The advent of molecular biology and biotechnology has shifted the interest of researchers towards unraveling the genes involved in stress tolerance More effort is being made to understand and pave ways for developing stress tolerance mechanisms in crop plants Several technologies including Microarray technology functional genomics on gel and off gel proteomic approaches have proved to be of utmost importance by helping the physiologists molecular biologists and biotechnologists in identifying and exploiting various stress tolerance genes and factors for enhancing stress tolerance in plants This book would serve as an exemplary source of scientific information pertaining to abiotic stress responses and tolerance mechanisms towards various abiotic stresses Note T F does not sell or distribute the Hardback in India Pakistan Nepal Bhutan Bangladesh and Sri Lanka **Abiotic Stress Signaling in Plants:**

Functional Genomic Intervention, Volume II Girdhar Kumar Pandey, Ashish Kumar Srivastava, Amita Pandey, Maik Böhmer, 2024-01-31 This Research Topic is part of the Abiotic Stress Signaling in Plants Functional Genomic Intervention series Abiotic Stress Signaling in Plants Functional Genomic Intervention Abiotic stresses such as high temperature low temperature drought and salinity limit crop productivity worldwide Understanding plant responses to these stresses is essential for rational engineering of crop plants In Arabidopsis the signal transduction pathways for abiotic stresses light several phytohormones and pathogenesis have been elucidated A significant portion of plant genomes most studies are Arabidopsis and rice genome encodes for proteins involves in signaling such as receptor sensors kinases phosphatases transcription factors and transporters channels Despite decades of physiological and molecular effort knowledge pertaining to how plants sense and transduce low and high temperature low water availability drought water submergence and salinity signals is still a major question before plant biologist One major constraint hampering our understanding of these signal transduction processes in plants has been the lack or slow pace of application of molecular genomic and genetics knowledge in the form of gene function Drug Discovery Research Ziwei Huang, 2007-05-23 Post Genomics Drug Discovery and

Research explores and discusses some of the most important topics in post genomics life and biopharmaceutical sciences It provides an introduction to the field outlining examples of many techniques currently used as well as those still under development which are important for the research of biopharmaceutical discovery in the post genomics era Integrates several developing and cutting edge technologies and methods like bioinformatics experimental therapeutics and molecular recognition Includes discussion on topics such as computer aided ligand design peptide and protein chemistry and synthesis synthesis of active natural products and the use of emerging technologies like proteomics nanotechnology or bioengineering
