## **Smarandache Nearrings:**

**Smarandache Near-Rings** W. B. Vasantha Kandasamy, 2002 Generally in any human field a Smarandache Structure on a set  $A$  means a weak structure  $W$  on  $A$  such that there exists a proper subset  $B$  in  $A$  which is embedded with a stronger structure  $S$ . These types of structures occur in our everyday life that's why we study them in this book. Thus as a particular case a Near Ring is a non empty set  $N$  together with two binary operations and such that  $N$  is a group not necessarily abelian.  $N$  is a semigroup. For all  $a, b, c$  in  $N$  we have  $a(bc) = (ac)b$ . A Near Field is a non empty set  $P$  together with two binary operations and such that  $P$  is a group not necessarily abelian.  $P \setminus \{0\}$  is a group. For all  $a, b, c \in P$  we have  $a(bc) = (ac)b$ . A Smarandache Near ring is a near ring  $N$  which has a proper subset  $P$  in  $N$  where  $P$  is a near field with respect to the same binary operations on  $N$ .

**Bialgebraic Structures and Smarandache Bialgebraic Structures** W. B. Vasantha Kandasamy, 2003-01-01 Generally the study of algebraic structures deals with the concepts like groups, semigroups, groupoids, loops, rings, near rings, semirings and vector spaces. The study of bialgebraic structures deals with the study of bistructures like bigroups, biloops, bigroupoids, bisemigroups, birings, binear rings, bisemirings and bivector spaces. A complete study of these bialgebraic structures and their Smarandache analogues is carried out in this book. For example, a set  $S$  with two binary operations and is called a bisemigroup of type II if there exists two proper subsets  $S_1$  and  $S_2$  of  $S$  such that  $S = S_1 \cup S_2$  and  $S_1$  is a semigroup,  $S_2$  is a semigroup. Let  $S$  be a bisemigroup. We call  $S$  a Smarandache bisemigroup if  $S$  has a proper subset  $P$  such that  $P$  is a bigroup under the operations of  $S$ . Let  $L$  be a non empty set with two binary operations.  $L$  is said to be a biloop if  $L$  has two nonempty finite proper subsets  $L_1$  and  $L_2$  of  $L$  such that  $L = L_1 \cup L_2$  and  $L_1$  is a loop,  $L_2$  is a loop or a group. Let  $L$  be a biloop, we call  $L$  a Smarandache biloop if  $L$  has a proper subset  $P$  which is a bigroup. Let  $G$  be a non empty set. We call  $G$  a bigroupoid if  $G = G_1 \cup G_2$  and satisfies the following:  $G_1$  is a groupoid, i.e. the operation is non associative,  $G_2$  is a semigroup. Let  $G$  be a non empty set with  $G = G_1 \cup G_2$ , we call  $G$  a Smarandache bigroupoid if  $G_1$  and  $G_2$  are distinct proper subsets of  $G$  such that  $G = G_1 \cup G_2$ , neither  $G_1$  nor  $G_2$  are included in each other,  $G_1$  is a S groupoid,  $G_2$  is a S semigroup. A nonempty set  $R$  with two binary operations and is said to be a biring if  $R = R_1 \cup R_2$  where  $R_1$  and  $R_2$  are proper subsets of  $R$  and  $R_1$  is a ring,  $R_2$  is a ring. A Smarandache biring is a non empty set with two binary operations and such that  $R = R_1 \cup R_2$  where  $R_1$  and  $R_2$  are proper subsets of  $R$  and  $R_1$  is a S ring,  $R_2$  is a S ring.

**Smarandache Fuzzy Algebra** W. B. Vasantha Kandasamy, 2003 The author studies the Smarandache Fuzzy Algebra which like its predecessor Fuzzy Algebra arose from the need to define structures that were more compatible with the real world where the grey areas mattered not only black or white. In any human field a Smarandache  $n$  structure on a set  $S$  means a weak structure  $w_0$  on  $S$  such that there exists a chain of proper subsets  $P_{n-1}$  in  $P_{n-2}$  in  $\dots$  in  $P_2$  in  $P_1$  in  $S$  whose corresponding structures verify the chain  $w_{n-1}$  includes  $w_{n-2}$  includes  $\dots$  includes  $w_2$  includes  $w_1$  includes  $w_0$  where includes signifies strictly stronger, i.e. structure satisfying more axioms. This book is referring to a Smarandache 2 algebraic

structure two levels only of structures in algebra on a set  $S$  i.e a weak structure  $w_0$  on  $S$  such that there exists a proper subset  $P$  of  $S$  which is embedded with a stronger structure  $w_1$  Properties of Smarandache fuzzy semigroups groupoids loops bigroupoids biloops non associative rings birings vector spaces semirings semivector spaces non associative semirings bisemirings near rings non associative near ring and binear rings are presented in the second part of this book together with examples solved and unsolved problems and theorems Also applications of Smarandache groupoids near rings and semirings in automaton theory in error correcting codes and in the construction of  $S$  subbiautomaton can be found in the last chapter

**Smarandache Neutrosophic Algebraic Structures** W. B. Vasantha Kandasamy, 2006-01-01 Smarandache algebraic structures that inter relates two distinct algebraic structures and analyzes them relatively can be considered a paradigm shift in the study of algebraic structures For instance the algebraic structure Smarandache semigroup simultaneously involves both group and semigroup Recently Neutrosophic Algebraic Structures were introduced This book ventures to define Smarandache Neutrosophic Algebraic Structures Here Smarandache neutrosophic structures of groups semigroups loops and groupoids and their  $N$  ary structures are introduced and analyzed There is a lot of scope for interested researchers to develop these concepts Smarandache Special Definite Algebraic Structures W. B. Vasantha Kandasamy, 2009-01-01 We

study these new Smarandache algebraic structures which are defined as structures which have a proper subset which has a weak structure A Smarandache Weak Structure on a set  $S$  means a structure on  $S$  that has a proper subset  $P$  with a weaker structure By proper subset of a set  $S$  we mean a subset  $P$  of  $S$  different from the empty set from the original set  $S$  and from the idempotent elements if any A Smarandache Strong Structure on a set  $S$  means a structure on  $S$  that has a proper subset  $P$  with a stronger structure A Smarandache Strong Weak Structure on a set  $S$  means a structure on  $S$  that has two proper subsets  $P$  with a stronger structure and  $Q$  with a weaker structure **Smarandache Notions, Vol. 14** W. Kandasamy, Florentin Smarandache, 2006-01-01 This book for the first time introduces neutrosophic groups neutrosophic  
 semigroups neutrosophic loops and neutrosophic groupoids and their neutrosophic N structures The special feature of this  
 book is that it tries to analyze when the general neutrosophic algebraic structures like loops semigroups and groupoids  
 satisfy some of the classical theorems for finite groups viz Lagrange Sylow and Cauchy This is mainly carried out to know  
 more about these neutrosophic algebraic structures and their neutrosophic N algebraic structures *Introduction to  
 neutrosophic Nnearrings* S. A. Akinleye, E. O. Adeleke, A. A. A. Agboola, The objective of this paper is to introduce the  
 concept of neutrosophic nearrings The concept of neutrosophic N group of a neutrosophic nearring is introduced We study  
 neutrosophic subnearrings of neutrosophic nearrings and also neutrosophic N subgroups of neutrosophic N groups

*Algebraic Structures on Fuzzy Unit Square and Neutrosophic Unit Square* W. B. Vasantha Kandasamy, Florentin  
 Smarandache, 2014 In this book authors build algebraic structures on fuzzy unit semi open square  $UF(a, b)$  with  $a, b \in [0, 1]$  and  
 on neutrosophic unit semi open square  $UN(a, b)$  with  $a, b \in [0, 1]$  As distributive laws are not true we are not in a position to  
 develop several properties of rings semirings and linear algebras Seven open conjectures are proposed *Algebraic*

*Structures on Finite Complex Modulo Integer Interval  $C([0, n])$*  W. B. Vasantha Kandasamy, Florentin  
 Smarandache, 2014-09-16 In this book authors introduce the notion of finite complex modulo integer intervals Finite complex  
 modulo integers was introduced by the authors in 2011 Now using this finite complex modulo integer intervals several  
 algebraic structures are built **N-Algebraic Structures** W. B. Vasantha Kandasamy, Florentin Smarandache, 2005-01-01

In this book for the first time we introduce the notions of N groups N semigroups N loops and N groupoids We also define a  
 mixed N algebraic structure The book is organized into six chapters The first chapter gives the basic notions of S semigroups  
 S groupoids and S loops thereby making the book self contained Chapter two introduces N groups and their Smarandache  
 analogues In chapter three N loops and Smarandache N loops are introduced and analyzed Chapter four defines N groupoids  
 and S N groupoids Since the N semigroup structures are sandwiched between groups and groupoids the study can be carried  
 out without any difficulty Mixed N algebraic structures and S mixed algebraic structures are given in chapter five Some  
 problems are suggested in chapter six It is pertinent to mention that several exercises and problems Some in the form of  
 proof to the theorems are given in all the chapters A reader who attempts to solve them will certainly gain a sound  
 knowledge about these concepts We have given 50 problems for the reader to solve in chapter 6 The main aim of this book is  
 to introduce new concepts and explain them with examples there by encouraging young mathematics to pursue research in

this direction Several theorems based on the definition can be easily proved with simple modification Innovative readers can take up that job Also these notions find their applications in automaton theory and coloring problems The  $N$  semigroups and  $N$  automaton can be applied to construct finite machines which can perform multitasks so their capability would be much higher than the usual automaton of finite machines constructed We have suggested a list of references for further reading
