Sky Atlas :

The Sky Atlas Edward Brooke-Hitching, 2019-10-17 After the enormous international success of *The Phantom Atlas* and *The Golden Atlas* Edward Brooke Hitching's stunning new book unveils some of the most beautiful maps and charts ever created during mankind's quest to map the skies above us. This richly illustrated treasury showcases the finest examples of celestial cartography, a glorious genre of map making often overlooked by modern map books as well as medieval manuscripts, masterpiece paintings, ancient star catalogues, antique instruments and other appealing curiosities. This is the sky as it has never been presented before: the realm of stars and planets but also of gods, devils, weather wizards, flying sailors, medieval aliens, mythological animals and rampaging spirits. The reader is taken on a tour of star-obsessed cultures around the world, learning about Tibetan sky burials, star-covered Inuit dancing coats, Mongolian astral prophets and Sir William Herschel's 1781 discovery of Uranus, the first planet to be found since antiquity. Even stranger are the forgotten stories from European history like the English belief of the Middle Ages in ships that sailed a sea above the clouds, 16th century German UFO sightings and the Edwardian aristocrat who mistakenly mapped alien-made canals on the surface of Mars. As the intricacies of our universe are today being revealed with unprecedented clarity, there has never been a better time for a highly readable book as beautiful as the night sky to contextualise the scale of these achievements for the general reader.

Night Sky Atlas Robin Scagell, 2012 For observers with binoculars or small telescopes. Cover **Night Sky Atlas** Robin Scagell, 2004 DK's *Night Sky Atlas* takes us on an amazing journey of discovery from sparkling star clusters to spectacular supernovas. Hundreds of stunning photographs capture and explain our incredible night sky, illuminating stars, constellations, the Solar System and beyond. With the help of charts, maps and see-through pages, you can find out how to spot Orion wherever you are in the world, when to see a shooting star and much, much more. Fact boxes, monthly sky guides and information-packed captions explain key aspects of astronomy, with special features on mysterious phenomena such as eclipses, nebulae and comets. Complete with useful glossary and index, the *Night Sky Atlas* is an ideal resource for all stargazers. **Philip's Night Sky Atlas** Robin Scagell, 2016-05 Fully revised and now in its third edition, Philip's *Night Sky Atlas* is a highly practical star atlas that can be used anywhere in the world and at any time of the year. With a sturdy, damp-proof binding, it is the ideal choice for the backyard astronomer using binoculars or a small telescope. It contains all the maps you need to learn your way around the night sky, whether you want to find remote galaxies, sketch lunar craters or make estimates of variable stars. Author Robin Scagell explains what you can see, what equipment if any you will need and how to make the most of your time under the stars. The star maps are by Wil Tirion, the world-renowned celestial cartographer. The eight sky maps together show the whole of the night sky. Stars down to magnitude 5.5 are marked together with the brighter, deep sky objects. They are drawn on a white background so that you can add your own pencil notes or observations to the maps. Opposite each of the sky maps is a photo-realistic version of the same map. In addition, constellation maps show

numerous deep sky targets with interesting objects described in detail A Moon map split into quadrants is accompanied by suggestions of what to look for with images of the most interesting features The author also describes how to observe and record the planets the Sun meteors eclipses comets and deep sky objects *Atlas of Science* Katy Börner,2010-09-17

Jenkins, 2015-07-28 Amateur astronomers who have been disappointed by the results of an observing session can take comfort in the guidance of this book which advises how to still gain useful experience in seemingly failed nights at the telescope In a world with imperfect seeing conditions incredible observing sessions are often mixed with less inspiring ones discouraging the amateur observer This book is designed to minimize subsequent disappointment for astronomers who encounter a few bad observing sessions helping novice observers take something worthwhile away each and every time they go out under the night sky regardless of the observations that were originally planned Almost every observer remembers his first sight of ringed Saturn hanging in the blackness of space Practitioners agree that there is something special about visual observing Real time observations at the eyepiece can provide fleeting yet intense feelings that connect us with the universe in unique ways But when expectations aren't met at the eyepiece there are other ways to profit from the practice of astronomy These rewards though less showy are well worth cultivating This is a book that will help the reader see what constitutes a successful visual observing session It explains the nature of the objects that the observer is seeing and advises how best to use their equipment There are many hints and tips about how best to locate recall and record observations including suggestions for trips to areas where there are dark skies and to public observatories Amateur astronomy is a journey from the urban backyard all the way to dark rural skies and with this guide the journey can be smooth Exploring the Universe: A Laboratory Guide for Astronomy Mike D. A. C. Perryman,2009 The Hipparcos satellite developed and launched by the European Space Agency ESA in 1989 was the first space mission dedicated to astrometry the accurate measurement of positions distances and proper motions of stars Amongst the key achievements of its measurements are refining the cosmic distance scale characterizing the large scale kinematic

motions in the Solar neighborhood providing precise luminosities for stellar modelling and confirming Einstein's prediction of the effect of gravity on starlight. This authoritative account of the Hipparcos contributions over the last decade is an outstanding reference for astronomers, astrophysicists and cosmologists. It reviews the applications of the data in different areas describing the subject and the state of the art before Hipparcos and summarizing all major contributions to the topic made by Hipparcos. It contains a detailed overview of the Hipparcos and Tycho Catalogues, their annexes and their updates. Each chapter ends with comprehensive references to relevant literature.

Greek Gods and Goddesses John Green, Drew Silver, 2001-01-01. The ancient Greeks worshipped a host of gods and goddesses. Preserved today in poetry, art and mythology, these divine beings were part of a religious pantheon from which worshippers sought health, good crops and deliverance from enemies. This collection of mythical figures introduces youngsters to Greek mythology in an appealing way to fans of all ages.

Classic Starts®: Roman Myths Diane Namm, 2014-01-07. Several of the best-loved Roman myths are gathered in this one beautiful abridged collection from Romulus and Remus which tells how Rome came to be, to Cupid and Psyche, Oedipus and the Sphinx and more. For easy reference, there's also a detailed list and family tree of all the important gods and goddesses right at the start.

Astronomy with Schmidt-Type Telescopes M. Capaccioli, 2012-12-06. The idea of holding a colloquium on Schmidt telescopes, techniques and science originated from the observation that in the last ten years and in spite of the remarkable developments and achievements in this field of astronomical research, there had been no specific opportunity for the experts to meet together, make the point on the state of the art, discuss and coordinate future plans. Therefore Prof. L. Rosino, one of the pioneers in the use of wide field telescopes, driven also by the wish of honouring the over four decades of activity of the Asiago Observatory, proposed to the Executive Committee of the International Astronomical Union to sponsor a colloquium on Astronomy with Schmidt type telescopes, to be held at Asiago at the end of the summer of 1983. Details about the composition of the Scientific Organizing Committee and the sponsoring organizations are given in Prof. Rosino's Welcome to the Participants. The granting of this proposal was the beginning of a number of headaches for the members of the Local Organizing Committee: R. Barbon, F. Ciatti, P. Rafanelli and myself. If organization-wise the colloquium was successful, this is truly due to the generous efforts of my colleagues of the SOC and to the efficient organization of the Linta Park, the hotel hosting the meeting.
