Smooth Quasigroups And Loops:

Smooth Quasigroups and Loops L. Sabinin,2012-12-06 During the last twenty five years quite remarkable relations between nonas sociative algebra and differential geometry have been discovered in our work Such exotic structures of algebra as quasigroups and loops were obtained from purely geometric structures such as affinely connected spaces The notion ofodule was introduced as a fundamental algebraic invariant of differential geometry For any space with an affine connection loopuscular odular and geodular structures partial smooth algebras of a special kind were introduced and studied As it happened the natural geodular structure of an affinely connected space allows us to reconstruct this space in a unique way Moreover any smooth ab stractly given geodular structure generates in a unique manner an affinely connected space with the natural geodular structure isomorphic to the initial one The above said means that any affinely connected in particular Riemannian space can be treated as a purely algebraic structure equipped with smoothness Numerous habitual geometric properties may be expressed in the language of geodular structures by means of algebraic identities etc Our treatment has led us to the purely algebraic concept of affinely connected in particular Riemannian spaces for example one can consider a discrete or even finite space with affine connection in the form ofgeodular structure which can be used in the old problem of discrete space time in relativity essential for the quantum space time theory

Quantum Lie Theory Vladislav Kharchenko,2015-12-24 This is an introduction to the mathematics behind the phrase quantum Lie algebra The numerous attempts over the last 15 20 years to define a quantum Lie algebra as an elegant algebraic object with a binary quantum Lie bracket have not been widely accepted In this book an alternative approach is developed that includes multivariable operations Among the problems discussed are the following a PBW type theorem quantum deformations of Kac Moody algebras generic and symmetric quantum Lie operations the Nichols algebras the Gurevich Manin Lie algebras and Shestakov Umirbaev operations for the

[Topological Fixed Point Theory of Multivalued Mappings](#) Lech Górniewicz,2013-11-11 This book is an attempt to give a systematic presentation of results and methods which concern the fixed point theory of multivalued mappings and some of its applications In selecting the material we have restricted ourselves to studying topological methods in the fixed point theory of multivalued mappings and applications mainly to differential inclusions Thus in Chapter III the approximation on the graph method in fixed point theory of multi valued mappings is presented Chapter IV is devoted to the homological methods and contains more general results e.g. the Lefschetz Fixed Point Theorem the fixed point index and the topological degree theory In Chapter V applications to some special problems in fixed point theory are formulated Then in the last chapter a direct applications to differential inclusions are presented Note that Chapter I and Chapter II have an auxiliary character and only results connected with the Banach Contraction Principle see Chapter II are strictly related to topological methods in the fixed point theory In the last section of our book see Section 75 we give a bibliographical guide and also

signal some further results which are not contained in our monograph. The author thanks several colleagues and my wife Maria who read and commented on the manuscript. These include J Andres A Buraczewski G Gabor A Gorka M Gorniewicz S Park and A Wieczorek. The author wishes to express his gratitude to P Konstanty for preparing the electronic version of this monograph.
