Evolution, Early Experience and Human Development Darcia Narváez, 2012-11-29 The field of cognitive psychology has expanded rapidly in recent years with experts in affective and cognitive neuroscience revealing more about mammalian brain function than ever before In contrast psychological problems such as ADHD autism anxiety and depression are on the rise as are medical conditions such as diabetes obesity and autoimmune disorders Why in this era of unprecedented scientific self knowledge does there seem to be so much uncertainty about what human beings need for optimal development Evolution Early Experience and Human Development asserts that human development is being misshaped by government policies social practices and public beliefs that fail to consider basic human needs In this pioneering volume scientists from a range of disciplines theorize that the increase in conditions such as depression and obesity can be partially attributed to a disparity between the environments and conditions under which our mammalian brains currently develop and our evolutionary heritage For example healthy brain and emotional development depends to a significant extent upon caregiver availability and quality of care These include

practices such as breastfeeding co sleeping and parental social support which have waned in modern society but nevertheless may be integral to healthy development As the authors argue without a more informed appreciation of the ideal conditions under which human brains minds develop and function human beings will continue to struggle with suboptimal mental and physical health and as problems emerge psychological treatments alone will not be effective The best approach is to recognize these needs at the outset so as to optimize child development Evolution Early Experience and Human Development puts forth a logical empirically based argument regarding human mammalian needs for optimal development based on research from anthropology neurobiology animal science and human development The result is a unique exploration of evolutionary approaches to human behavior that will support the advancement of new policies new attitudes towards health and alterations in childcare practices that will better promote healthy human development Gender And Ageing: Changing Roles And Relationships Arber, Sara,Davidson, Kate,Ginn, Jay,2003-11-01 This text emphasizes changing gender roles and relationships gender identity and an examination of masculinities in midlife and later life It covers the need to reconceptualize partnership status in order to understand the implications of both widowhood and divorce for older women and men **The Ise Stories** ,2010-07-31 Ise monogatari is one of classical Japan s most important texts It influenced other literary court romances like The Tale of Genji and inspired artists playwrights and poets throughout Japanese history and to the present day In a series of 125 loosely connected episodes the Ise tells the story of a famous lover Captain Ariwara no Narihira 825 880 and his romantic encounters with women throughout Japan Each episode centers on an exchange of love poems designed to demonstrate wit sensitivity and courtliness Joshua Mostow and Royall Tyler present a fresh contemporary translation of this classic work together with a substantial commentary for each episode The commentary explores how the text has been read in the past and identifies not only the point of each episode but also the full range of historical interpretations many of which shaped the use of the Ise in later literary and visual arts The book includes reproductions from a version of the 1608 Saga bon printed edition of the Ise the volume that established Ise iconography for the entire Edo period 1600 1868
