**The Magic Numbers: A handbook on the power of Mathematics and how it has transformed our world** Hoe Yeen Nie, 2022-07-15 Mathematics is more fun mysterious and magical than many of us realise and it is present in all aspects of our lives We certainly can't live without it Why is zero considered the most dangerous number How did ancient Egyptians measure the world with just a simple stick What was the math error that caused a NASA rocket to blow up Which language is used every day all over the world and is purely made up of numbers Documentary filmmaker Hoe Yeen Nie and historian artist David Liew take you on a quest to unlock the secret world of numbers and math and explore how it has transformed our lives in all sorts of incredible ways Are you ready for an amazing adventure The Change Makers series of books will build in children a strong sense of inquiry to arm them with knowledge in S T E A M Science Technology Engineering Art and Math to tackle this brave new world of unknowns Numagician: The Magic Numbers And Untold Stories Fususu, Leo Rowan, 2021-03-11 What would you do if you stuck in a land that everyone was not able to speak anything How would you feel if you were an eagle well raised in the chicken coop to meet his fate in a slaughter house Do you think a sheep could be able to find a life purpose while his father kept telling him that there was none Be ready to explore the most exciting adventures in the Numagician kingdom There you will meet a dragon that breathes ink an eagle that wants to be vegan a sheep that thinks it was born to hug and many number animals that you have never seen before *Combinatorics on Words* Anna Frid, Robert Mercas, 2023-05-30 This book constitutes the refereed proceedings of the 14th International Conference on Combinatorics on Words WORDS 2023 held in Ume Sweden during June 12 16 2023 The 19 contributed papers presented in this book were carefully reviewed and selected from 28 submissions In addition the volume also contains 3 invited papers WORDS is the main conference series devoted to combinatorics on words This area is connected to several topics from computer science and mathematics including string algorithms automated proofs discrete dynamics number theory and of course classical combinatorics *The Construction of New Mathematical Knowledge in Classroom Interaction* Heinz Steinbring, 2006-03-30 Mathematics is generally considered as the only science where knowledge is uniform universal and free from contradictions Mathematics is a social product a net of norms as Wittgenstein writes In contrast to other institutions traffic rules legal systems or table manners which are often internally contradictory and are hardly ever unrestrictedly accepted mathematics is distinguished by coherence and consensus Although mathematics is presumably the discipline which is the most differentiated internally the corpus of mathematical knowledge constitutes a coherent whole The consistency of mathematics cannot be proved yet so far no contradictions were found that would question the uniformity of mathematics Heintz 2000 p 11 The coherence of mathematical knowledge is closely related to the kind of professional communication that research mathematicians hold about mathematical knowledge In an extensive study Bettina Heintz Heintz 2000 proposed that the historical development of formal mathematical proof was in fact a means of establishing a

communicable code of conduct which helped mathematicians make themselves understood in relation to the truth of mathematical statements in a co ordinated and unequivocal way

*Multiscale Modeling of Complex Molecular Structure and Dynamics with MBN Explorer* Ilia A. Solov'yov, Andrey V. Korol, Andrey V. Solov'yov, 2017-05-16 This book introduces readers to MesoBioNano MBN Explorer a multi purpose software package designed to model molecular systems at various levels of size and complexity In addition it presents a specially designed multi task toolkit and interface the MBN Studio which enables the set up of input files controls the simulations and supports the subsequent visualization and analysis of the results obtained The book subsequently provides a systematic description of the capabilities of this universal and powerful software package within the framework of computational molecular science and guides readers through its applications in numerous areas of research in bio and chemical physics and material science ranging from the nano to the mesoscale MBN Explorer is particularly suited to computing the system s energy to optimizing molecular structure and to exploring the various facets of molecular and random walk dynamics The package allows the use of a broad variety of interatomic potentials and can e g be configured to select any subset of a molecular system as rigid fragments whenever a significant reduction in the number of dynamical degrees of freedom is required for computational practicalities MBN Studio enables users to easily construct initial geometries for the molecular liquid crystalline gaseous and hybrid systems that serve as input for the subsequent simulations of their physical and chemical properties using MBN Explorer Despite its universality the computational efficiency of MBN Explorer is comparable to that of other more specialized software packages making it a viable multi purpose alternative for the computational modeling of complex molecular systems A number of detailed case studies presented in the second part of this book demonstrate MBN Explorer s usefulness and efficiency in the fields of atomic clusters and nanoparticles biomolecular systems nanostructured materials composite materials and hybrid systems crystals liquids and gases as well as in providing modeling support for novel and emerging technologies Last but not least with the release of the 3rd edition of MBN Explorer in spring 2017 a free trial version will be available from the MBN Research Center website [mbnresearch.com](http://mbnresearch.com)
