The book clarifies the clinical decision making process for establishing family involvement in patient care in different clinical settings and it outlines distinct steps in family assessment and treatment within a biopsychosocial organizing framework that can be applied to all families regardless of the patient's presenting problems. The book's approach is based on a broad model of family functioning which provides a multidimensional description of families and has validated instruments to assess family functioning from both internal and external perspectives. Unique features and benefits of the manual include: A focus on one consistent model of assessment and treatment that can be applied to a wide range of psychiatric conditions and clinical settings. Numerous case examples, tables and charts throughout the text to further highlight the material. A summary of key concepts at the end of each chapter.
