The Making Of A Quality Manager:

The Making of a Quality Manager Mort Levin, 2004 My introduction into quality management was a step function One day I was preparing to return from a sabbatical granted while I was engineering manager A few days later I was named quality manager This was the early 1970s well before the advent of the publicized push to improve quality and the now well known programs as epitomized by Six Sigma In the beginning it seemed that I was expected to insure that no problem products left the company At the same time I did not have that much direct influence on the level of quality or on making improvements I knew that I would not be content with this arrangement I have been retired for some time These stories are about how I managed in this environment and what I learned about helping others do a quality job The reader will not find examples of sudden major transformations Instead there will be accounts of achieving results bit by bit when many talk the talk and only a few walk the walk We were known for high quality products but considering that we were delivering to the medical community were we good enough How much money were we wasting because we were not putting forth maximum effort to improve Although my experience was with the design manufacture and delivery of electrical medical devices the lessons learned are applicable to any operation My sense from the literature that I still read and from conversations is that some quality managers the newer ones as well as those who have experience are facing problems similar to my early ones I hope that this saga will help them in their efforts to move forward and not to become discouraged I learned that managing quality is much more than numbers Its about people The experiences described are with a manufacturer of medical devices but they can be found in any other enterprise The lessons learned were basically about management
