**The Management of Schistosomiasis** Patricia L. Rosenfield, 2015-09-16 One of the major considerations of any environmental resource project must be the effect on human well being originally published in 1979 this study aims to deal specifically with the transmission of Schistosomiasis as a human environmental impact Due to its relationship with water Schistosomiasis transmission areas can be spread or aggravated by new water resource projects particularly in developing countries which could potentially lead to an epidemic situation Rosenfield aims to demonstrate how prevention ideas can be conceived early on in the design process by exploring methodologies for predicting the prevalence of Schistosomiasis in certain areas and management strategies for controlling transmission This title will be of interest to students of Environmental Studies and professionals

**Prospects for Schistosomiasis Elimination** Robert Bergquist, Darren Gray, 2019-09-03 Current efforts to limit the ravages of schistosomiasis are pushing the world closer to eliminating a chronic infection that has been associated with human life in the tropics since time immemorial This notwithstanding the disease remains a scourge for large populations in sub Saharan Africa Latin America and Southeast Asia and the main part of this book is made up by papers dealing with its current distribution discussing ways and means to establish and implement improved control approaches While chemotherapy limits the symptoms caused by schistosomiasis the number of infected people will not decrease until the parasite s life cycle is interrupted To that end some papers focus on the intermediate snail host which is notoriously difficult to control while others discuss human hygiene and sanitation The latter approach not only prevents infection through avoiding people being infected from the snail but more importantly also stops people infecting the snail by leaving contagious feces and urine in nature With morbidity reduced by chemotherapy the immediate target now is the interruption of transmission to be achieved by new tools such as the novel chemotherapies improved diagnostics for humans animals and snails and vaccines discussed in several of the papers As made clear in this book a complex infection requires new tools as well as work on many fronts above all however a clear idea is needed as to how to skillfully combine the tools available and sustain implemented control activities

**Schistosomiasis** W. Evan Secor,Daniel G. Colley,2006-02-10 Human schistosomiasis is a disease with a rich and well documented past and every expectation of an unfortunately long future These infections were known to the ancient Egyptians and their transmission shows little evidence of slowing down globally The good news is that field applicable and increasingly affordable chemotherapy has been available for almost 25 years Using chemotherapy and other means of control some countries have decreased transmission and made excellent headway against morbidity The bad news is that the public health problems caused by schistosomiasis are still with us with the estimated number of cases of schistosomiasis while shifting geographically remaining approximately 200 million for the last 30 years In fact with the development of field usable ultrasound technology and meta analyses performed on existing data there is a new appreciation for the extent of non lethal morbidity associated with these infections While the percentage of individuals with severe hepatosplenic disease remains below 10% recent reassessments of morbidity associated with schistosomiasis indicate that the prevalence of symptoms and the cost in disability adjusted life years is much greater than was previously commonly appreciated Van der Werf M J et al 2003 Acta Tropica 86 125 139 Charles H King personnel communication Strong impetus for addressing these issues is provided by the World Health Assembly's recently passed Resolution 54.19 which calls for efforts to reduce morbidity caused by schistosomiasis and soil transmitted helminths in school aged children largely through chemotherapy campaigns
