*American Book Publishing Record*, 1998      **The Many Faces of Neutron Stars** R. Buccheri, Jan van Paradijs, M. A. Alpar, 1998-07-31 A survey of recent progress in research on neutron stars emphasising radio pulsars accreting neutron stars in X ray binaries and the rotation powered high energy emission from isolated neutron stars Among the subjects reviewed are the broad history of neutron star research the properties of high density matter in neutron stars thermal and magnetic field evolution dynamics of neutron star crusts and glitches detection of radio emission from pulsars radio pulsar population millisecond and binary radio pulsars gamma ray emission from radio pulsars accreting neutron stars and black holes in X ray binaries the recently discovered kHz oscillations in low mass X ray binaries anomalous X ray pulsars the Bursting Pulsar X ray emission from isolated neutron stars neutron star atmosphere coalescing neutron star binaries and gamma ray bursts

**The Lives of the Neutron Stars** M. A. Alpar, Ü Kızıloğlu, Jan van Paradijs, 1995 This NATO AS was the third in the series of Advanced Study Institutes on neutron stars which started with Timing Neutron Stars held in Qe me near izmir Turkey April 1988 followed by Neutron Stars an Interdisciplinary Subject held in Agia Pelagia on the island of Crete September 1990 The first school centered on our main observational access to neutron stars i e the timing of radio pulsars and accretion powered neutron stars and on what timing of neutron stars teaches us of their structure and environment The second school had as its theme the interplay between diverse areas of physics which find interesting even exotic applications in the extreme conditions of neutron stars and their magnetospheres As the field has developed with the number of observed neutron stars rapidly increasing and our knowledge of many individual neutron stars getting deeper and more detailed an evolutionary picture of neutron stars has started to emerge This led us to choose The Lives of the Neutron Stars as the unifying theme of this third Advanced Study Institute on neutron stars Different types of neutron star activity have been proposed to follow one another in stages during the lives of neutron stars in the same basic population the evolutionary connection between low mass X ray binaries and millisecond radio pulsars is perhaps the prime example      **Neutron Stars:**

**Theory and Observation** J.E Ventura, David Pines, 1991-09-30 Some twenty three years after the discovery of pulsars and their identification as rotating neutron stars neutron star physics may be regarded as coming of age Pulsars and accreting neutron stars have now been studied at every wavelength from the initial radio observations through optical X and ray up to the very recent observations in the TeV region while theorists have studied in some detail relevant physical processes both outside and inside neutron stars As a result comparison of theory with observation provides a test of our theoretical ideas in fields as diverse as neutron and nuclear matter superfluidity and superconductivity the acceleration of high energy particles and the generation and maintenance of intense magnetic fields For example through observations of glitches and post glitch behavior of pulsars it has become possible to establish the presence of superfluid neutron matter in the inner crust of neutron stars and to determine some of its properties while neutron stars in compact binary systems offer one of the most

efficient energy generation mechanisms known. It is in fact the interactive interpretation of these diverse pieces of information that can lead to major advances in our understanding of the physics of these exotic objects and justifies the characterization of neutron stars as hadron physics laboratories.

**The Physics and Astrophysics of Neutron Stars** Luciano Rezzolla, Pierre Pizzochero, David Ian Jones, Nanda Rea, Isaac Vidaña, 2019-01-09. This book summarizes the recent progress in the physics and astrophysics of neutron stars and most importantly it identifies and develops effective strategies to explore both theoretically and observationally the many remaining open questions in the field. Because of its significance in the solution of many fundamental questions in nuclear physics, astrophysics and gravitational physics, the study of neutron stars has seen enormous progress over the last years and has been very successful in improving our understanding in these fascinating compact objects. The book addresses a wide spectrum of readers from students to senior researchers. Thirteen chapters written by internationally renowned experts offer a thorough overview of the various facets of this interdisciplinary science from neutron star formation in supernovae, pulsars, equations of state, super-dense matter, gravitational wave emission to alternative theories of gravity. The book was initiated by the European Cooperation in Science and Technology (COST) Action MP1304 Exploring fundamental physics with compact stars.

**Many Faces of Young Neutron Stars** Gautam Vasisht, Shri R. Kulkarni, California Institute of Technology. Division of Physics, Mathematics and Astronomy, 1996.

**Neutron Stars and Pulsars** Werner Becker, 2009-02-11. Neutron stars are the most compact astronomical objects in the universe which are accessible by direct observation. Studying neutron stars means studying physics in regimes unattainable in any terrestrial laboratory. Understanding their observed complex phenomena requires a wide range of scientific disciplines including the nuclear and condensed matter physics of very dense matter in neutron star interiors, plasma physics and quantum electrodynamics of magnetospheres and the relativistic magneto-hydrodynamics of electron-positron pulsar winds interacting with some ambient medium. Not to mention the test-bed neutron stars provide for general relativity theories and their importance as potential sources of gravitational waves. It is this variety of disciplines which among others makes neutron star research so fascinating not only for those who have been working in the field for many years but also for students and young scientists. The aim of this book is to serve as a reference work which not only reviews the progress made since the early days of pulsar astronomy but especially focuses on questions such as: What have we learned about the subject and how did we learn it? What are the most important open questions in this area and what new tools, telescopes, observations and calculations are needed to answer these questions? All authors who have contributed to this book have devoted a significant part of their scientific careers to exploring the nature of neutron stars and understanding pulsars. Everyone has paid special attention to writing educational comprehensive review articles with the needs of beginners, students and young

scientists as potential readers in mind This book will be a valuable source of information for these groups      **The Lives of the Neutron Stars** M.H. Alpar, Ü. Kizilogammalu, Jan van Paradijs, 1995-01-14 This NATO AS was the third in the series of Advanced Study Institutes on neutron stars which started with Timing Neutron Stars held in Qe me near izmir Turkey April 1988 followed by Neutron Stars an Interdisciplinary Subject held in Agia Pelagia on the island of Crete September 1990 The first school centered on our main observational access to neutron stars i.e. the timing of radio pulsars and accretion powered neutron stars and on what timing of neutron stars teaches us of their structure and environment The second school had as its theme the interplay between diverse areas of physics which find interesting even exotic applications in the extreme conditions of neutron stars and their magnetospheres As the field has developed with the number of observed neutron stars rapidly increasing and our knowledge of many individual neutron stars getting deeper and more detailed an evolutionary picture of neutron stars has started to emerge This led us to choose The Lives of the Neutron Stars as the unifying theme of this third Advanced Study Institute on neutron stars Different types of neutron star activity have been proposed to follow one another in stages during the lives of neutron stars in the same basic population the evolutionary connection between low mass X ray binaries and millisecond radio pulsars is perhaps the prime example      Neutron Stars Katia Moskvitch, 2020-09-15 The astonishing science of neutron stars and the stories of the scientists who study them Neutron stars are as bewildering as they are elusive The remnants of exploded stellar giants they are tiny merely twenty kilometers across and incredibly dense One teaspoon of a neutron star would weigh several million tons They can spin up to a thousand times per second they possess the strongest magnetic fields known in nature and they may be the source of the most powerful explosions in the universe Through vivid storytelling and on site reporting from observatories all over the world Neutron Stars offers an engaging account of these still mysterious objects Award winning science journalist Katia Moskvitch takes readers from the vast Atacama Desert to the arid plains of South Africa to visit the magnificent radio telescopes and brilliant scientists responsible for our knowledge of neutron stars She recounts the exhilarating discoveries frustrating disappointments and heated controversies of the past several decades and explains cutting edge research into such phenomena as colliding neutron stars and fast radio bursts extremely powerful but ultra short flashes in space that scientists are still struggling to understand She also shows how neutron stars have advanced our broader understanding of the universe shedding light on topics such as dark matter black holes general relativity and the origins of heavy elements like gold and platinum and how we might one day use these cosmic beacons to guide interstellar travel With clarity and passion Moskvitch describes what we are learning at the boundaries of astronomy where stars have life beyond death
