Sattler, 2012-12-06 This volume presents the proceedings of a symposium which I organised for the Developmental Section of the XIIIth International Botanical Congress at Sydney Australia on August 26 1981 The paper by Professor T Sachs which was received too late for inclusion into the symposium at Sydney was added to these proceedings because of its direct relevancy and importance The aim of the symposium was to state in an explicit and comprehensive fashion the most basic axioms and principles of plant morphology and morphogenesis An awareness of these axioms and principles is of paramount importance since they form the foundations as well as the goal of structural developmental botany Both teaching and research are predicated on them The Introduction by the editor briefly examines the meaning of the concepts axiom principle and plant construction The comprehensive paper by Dr G Cusset a unique historical overview explicates 37 principles of 5 major conceptual systems and many subsystems The extensive analysis includes a genealogy of ideas and ways of thinking of major authors ranging from philosophers and naturalists of antiquity to recent investigators of plant form and structure The bibliography of Dr Cusset's paper comprises ca 700 references The contribution by Professor H Mohr focusses on modern principles of morphogenesis and provides a penetrating analysis of scientific explanation in developmental biology The universal principles laws described in this paper apply to all living systems whereas the more specific principles are limited to plants or only higher plants Professor T

A. J. Trewavas, 2013-11-21 This volume summarises the lecture and poster sessions of a NATO advanced workshop held in Edinburgh July 15th 19th 1985 The workshop was held to bring together plant scientists of many different disciplines but who share a common interest in the regulatory role of calcium in plant development Although this volume covers the formal proceedings an equal length of time was devoted to discussion both in large and small groups A little of the flavour of the directions and character of the discussions will be found in the final article by David Clarkson which was written to cover this otherwise uncovered area of the workshop The volume reflects much of the current excitement in the field of plant calcium research Many of the participants are pioneers in their respective areas and the extent to which the last five years has seen a dramatic unfolding a complete inversion of the role of calcium from simple macro nutrient to major metabolic and developmental controller is recounted here The material is new and much of it unpublished In plant physiology the eighties may yet be designated the decade of calcium *Transformative Paleobotany* Michael Krings, Carla J. The Vascular Cambium Philip R. Larson, 2012-12-06 The cambium has been variously defined as follows The actively dividing layer of cells that lies between and gives rise to secondary xylem and phloem vascular cambium IAWA 1964 A meristem with products of periclinal divisions commonly contributed in two directions and arranged in radial files Term preferably applied only to the two lateral meristems the vascular cambium and cork cambium or phellogen Esau 1977 and Lateral meristem in vascular plants which produces secondary xylem secondary phloem and parenchyma usually in radial rows it consists of one layer of initials and their undifferentiated derivatives Little and Jones 1980 Clearly the cambium is a diverse and extensive meristem and no one definition will encompass all manifestations of what anatomists consider cambium Its diversity and extent are further exemplified by a single plant such as a temperate zone tree in which procambium is initiated in the embryo and perpetuated throughout every lateral primary meristem before giving rise to cambium in the secondary body The cambium thereafter performs its meristematic task of producing daughter cells that differentiate to specialized tissue systems The cambium however does not remain static Its derivatives vary either in form or function or rate of production at different positions on the tree with age of the tree and with season of the year Moreover the cambium responds both to internal signals and to external stimuli such as environment or wounding
