Social Environment And Health:

Social Environment and Health: Exploring how Socioeconomic Trajectories and Social Relations Influence Health, 2025 Chronic diseases are a major public health concern with societal impacts extending beyond mortality Genetics explain only a small to moderate proportion of chronic disease susceptibility while a large part of it is attributed to non genetic factors such as health behaviours or environmental factors In the context of Exposome research such factors are of interest However within this framework a group of exposures remains underexplored the social environment factors This thesis aimed to synthesise the literature on the association between social environment dimensions and cardiometabolic health investigate the association between life course socioeconomic trajectories and health outcomes and examine the association between quantity and quality of social relations and health Chapter 2 and chapter 3 describe two systematic reviews and meta analyses summarising the literature related to social environment dimensions and cardiometabolic health including a total of 168 and 281 papers respectively In both chapter 2 focusing on cardiometabolic risk factors and chapter 3 focusing on cardiometabolic health outcomes one of the main findings was that exposure to unfavourable or worse social environments was associated with worse cardiometabolic risk factors and higher risk of cardiometabolic outcomes Furthermore we observed large heterogeneity across the literature pertaining to several aspects such as population sociodemographic characteristics methodological aspects measures of social factors and overall the studies findings In chapters 4 and 5 we examined the relationship between life course socioeconomic trajectories and health outcomes We identified different trajectories in a European and a Brazilian setting and only in the European setting were life course socioeconomic trajectories longitudinally related to the health outcome examined i e chronic disease risk The findings from chapter 4 revealed five mutually exclusive socioeconomic trajectories which were strongly associated with chronic disease risk in late life in a large sample of over 30 000 older adults from 27 European countries We observed that individuals in the stable high trajectory and steep upward stable trajectory presented a lower risk of chronic disease later in life compared to those in the most disadvantaged trajectory stable low In chapter 5 we focused on cardiometabolic disease risk and addressed the scarcity and inconsistency in studies conducted in low and middle income countries The findings from this chapter revealed two mutually exclusive socioeconomic trajectories upward stable and upward downward Contrary to our hypothesis no associations between life course socioeconomic trajectories and cardiometabolic risk were observed in this Brazilian cohort In chapter 6 we investigated the quantity quality and source of social relations in relation to self rated health in 1 592 older adults from the U S in a prospective study with a 10 year follow up Among these social relations aspects examined we found especially quality of social relations and quality coming from a specific source to be associated with self rated health More specifically we found that higher levels of negative social support especially from family were linked to poor self rated health In conclusion this doctoral thesis provides consistent evidence linking more disadvantaged social environment factors

to worse health outcomes The results also revealed nuanced contextual variability such as according to gender and country income levels Context specific research is paramount in examining specific social factors or dimensions and the overarching effect of the social environment on influencing health outcomes Finally while causality remains uncertain in these relationships and knowledge gaps remain this thesis underscores the importance of considering social environmental factors in designing and implementing comprehensive public health strategies aimed at improving social circumstances and reducing inequalities

Human Behavior and the Social Environment, Macro Level Katherine van Wormer, Fred H. Besthorn, 2010-10-11. A timely revision in this global age, *Human Behavior and the Social Environment: Macro Level* develops a sophisticated and original view of the cultural, global, spiritual, and natural worlds that people inhabit and the impact of these worlds on human behavior. Its major new theme, sustainability, emerges as a key characteristic of contemporary practice. What is sustainable social work? What are the characteristics of a sustainable community? How is the present exploitation of environmental resources unsustainable for future generations? Following the greatest economic upheaval since the Great Depression, how can we envision a sustainable economy that will benefit all the people, not only the wealthy few? Human behavior results from biological, psychological, socio-economic, and cultural forces, but the mental health field has placed the most emphasis on intrapsychic factors to the near exclusion of socio-economic and cultural considerations. This significant collaboration seeks to correct this omission by helping students recognize patterns in the family, culture, and value systems in order to create safe and sustainable environments for their future clients. The emphasis on sustainable and unsustainable social welfare programs is geared to helping readers engage in advocacy for social justice. Integrates up-to-date research findings, models, and government statistics. Enhanced discussions of theory, group dynamics, family, community, and the environment. Theoretical concepts and practice implications in each chapter. Highlights the importance of the natural environment and ecology, the community of the earth, to human and group behavior. Sets forth a refined understanding of the role of spirituality, the community of faith, in people's lives. Focuses on evidence-based theory and research. Teaches from a global, cross-cultural perspective, highlighting themes of empowerment and social justice. Features dynamic readings, personal narratives, and photographs that highlight each chapter's topic. Accompanied by an online instructor's manual with lecture presentations, chapter summaries, key terms, suggested classroom activities, and a test bank with essay and multiple choice questions at www.oup.com/us/HBSE. Don't miss the companion volume, *Human Behavior and the Social Environment: Micro Level*, Second Edition, which offers an eye-opening view of how biological, psychological, and cultural forces influence individuals' behavior.

Nelson, Casey J. Dawkins, 2016-02-24 One of the policies that has been most widely used to try to limit urban sprawl has been that of urban containment These policies are planning controls limiting the growth of cities in an attempt to preserve open rural uses such as habitat agriculture and forestry in urban regions While there has been a substantial amount of research into these urban containment policies most have focused on issues of land use consumption transportation impacts or economic development issues This book examines the effects of urban containment policies on key social issues such as housing wealth building and creation racial segregation and gentrification It argues that while the policies make important contributions to environmental sustainability they also affect affordability for all the economic groups of citizens aside from the most wealthy However it also puts forward suggestions for revising such policies to counter these possible negative social impacts As such it will be valuable reading for scholars of environmental planning social policy and regional
