Social Production Of Technical Work:

The Social Production of Technical Work Peter Whalley, 1986-01-01 Engineers appear in recent social science as central though somewhat elusive figures They play a particularly critical role in the various attempts to understand the impact of science based industry on the class structure of advanced capitalist societies In this book Peter Whalley brings these engineers into sharper focus He argues that engineers should not be seen as members of a glamorous new class of professionalized knowledge workers nor as a radicalized new working class or partially de skilled technical proletariat Rather they should be viewed as trusted employees selected socialized trained and rewarded to perform the discretionary tasks necessarily delegated by employers in the complex organizations of advanced capitalism The book draws extensively on observations and interviews to compare engineers work and understanding in the high and low tech settings of two British companies Computergraph an advanced electronics firm and Metalco a traditional British engineering giant Whalley compares the technical work structure of Britain with those of France and the United States He argues that the impact of technological change on class structure is critically mediated by nationally specific modes of organizing technical work and producing trusted workers The book goes beyond cultural explanations of these national variations to examine how they are created and reproduced in the organization of work and the structuring of occupations

Integrating Design and Manufacturing for Competitive Advantage Gerald I. Susman, 1992 With more emphasis being placed on the cost and quality of new products and on reducing the lead time to develop them attention is turning to the increasingly important topic of design for manufacturing DFM This involves the collaboration among research and development manufacturing and other company functions and is aimed at accelerating the new product development process from product conception to market introduction A company can create a competitive advantage for itself by managing the process and its related organizational dynamics effectively This collection of essays focuses on the development of strategic capabilities through use of DFM tools and practices the role of DFM in specific product development phases and the social political and cultural context within which DFM is introduced

Doing Engineering Joyce Tang, 1999 The first to systematically compare Caucasians African Americans and Asian Americans in engineering this study of the career attainment and mobility of engineers in the United States tells how these three groups fare in the American engineering labor market and what they can look forward to in the future The numbers of black and Asian engineers recently have grown at a much faster rate than the number of Caucasian engineers With a projected steady increase in engineering jobs and demographic shifts this trend should continue Yet recent writings on the engineering profession have said little about career mobility beyond graduation This book identifies and explores key issues determining whether minorities in the US will attain occupational equality with their Caucasian counterparts Highlighting implications for theory policy making and the future of the profession *Doing Engineering* offers important insights into labor race and ethnicity that will be of interest to anyone studying stratification in a wide range of

Putting Work in Its Place Peter Meiksins, Peter Whalley, 2002 Using interviews with technical professionals from a wide range of employment settings examines the difficult path traversed by people who choose to work less than the standard forty hour week and refutes the popular myth of the customized work schedule as a return to traditionalism among women Shows that most of these workers male and female young and old remain strongly committed to their jobs but wish to combine work with other activities they value just as highly Argues that these professionals are challenging the accepted view of time requirements for careers in organizations and they are also helping to shape a new agenda for the future of the workplace to transform their individual successes into a normal practice of customized work time

Engineers for Change Matthew Wisnioski, 2012-10-19 An account of conflicts within engineering in the 1960s that helped shape our dominant contemporary understanding of technological change as the driver of history In the late 1960s an eclectic group of engineers joined the antiwar and civil rights activists of the time in agitating for change The engineers were fighting to remake their profession challenging their fellow engineers to embrace a more humane vision of technology In *Engineers for Change* Matthew Wisnioski offers an account of this conflict within engineering linking it to deep seated assumptions about technology and American life The postwar period in America saw a near utopian belief in technology's beneficence Beginning in the mid 1960s however society influenced by the antitechnology writings of such thinkers as Jacques Ellul and Lewis Mumford began to view technology in a more negative light Engineers themselves were seen as conformist organization men propping up the military industrial complex A dissident minority of engineers offered critiques of their profession that appropriated concepts from technology's critics These dissidents were criticized in turn by conservatives who regarded them as countercultural Luddites And yet as Wisnioski shows the radical minority spurred the professional elite to promote a new understanding of technology as a rapidly accelerating force that our institutions are ill equipped to handle The negative consequences of technology spring from its very nature and not from engineering's failures Sociotechnologists were recruited to help society adjust to its technology

Wisnioski argues that in responding to the challenges posed by critics within their profession engineers in the 1960s helped shape our dominant contemporary understanding of technological change as the driver of history

The European and American University Since 1800 Sheldon Rothblatt, Bjorn Wittrock, 1993-01-28 The essays in this book discuss how universities work in relation to other parts of a higher education system

Technology and Organization (RLE: Organizations) Harry Scarbrough, J. Corbett, 2013-08-21 In this important MBA text the authors adopt a highly integrated approach Using the three conceptual lenses of power meaning and design they explore fully the many different ways in which technology and organizations interact They highlight the major debates within these competing perspectives and argue that the flow of knowledge and ideas within and between organizations is crucial in shaping technologies and organizations alike

The Engineering-Business Nexus Steen Hyldgaard Christensen, Bernard Delahousse, Christelle Didier, Martin Meganck, Mike Murphy, 2018-11-14 Fascinating and compelling in equal measure this volume presents a critical examination of the multilayered relationships between engineering and business In so doing the study also stimulates ethical reflection on how these relationships either enhance or inhibit strategies to address vital issues of our time In the context of geopolitical economic and environmental tendencies the authors explore the world that we should want to create and the role of the engineer and the business manager in this endeavor Throughout this volume the authors identify periods of alignment and periods of tension between engineering and business They look at focal points of the engineering business nexus related to the development of capitalism The book explores past and present movements to reshape reform or reject this nexus The volume is informed by questions of importance for industry as well as for higher education These are What kinds of conflict arise for engineers in their attempts to straddle both professional and organizational commitments How should professionals be managed to avoid a clash of managerial and professional cultures How do engineers create value in firms and corporations What kinds of tension exist between higher education and industry What challenges does the neoliberal entrepreneurial university pose for management faculty students society and industry Should engineering graduates be ready for work and can they possibly be What kinds of business issues are reflected in engineering education curricula and for what purpose Is there a limit to the degree of business hybridization in engineering degree programs and if so what would be the criterion for its definition Is there a place in engineering education curricula for reflective critique of assumptions related to business and economic thinking One ideal of management and control comes to the fore as the Anthropocene the world transformed into an engineered artefact which includes human existence The volume raises the question as to how engineering and business together should be considered given the fact that the current engineering business nexus remains embedded within an economic model of continual growth By addressing macro level issues such as energy policy sustainable development globalization and social justice this study will both help create awareness and stimulate development of self knowledge among practitioners educators and students thereby ultimately addressing the need
