➤ What is Social Psychology?

Social psychology is the scientific study of how people's thoughts, feelings, and behaviors are influenced by the presence of others. It examines how people interact with each other, how they form and maintain relationships, how they perceive and interpret social situations, and how they are affected by social norms and group dynamics. 4. **Attitudes and beliefs:** These are the opinions and values that people hold about themselves, others, and the world around them. People tend to behave in ways that are consistent with their attitudes and beliefs.
5. **Personal characteristics:** These include factors such as personality traits, intelligence, and emotional intelligence. These factors can influence how people behave in social situations.
6. **Environmental factors:** These include factors such as the physical environment, the presence of other people, and the social context. These factors can influence how people behave in social situations.
7. **Cultural factors:** These include factors such as cultural values, beliefs, and practices. These factors can influence how people behave in social situations.

Collection Evaluation in Academic Libraries Karen C. Kohn, 2015-06-24 Librarians have long used data to describe their collections. Traditional measures have simply been inputs and outputs: volumes acquired, processed, owned, or circulated. With the growth since the 1990s of cultures of assessment, librarians have sought statistics that are evaluative rather than simply descriptive. More recently, exponentially increasing journal prices and an economic recession have intensified the need to make careful purchasing decisions and to justify these to administrators. A methodical evaluation of a library collection can help librarians understand and meet user needs and can help communicate to administrators that the library is a good use of the institution's money. *Collection Evaluation in Academic Libraries: A Practical Guide for Librarians* equips collections managers to select and implement a method or several methods of evaluating their library collections. It includes sections on four tools for evaluation: Comparison to peer institutions; Core lists; Usage statistics from circulation and ILL; Citation analysis. Chapters on each of these approaches present the advantages and disadvantages of each method, instructions on data collection and analysis with screenshots, and suggested action steps after completing the analysis. With a unique combination of step-by-step instructions and discussions of the purpose and role of data, this book provides an unusually thorough guide to collection evaluation. It will be indispensable for collection development librarians and anyone looking to strengthen the culture of assessment within the library. [Big Digital Humanities](#) Patrik Svensson, 2016-07-28 Big Digital Humanities has its origins in a series of seminal articles Patrik Svensson published in the *Digital Humanities Quarterly* between 2009 and 2012. As these articles were coming out, enthusiasm around Digital Humanities was acquiring a great deal of momentum, and significant disagreement about what did or didn't count as Digital Humanities work. Svensson's articles provided a widely sought-after omnibus of Digital Humanities history, practice, and theory. They were informative and knowledgeable and tended to foreground reportage and explanation rather than utopianism or territorial contentiousness. In revising his original work for book publication, Svensson has responded to both subsequent feedback and new developments. Svensson's own unique perspective and special stake in the Digital Humanities conversation comes from his role as director of the HUMlab at Umeå University. HUMlab is a unique collaborative space and Digital Humanities center which officially opened its doors in 2000.

According to its own official description the HUMlab is an open creative studio environment where students researchers artists entrepreneurs and international guests come together to engage in dialogue experiment with technology take on challenges and move scholarship forward It is this last element moving scholarship forward that Svensson argues is the real opportunity in what he terms the big digital humanities or digital humanities as practiced in collaborative spaces like the HUMlab and he is uniquely positioned to take an account of this evolving dimension of Digital Humanities practice
