Covello, W. Gary Flamm, Joseph V. Rodricks, Robert G. Tardiff, 2012-12-06 In 1980 a group of scientists from national laboratories universities and other research organizations gathered informally in a series of meetings to consider the state of research on risks to health safety and the environment Each scientist had conducted research on the subject All felt that the traditional disciplines and professional societies to which they belonged were neither adequate nor appropriate for addressing the extraordinarily complex problems of assessing the risks inherent in modern society The consensus of the group was that a new society was needed to address these problems in a scientific and objective way From these initial meetings the Society for Risk Analysis was formed The major aims of the Society for Risk Analysis as stated in its constitution are to promote knowledge and understanding of risk analysis techniques and their applications to promote communication and interaction among those engaged in risk analysis and to disseminate risk analysis information and promote the advancement of all aspects of risk analysis Members of the Society are drawn from a variety of disciplines including the health sciences engineering the physical sciences the humanities and the behavioral and social sciences An important function of the Society

is the annual meeting at which various aspects of risk analysis are discussed The first annual meeting represented by this volume was the International Workshop on the Analysis of Actual vs **Societal Risk Assessment** Richard C. The Risk Analysis Controversy Howard C. Kunreuther, Eryl V. Ley, 2012-12-06 The first summer study at IIASA brought together a cross section of individuals from different disciplines and nationalities All the participants have had an interest in the role of risk analysis given the institutional arrangements which guide decision making for new technologies This book contains edited versions of the papers presented at the meeting as well as a transcript of the discussions which took place It provides the ingredients for a broader framework for studying the problems associated with technology and society where risk is representative of a much wider set of concerns than simply the probability and consequences of a hazardous accident The Bundesministerium fuer Forschung und Technologie has an interest in promoting risk and safety research because of these new developments in society over the past ten years In particular there has been a diminished confidence in experts statements on risk and a realization that many of the events which are being examined are not subject to detailed scientific

analysis There has also been an increasing recognition that distinctions must be made between analysis of the risk associated with an event and people's values and preferences Another important development is the concern by the public that they participate more fully in the decision process on these issues These concerns were articulated in both the papers and the open discussions at the summer study

Uncertainty in Risk Assessment, Risk Management, and Decision Making V.T. Covello, Lester B. Lave, Alan Moghissi, V.R.R. Uppuluri, 2013-03-08 The subject of this volume uncertainties in risk assessment and management reflects an important theme in health safety and environmental decision making Most technological hazards are characterized by substantial uncertainty Recent examples include nuclear waste disposal acid rain asbestos in schools carcinogens in food and hazardous waste dealing with such uncertainty is arguably the most difficult and challenging task facing risk assessors and managers today Four primary sources of uncertainty in risk assessment and management can be identified 1 uncertainties about definitions 2 uncertainties about scientific facts 3 uncertainties about risk perceptions and attitudes and 4 uncertainties about values Uncertainties about definitions derive primarily from disagreements about the meaning and interpretation of key concepts such as probability Uncertainties about scientific facts derive primarily from disagreements about failure modes the probability and magnitude of adverse health or environmental consequences cause and effect relationships dose response relationships and exposure patterns Uncertainties about risk perceptions and attitudes derive primarily from disagreements about what constitutes a significant or acceptable level of risk Uncertainties about values derive primarily from disagreements about the desirability or worth of alternative risk management actions or consequences The papers in this volume address each of these sources of uncertainty from a variety of perspectives Reflecting the broad scope of risk assessment and risk management research the papers include contributions from safety engineers epidemiologists toxicologists chemists biostatisticians biologists decision analysts economists psychologists political scientists sociologists ethicists and lawyers

Normal Accidents Charles Perrow, 2011-10-12 Normal Accidents analyzes the social side of technological risk Charles Perrow argues that the conventional engineering approach to ensuring safety building in more warnings and safeguards fails because systems complexity makes failures inevitable He asserts that typical precautions by adding to complexity may help create new categories of accidents At Chernobyl tests of a new safety system helped produce the meltdown and subsequent fire By recognizing two dimensions of risk complex versus linear interactions and tight versus loose coupling this book provides a powerful framework for analyzing risks and the organizations that insist we run them The first edition fulfilled one reviewer's prediction that it may mark the beginning of accident research In the new afterword to this edition Perrow reviews the extensive work on the major accidents of the last fifteen years including Bhopal Chernobyl and the Challenger disaster The new postscript probes what the author considers to be the quintessential Normal Accident of our time the Y2K computer problem

Improving Drug Safety — A Joint Responsibility Rolf Dinkel, Bruno Horisberger, Kenneth W. Tolo, 2013-03-07 As the focus on pharmaceuticals has broadened from concern for

their cost and effectiveness to their real and potential risks and benefits a critical question has been raised whose responsibility is it to improve drug safety In April 1990 this question became the theme for a conference at Wolfsberg Switzerland near the shores of Lake Constance Called an international dialogue conference by its organizers the meeting brought together leaders from the pharmaceutical industry regulatory authorities academia medicine consumer organizations and the media Opening addresses were given by representatives of the Council for International Organizations of Medical Sciences CIOMS the International Federation of Pharmaceutical Manufacturers Associations IFPMA the Swiss International Pharmaceutical Agency and the RAD AR Consortium This book documents the papers presented and discussions held at this conference which took the topic of risks and benefits of drug therapy one step further to responsibility It includes a rich menu of issues for those who care about the evaluation of drug therapy the ethics behind it the expectations of the patient and the role of traditional and nontraditional drug safety communications The ideas expressed here come from different parts of the world but relate to common drug safety problems observations and scientific assessments they provide insights into innovative approaches cautious changes and desired actions The papers in this volume are broadly divided into conceptual perspectives ethics how the knowledge about drug risks and benefits is generated and appraised the expectations in drug safety and operational perspectives communication discussion and action

Environment and Society Magnus Boström, Debra J. Davidson, 2018-06-13 This book offers a critical analysis of core concepts that have influenced contemporary conversations about environment society relations in academic political and civil circles Considering these conceptualizations are currently shaping responses to environmental crises in fundamental ways critical reflections on concepts such as the Anthropocene metabolism risk resilience environmental governance environmental justice and others are well warranted Contributors to this volume working across a multitude of areas within environmental social science scrutinize underlying worldviews and assumptions asking a common set of key questions What are the different concepts able to explain How do they take into account society environment relations What social cultural or geo political biases and blinders are inherent What actions or practices do the concepts inspire The transdisciplinary engagement and reflexivity regarding concepts of environment society relations represented in these chapters is needed in all spheres of society in academia policy and practice not the least to confront current tendencies of anti reflexivity and denialism

The Perception of Risk Paul Slovic, 2016-10-06 The concept of risk is an outgrowth of our society's great concern about coping with the dangers of modern life The Perception of Risk brings together the work of Paul Slovic one of the world's leading analysts of risk risk perception and risk management to examine the gap between expert views of risk and public perceptions Ordered chronologically it allows the reader to see the evolution of our understanding of such perceptions from early studies identifying public misconceptions of risk to recent work that recognizes the importance and legitimacy of equity trust power and other value laden issues underlying public concern

Warnings and Risk

Communication Michael S. Wogalter, Dave DeJoy, Kenneth R. Laughery, 1999-09-09 With contributions from leading international experts this book provides a comprehensive review of warnings and risk communications The authors explain how best to communicate warnings whether certain communications are effective and what factors influence the communication process and address the major issues in theory research and applications of warnings and risk communication The book is an authoritative sourcebook on the theory research and applications in the field It provides a resource for professionals and academics in diverse domains that range from human factors ergonomics engineering psychology marketing and design to industry government and litigation Economics of Food Safety Julie A.

Caswell, 2012-12-06 Public concern about the safety and healthfulness of the food supply grew markedly during the 1980s Numerous government academic interest group and media reports questioning the adequacy of the food safety regulatory system formed the basis for this increase in concern While public concern focused most directly on pesticide residues in food scientists emphasized the risks of illness associated with microbiological contamination of food Much additional attention was focused on the food supply as a result of the striking consensus on dietary recommendations that emerged in the late 1980s based on increased scientific knowledge of linkages between diet and health Relatively little research on the economic aspects of food safety and nutrition issues had been conducted up to the mid 1980s These aspects are complex On the consumer demand side they include consumers perceptions of the risks associated with particular food products how demographic characteristics influence consumers processing of risk information and subsequent changes in food demand behavior and the monetary value consumers might place on changes in the risk profiles of products The economic benefits and costs associated with current food consumption patterns are a major determinant of demand for improved food safety and dietary change through government regulation While a more complete picture of risks benefits and costs has been emerging recently much is yet unknown
