Technological Change Emmanuel G Mesthene, 1970

[Technology, Values, and Society](#) Mitra Das, Shirley Kolack, 2008 Technology is not value free nor does it exist in a vacuum It needs a social basis technology is affected by society and influences it Technology Values and Society illustrates this using an examination of cross cultural case studies representing simple intermediate and complex societies Certain forms of technology exist when conducive values and structures sustain them However this relationship is not one way Technological changes do precipitate social and value changes It is impossible to sustain egalitarian values in a society involving technology based on hierarchical relationships Understanding this connection is vital if we are to keep some control over the way in which technology affects

those which heralded the beginning of the twentieth century in physics dominates the picture This book also discusses the ongoing refutation of old concepts in the social sciences Some of them are the traditional concepts of rationality for example based on maximization of interests the linearity of axiomatic methods methodological individualism and the concept of a static society Today the revolutionary change from a static view of our society to an evolutionary one reverberates through all social sciences and will dominate the twenty first century In an uncertain and risky world where cooperation and teamwork is getting more and more important one cannot any longer call the maximization of one's own expectations of utility or interests rational

Information Society Karamjit S. Gill, 2012-12-06 Human centredness A Challenge to Post industrial Europe The key power in industrial society has been linked to the possession of capital and factory In the information society it could be rather different If one accepts that that the key power in the information society will be linked not so much to the ownership of information but to human creativity nourished by that information the productive force of today and tomorrow could be more and more the human brain Making

use of one's intelligence is always accompanied by positive emotion which in turn further activates the intelligence. But unfortunately under present conditions workers of all levels live in fear, anxiety, and stress rather than desire and motivation. The question of basic human ecology, quality of life, is therefore a major strategic factor. It is precisely the opposite to the mechanisms of exclusion that currently dominate our society: exclusion of young people through joblessness, but also exclusion through technology, as with the helplessness of older people or the poorly educated confronted with ticket dispensing machines or other automats. This is not idle theorizing; it corresponds to concrete facts. It is, for example, how some observers interpret the crisis at IBM. Because its programs were less human friendly, it was shaken to its foundations by Apple and Microsoft, though it seems since to have learnt its lesson.

Technology and the American Economy United States. National Commission on Technology, Automation, and Economic Progress, 1966. *Risk Society* Professor Ulrich Beck, 1992-07-01. This panoramic analysis of the condition of Western societies has been hailed as a classic. This first English edition has taken its place as a core text of contemporary sociology alongside earlier typifications of society as postindustrial and current debates about the social dimensions of the postmodern. Underpinning the analysis is the notion of the risk society. The changing nature of society's relation to production and distribution is related to the environmental impact as a totalizing globalizing economy based on scientific and technical knowledge becomes more central to social organization and social conflict.

The Credential Society Randall Collins, 2019-05-28. The Credential Society is a classic on the role of higher education in American society and an essential text for understanding the reproduction of inequality. Controversial at the time, Randall Collins's claim that the expansion of American education has not increased social mobility but rather created a cycle of credential inflation has proven remarkably prescient. Collins shows how credential inflation stymies mass education's promises of upward mobility. An unacknowledged spiral of the rising production of credentials and job requirements was brought about by the expansion of high school and then undergraduate education with consequences including grade inflation, rising educational costs, and misleading job promises dangled by for-profit schools. Collins examines medicine, law, and engineering to show the ways in which credentialing closed these high status professions to new arrivals. In an era marked by the devaluation of high school diplomas, outcry about the value of expensive undergraduate degrees, and the proliferation of new professional degrees like the MBA, *The Credential Society* has more than stood the test of time. In a new preface, Collins discusses recent developments, debunks claims that credentialization is driven by technological change, and points to alternative pathways for the future of education.

Media and Society into the 21st Century Lyn Gorman, David McLean, 2009-02-17. *Media and Society into the 21st Century* captures the breathtaking revolutionary sweep of mass media from the late 19th century to the present day. Updated and expanded new edition including coverage of recent media developments and the continued impact of technological change. Newly reworked chapters on media war, international relations, and new media. A new Web 2.0 section explores the role of blogging, social networking, user-generated content, and

search media in media landscape *Technology, Politics, And Society In China* Rudi Volti, 2019-07-11 This study is the first to summarize the major technological policies implemented in China since 1949 and to place them in their social and historical context Dr Volti looks at technological change in China as part of a broader process of economic political cultural and organizational change focusing primarily on four key areas agriculture energy ground transportation and medicine and public health He emphasizes how technological change has been shaped by political and ideological structures notes how China's unique cultural heritage has affected adoption of technologies developed outside China and assesses China's success in developing technologies appropriate to its specific needs as an economically and politically developing nation He draws on interviews with technicians engaged in the transfer of technology to China as well as extensive primary source materials
