Mount Holyoke College to her fieldwork in Norman Oklahoma her coauthorship of *Birds of Oklahoma* and subsequent correspondence with George Sutton to her later years in Columbus Ohio Nice's career grew in tandem with her personal life and in some cases because of it Although bridled by social constraints her work spoke for itself she produced more than 244 papers articles and published letters seven books and book length monographs and 3 000 reviews This voluminous and field defining output earned her the respect of some of the most important biological scientists of the day among them Konrad Lorenz and Ernst Mayr who declared that she had almost singlehandedly initiated a new era in American ornithology For the *Birds* gives Nice her due recognition lending compelling insight into her activism promoting conservation and preservation her field methods and the role of women in the history of science particularly in ornithology Nice's life acts as a looking glass into the various challenges faced by fellow female pioneers their resolve and their contributions

Nonmodern Practices
 Elisabeth Arnould-Bloomfield, Claire Chi-ah Lyu, 2020-10-01 This collection of essays responds to the urgent call in the humanities to go beyond the act of negative critique which so far has been the dominant form of intellectual inquiry in academia The contributors take their inspiration from Bruno Latour's pragmatic relational approach and his philosophy of hybrid world where culture is immanent to nature and knowledge is tied to the things it co creates In such a world nature society and discourse relate to rather than negate each other The 11 essays ranging from early modern humanism and modern theorization of literature to contemporary political ecology and animal studies propose new productive ways of thinking reading and writing with not against the world In carrying out concrete practices that are inclusive rather than exclusive contributors strive to exemplify a form of scholarship that might be better attuned to the concerns of our post humanist era

The Ibis, 1921 *The Triune Brain in Evolution* P.D. MacLean, 1990-01-31 This is MacLean's major work on the evolutionary development of the human brain In its evolution the human forebrain expands along the lines of three basic formations that anatomical and biochemically reflect an ancestral relationship respectively to reptiles early mammals and late mammals MacLean describes this as the Triune Brain Amazon com viewed July 29 2020
