Textures Peace And Security Series 4:

Fundamental and Applied Nano-Electromagnetics Antonio Maffucci, Sergey A. Maksimenko, 2016-04-08 This book presents the most relevant and recent results in the study of Nanoelectromagnetics a recently born fascinating research discipline whose popularity is fast arising with the intensive penetration of nanotechnology in the world of electronics applications Studying nanoelectromagnetics means describing the interaction between electromagnetic radiation and quantum mechanical low dimensional systems this requires a full interdisciplinary approach the reason why this book hosts contributions from the fields of fundamental and applied electromagnetics of chemistry and technology of nanostructures and nanocomposites of physics of nano structures systems etc The book is aimed at providing the reader with the state of the art in Nanoelectromagnetics from theoretical modelling to experimental characterization from design to synthesis from DC to microwave and terahertz applications from the study of fundamental material properties to the analysis of complex systems and devices from commercial thin film coatings to metamaterials to circuit components and nanodevices The book is intended as a reference in advanced courses for graduate students and as a guide for researchers and industrial professionals involved in nanoelectronics and nanophotonics applications

Remote Sensing Boris Escalante, 2012-06-13 This dual conception of remote sensing brought us to the idea of preparing two different books in addition to the first book which displays recent advances in remote sensing applications this book is devoted to new techniques for data processing sensors and platforms We do not intend this book to cover all aspects of remote sensing techniques and platforms since it would be an impossible task for a single volume Instead we have collected a number of high quality original and representative contributions in those areas

Functional Nanostructures and Sensors for CBRN Defence and Environmental Safety and Security Anatolie Sidorenko, Horst Hahn, 2020-03-17 Over the last decade techniques for materials preparation and processing at nanometer scale have advanced rapidly leading to the introduction of novel principles for a new generation of sensors and detectors At the same time the chemical industry transport and agriculture produce huge amounts of dangerous waste gases and liquids leading to soil air and water contamination One more modern threat international terrorism demands that scientists make efforts to apply new principles and technologies to protect society against chemical biological radiological and nuclear CBRN attacks and to develop novel effective technologies for the remediation of large contaminated areas Accordingly the main goal of this book is to bring together experts theorists experimentalists engineers and technologists for an extensive discussion covering novel principles for functional nanostructures and detector fabrication and implementation the development of novel technologies for the deactivation of CBRN agents their experimental realization and their application in novel monitoring and control systems and technological processes for soil and water remediation with a view to environmental protection and defence against CBRN based terrorism In keeping with the book s main goal the following topics are highlighted and discussed Sensors and detectors detection of

chemicals principles of artificial nose and chemical micro lab on a chip design surface and underground water quality monitoring systems molecular electronics superconducting electronic devices quantum detectors and Qubits Environmental protection and CBRN detection of infrared microwave X ray and terahertz radiation Principles for novel IR UV and Terahertz wave devices for the detection of low contrast objects Novel technological processes for CBRN destruction and deactivation All these topics are strongly interrelated both with regard to fundamental aspects and to fabrication and implementation technologies in addition they are highly promising for application in novel functional devices computer logics sensing and detection of low concentration chemicals weak and extremely weak magnetic and microwave fields infrared and ultraviolet radiation Given its scope the book will be a useful and interesting guide for a broad readership of engineers scientists PhD students and experts in the area of defence against environmental terrorism

The Middle Ages in Texts and Texture

Jason Glenn,2011-08-02 The Middle Ages in Texts and Texture is an introduction to medieval Europe unlike any other These 26 essays written by accomplished scholars all trained at the University of California Berkeley reflect on medieval texts and the opportunities they present for exploration of the Middle Ages Introduced in a foreword by Thomas N Bisson Harvard University these essays present a textured picture of the medieval world and offer models for how to reflect fruitfully on medieval sources To help orient the reader three maps the editor s introduction and an index are provided

Degradation

Assessment and Failure Prevention of Pipeline Systems Gabriella Bolzon,Giovanna Gabetta,Hryhoriy

Nykyforchyn,2020-09-10 This book presents the results of the research project G5055 Development of novel methods for the prevention of pipeline failures with security implications carried out in the framework of the NATO Science for Peace and Security program and explores the lifecycle assessment of gas infrastructures Throughout their service lives pipelines transporting hydrocarbons are exposed to demanding working conditions and aggressive media In long term service material aging increases the risk of damage and failure which can be accompanied by significant economic losses and severe environmental consequences This book presents a selection of complementary contributions written by experts operating in the wider fields of pipeline integrity taken together they offer a comprehensive portrait of the latest developments in this technological area

Atomic Pair Distribution Function Analysis S. J. L. Billinge,Simon Billinge,Kirsten M. Ø

Jensen,Kirsten Jensen,2023 This book presents hands on worked problems and solutions for modelling the structure of nanomaterials and disorder in crystals It supplies atomic pair distribution function PDF data and takes the reader step by step through the process of analysing the data to understand details of the local atomic or magnetic structure It has worked examples using the programs PDFgui and diffpy cmi The chapters progress systematically from simple to more complicated examples allowing the reader to build confidence and independence The book covers tips and tricks for obtaining good PDFs from raw x ray and electron diffraction data It goes through the process of getting started with the PDFgui and diffpy cmi programs It then takes real examples from the published literature and shows how scientific questions were answered by the

modelling The scientific examples covered include fitting local structure of complex crystals fitting multi phase samples r dependent fitting to explore local symmetry breaking understanding structural phase transitions by modelling temperature dependent datasets modelling nanoparticle structures using attenuated average structure models and discrete cluster models modelling data from polycrystalline thin film samples intercolated metal organic framework compounds and carrying out a magnetic PDF structure refinement

Uniting Electron Crystallography and Powder Diffraction Ute Kolb, Kenneth Shankland, Louisa Meshi, Anatoly Avilov, William I.F David, 2012-12-20 The polycrystalline and nanocrystalline states play an increasingly important role in exploiting the properties of materials encompassing applications as diverse as pharmaceuticals catalysts solar cells and energy storage A knowledge of the three dimensional atomic and molecular structure of materials is essential for understanding and controlling their properties yet traditional single crystal X ray diffraction methods lose their power when only polycrystalline and nanocrystalline samples are available It is here that powder diffraction and single crystal electron diffraction techniques take over substantially extending the range of applicability of the crystallographic principles of structure determination This volume a collection of teaching contributions presented at the Crystallographic Course in Erice in 2011 clearly describes the fundamentals and the state of the art of powder diffraction and electron diffraction methods in materials characterisation encompassing a diverse range of disciplines and materials stretching from archeometry to zeolites As such it is a comprehensive and valuable resource for those wishing to gain an understanding of the broad applicability of these two rapidly developing fields

Advances in Visual Computing George Bebis, Richard Boyle, Bahram Parvin, Darko Koracin, Daniela Ushizima, Sek Chai, Shinjiro Sueda, Xin Lin, Aidong Lu, Daniel Thalmann, Chaoli Wang, Panpan Xu, 2019-10-25 This book constitutes the refereed proceedings of the 14th International Symposium on Visual Computing ISVC 2019 held in Lake Tahoe NV USA in October 2019 The 100 papers presented in this double volume were carefully reviewed and selected from 163 submissions The papers are organized into the following topical sections Deep Learning I Computer Graphics I Segmentation Recognition Video Analysis and Event Recognition Visualization ST Computational Vision AI and Mathematical methods for Biomedical and Biological Image Analysis Biometrics Virtual Reality I Applications I ST Vision for Remote Sensing and Infrastructure Inspection Computer Graphics II Applications II Deep Learning II Virtual Reality II Object Recognition Detection Categorization and Poster

Nano-Structures for Optics and Photonics Baldassare Di Bartolo, John Collins, Luciano Silvestri, 2014-10-06 The contributions in this volume were presented at a NATO Advanced Study Institute held in Erice Italy 4 19 July 2013 Many aspects of important research into nanophotonics plasmonics semiconductor materials and devices instrumentation for bio sensing to name just a few are covered in depth in this volume The growing connection between optics and electronics due to the increasing important role plaid by semiconductor materials and devices find their expression in the term photonics which also reflects the importance of the photon aspect of light in the description of the performance of several optical systems

Nano structures have unique capabilities that allow the enhanced performance of processes of interest in optical and photonic devices. In particular, these structures permit the nanoscale manipulation of photons, electrons, and atoms; they represent a very hot topic of research and are relevant to many devices and applications. The various subjects bridge over the disciplines of physics, biology, and chemistry, making this volume of interest to people working in these fields. The emphasis is on the principles behind each technique and on examining the full potential of each technique.

This Engaging Realm of Kindle Books: A Thorough Guide Revealing the Advantages of E-book Books: A Realm of Convenience and Flexibility E-book books, with their inherent portability and simplicity of availability, have freed readers from the limitations of hardcopy books.
