Shueman, Benjamin B. Wolman, 2012-12-06 Family and marital therapies are rapidly becoming highly used methods of treatment of mental disorders and are no longer ancillary methods to individual psychotherapy The last few decades have brought about an increasing awareness of the fact that excluding organic etiology practically all mental disorders are caused fostered and or related to faulty interpersonal relations As a rule the earlier in life one is exposed to noxious factors the more severe is the damage Thus early child parents and child siblings interactions are highly relevant determinants of mental health and mental disorder Moreover parents themselves do not live in a vacuum Their marital interaction significantly contributes to their own mental health or to its decline and parent child relationships are greatly influenced by the nature of intraparental relationships Parental discord conflicts and abandonment affect the child s personality development Thus family and marital therapy is more than therapy it is an important contribution to the prevention of mental disorder The present volume is comprised of three parts The first primarily theoretical analyzes the fundamental aspects of marital and family therapy The second part describes the various therapeutic techniques and the last deals with several specific issues It gives me great pleasure to acknowledge my gratitude to my coeditor Dr George Stricker Without his thorough and devoted efforts this volume could not have come into being I am also profoundly indebted to our consulting editors Dr James Framo Dr      **Family Psychology** John W.
