Materials Characterization for Systems Performance and Reliability James W. McCauley, Volker Weiss, 2013-03-13 The Sagamore Army Materials Research Conferences have been held in the beautiful Adirondack Mountains of New York State since 1954 Organized and conducted by the Army Materials and Mechanics Research Center Watertown Massachusetts in cooperation with Syracuse University the Conferences have focused on key issues in Materials Science and Engineering that impact directly on current or future Army problem areas A select group of speakers and attendees are assembled from academia industry and other parts of the Department of Defense and Government to provide an optimum forum for a full dialogue on the selected topic This book is a collection of the full manuscripts of the formal presentations given at the Conference The emergence and use of nontraditional materials and the excessive failures and reject rates of high technology materials intensive engineering systems necessitates a new approach to quality control Thus the theme of this year s Thirty First Conference Materials Characterization for Systems Performance and Reliability was selected to focus on the need and mechanisms to transition from defect interrogation of materials after production to utilization of materials characterization during manufacturing The guidance and help of the steering committee and the dedicated and conscientious efforts of Ms Karen Ka100stian Conference Coordinator and Mr William K Wilson and Ms Mary Ann Holmquist are gratefully acknowledged The continued active interest and support of Dr Edward S Wright Director AMMRC Dr Robert W Lewis Associate Director AMMRC and COL L C Ross Commander Deputy Director AMMRC are greatly appreciated

Chromatography Sadao Mori, Howard G. Barth, 2013-03-09 Although size exclusion chromatography SEC is perhaps the most popular and widely used technique for determining the molecular weight distribution of polymeric materials there have been very few texts written on this topic During the past decade SEC has experienced a considerable amount of growth in regard to column and detector technology and new applications With these advances SEC can now be used for determining absolute molecular weight polymer chain conformation and size and branching as well as polymer solution properties This book introduces the reader to the fundamentals of SEC with emphasis on practical aspects of the technique such as column and mobile selection calibration new detector capabilities and guidelines for performing SEC on most types of polymers especially those of industrial importance This book is intended for either those new to the field of SEC or for those research workers who require a more comprehensive background

Modern Methods of Polymer Characterization Howard G. Barth, Jimmy W. Mays, 1991-09-03 Presents the methods used for characterization of polymers In addition to theory and basic principles the instrumentation and apparatus necessary for methods used to study the kinetic and thermodynamic interactions of a polymer with its environment are covered in detail Some of the methods examined include polymer separations and characterization by size exclusion and high performance chromatography inverse gas chromatography osmometry viscometry ultracentrifugation light scattering and spectroscopy

Gradient HPLC of Copolymers and Chromatographic Cross-Fractionation Gottfried Glöckner, 2012-12-06 The problems involved in separating complex macromolecules require understanding not only the chromatographic process but also the physicochemical behavior of the solutes This sentence from the pen of Phyllis R Brown 1 University of Rhode Island can certainly be applied to synthetic copolymers whose structure is very complex indeed Thus it may be forgiven that a book on copolymer HPLC has been written not by a trained chromatographer but by someone from the polymer side The HPLC of synthetic polymers is often understood to mean only a synonym for size exclusion chromatography The latter method separates polymers according to the size of the macromolecules and enables the molecular weight distribution of a sample to be evaluated But as early as 1936 Mark and Saito attempted chromatographic fractionation of cellulose acetate on a charcoal like adsorbent made from blood HPLC adsorption chromatography was first applied to copolymer analysis by Teramachi et al in 1979 Since then another branch of polymer HPLC has arisen which has the capacity of separating copolymers by composition and enables the chemical composition distribution to be evaluated The technique requires a suitable elution program and is mainly carried out as gradient elution
