How Monkeys See the World Dorothy L. Cheney, Robert M. Seyfarth, 1990 Cheney and Seyfarth enter the minds of vervet monkeys and other primates to explore the nature of primate intelligence and the evolution of cognition This reviewer had to be restrained from stopping people in the street to urge them to read it They would learn something of the way science is done something about how monkeys see their world and something about themselves the mental models they inhabit Roger Lewin Washington Post Book World A fascinating intellectual odyssey and a superb summary of where science stands Geoffrey Cowley Newsweek A once in the history of science enterprise Duane M Rumbaugh Quarterly Review of Biology

Aggression and Peacefulness in Humans and Other Primates James Silverberg, J. Patrick Gray, 1992 This book explores the role of aggression in primate social systems and its implications for human behavior Many people look to primate studies to see if and how we might be able to predict violent behavior in humans or ultimately to control war Of particular interest in the study of primate aggression are questions such as how do primates use aggression to maintain social organization what are the costs of aggression why do some primates avoid aggressive behavior altogether Students and researchers in primatology behavioral biology anthropology and psychology will read with interest as the editors and contributors to this book address these and other basic research questions about aggression They bring new information to the topic as well as an integrated view of aggression that combines important evolutionary considerations with developmental sociological and cultural perspectives Handbook of Peer Interactions, Relationships, and Groups Kenneth H. Rubin, William M. Bukowski, Brett Laursen, 2011-01-31 This comprehensive authoritative handbook covers the breadth of theories methods and empirically based findings on the ways in which children and adolescents contribute to one another s development Leading researchers review what is known about the dynamics of peer interactions and relationships from infancy through adolescence Topics include methods of assessing friendship and peer networks early romantic relationships individual differences and contextual factors in children s social and emotional competencies and behaviors group dynamics and the impact of peer relations on achievement social adaptation and mental health Salient issues in intervention and prevention are also addressed

Primate Sexuality Alan F. Dixson, 2012-01-26 Primate Sexuality provides a synthesis of current research on the evolution and physiological control of sexual behaviour in the primates prosimians monkeys apes and human beings This new edition has been updated and greatly expanded throughout to incorporate a decade of new research findings **Socioecology and Psychology of Primates** Russell H. Primate Behavior and Sociobiology A.B. Chiarelli, Robert Corruccini, 2012-12-06 The VIIIth International Congress of the International Prirnatological Society was held from 7 through

11 July 1980 in Florence Italy under the auspices of the host institution the Istituto di Antropologia of the University of Florence More than 300 papers and abstracts were presented either at the main Congress or in 14 pre Congress symposia the week earlier so scheduled to avoid conflicting with either the main invited lectures or the contributed paper sessions This volume consists of the contributed papers concerning primate behavior with special emphasis on those social aspects that reflect on or affect primate biology Clearly this is one of the more important and popular subdisciplines in primatology today We have thus restricted the subject in agreement with the publishers in order to ensure a successful and useful volume that is likely to be generally noticed and widely available as these up to date contributions deserve Furthermore we have compiled this volume in a fairly new way for congress proceedings In view of space limitations and the need to guarantee a high quality and sufficiently specialized book we subjected all manuscripts to a four level internal review process and selected only the best 23 of the 50 submissions We favored natural observation work over captive studies This rejection rate of 54% exceeds that of almost all reviewed scholarly journals

Evolution of Brain and Behavior in Vertebrates R.B. Masterton, M.E. Bitterman, C.B.G. Campbell, Nicholas Hotton, 2018-02-19 Originally published in 1976 the object of this volume was to present a relatively up to date overview of what was known what was suspected and what remained to be discovered concerning the general question of the evolution of the vertebrate brain and behaviour and to present a list of references for those who wanted to delve deeper into one or another aspect of the problem Accordingly it contains chapters by palaeontologists sensory morphologists and physiologists comparative neurologists and comparative psychologists The chapters are arranged in a sequence loosely approximating the order in which the various animals brain structures or behaviour first appeared Therefore the chapters fall naturally into sections each section directed to a group of vertebrates beginning with those which have very remote common ancestry and progressing to those with more recent common ancestry with mankind

Sociobiology and the Human Dimension Georg Breuer, 1983-01-13 This book is about animals and humans their common features and their gradual and principle differences It tells of democracy in baboons prostitution in hummingbirds bigamy in wrens baby sitting in jackals of chimpanzees at the computer console and of the super ego of dogs but it is also about the labour productivity of hunter and gatherer peoples incest avoidance in animals and humans and of the myths about matriarchy In a language accessible to any interested layman Georg Breuer gives a balanced account of the main ideas and achievements of sociobiology and the main criticisms levelled against it According to him sociobiology has given many a valuable impetus but sometimes presents a distorted or one sided view In particular it has not answered or addressed the question of why man and man only is able to identify and feel sympathy with any other human being The evolution of this most human of all traits confers on us the capability for charity and solidarity and for the happiness of true love which is unattainable by any animal

Primate Neuroethology Asif A. Ghazanfar, 2012-08-16 This edited volume is the first of its kind to bridge the epistemological gap between primate ethologists and primate neurobiologists Leading experts in

several fields review work ranging from primate foraging behavior to the neurophysiology of motor control from vocal communication to the functions of the auditory cortex *Anthropological and historical sciences. Aesthetics and the sciences of art* Jacques Havet, 2019-06-04 No detailed description available for Anthropological and historical sciences Aesthetics and the sciences of art *Human Adaptation* Yehudi A. Cohen, 2017-07-12 Underlying the anthropological study of humans is the principle that there is a reality to which a human must adapt for survival Populations must adapt to the realities of the physical world and maintain a proper fit between their biological makeup and the pressures of the various niches of the world Social groups must develop adaptive mechanisms in the organization of their social relations if there is to be order regularity and predictability in patterns of cooperation and competition This book presents an introduction to anthropology that is unified and made systematic by its focus on adaptations that have accompanied the evolution of humans from non human primates to inhabitants of vast urban areas in modern industrial societies Human Adaptation contains over forty outstanding essays that are intended to serve as an introduction to physical anthropology archeology and linguistics from the point of view of the processes of adaptation The organization of these selections contains a balance between biological and prehistoric cultural adaptations They provide coherence for the study of human evolution Several selections notably those in connection with linguistic adaptations deal with contemporary people in order to shed light on earlier evolutionary processes More than half of the selections deal with biological evolution This volume unifies the subject matter of anthropology within a single and powerful explanatory framework and incorporates the work of the most renowned anthropological experts on man **Interpersonal Communication** Kurt Danziger, 2016-06-06 Interpersonal Communication focuses on the basic processes of interpersonal communication emphasizing the importance of reciprocal influence processes in face to face interaction The topics discussed in this book include the manipulation of interpersonal communication dual aspect of human communication dimensions of social interaction nonverbal communication and social interaction in subhuman primates The psychotherapy as interpersonal communication study of disturbed communication in families and development of interpersonal communication in children are also deliberated This text likewise covers the cultural differences in interpersonal communication and study of interpersonal processes This publication is intended for social psychologists but is also a good reference for those working in related disciplines that require a social psychological treatment of the subject **Pretending and Imagination in Animals and Children** Robert W. Mitchell, 2002-02-21 It is well known that children s activities are full of pretending and imagination but it is less appreciated that animals can also show similar activities Originally published in 2002 this book focuses on comparing and contrasting children s and animals pretenses and imaginative activities In the text overviews of research present conflicting interpretations of children s understanding of the psychology of pretense and describe sociocultural factors which influence children s pretenses Studies of nonhuman primates provide examples of their pretenses and other simulative activities explore their representational and

imaginative capacities and compare their skills with children Although the psychological requirements for pretending are controversial evidence presented in this volume suggests that great apes and even monkeys may share capacities for imagination with children and that children's early pretenses may be less psychological than they appear

Animal Communication Networks P. K. McGregor, 2005-03-31 Most animal communication has evolved and now takes place in the context of a communication network i.e. several signallers and receivers within communication range of each other This idea follows naturally from the observation that many signals travel further than the average spacing between animals This is self evidently true for long range signals but at a high density the same is true for short range signals e.g. begging calls of nestling birds This book provides a current summary of research on communication networks and appraises future prospects It combines information from studies of several taxonomic groups insects to people via fiddler crabs fish frogs birds and mammals and several signalling modalities visual acoustic and chemical signals It also specifically addresses the many areas of interface between communication networks and other disciplines from the evolution of human charitable behaviour to the psychophysics of signal perception via social behaviour physiology and mathematical models

Psychology Library Editions: Comparative Psychology Various Authors, 2022-07-30 Psychology Library Editions Comparative Psychology 16 Volume set brings together a number of titles which explore animal behaviour and learning some in isolation but mostly comparing it with human behaviour Research in this area looks at many different issues using various methods and examines species from insects to primates The series of previously out of print titles originally published between 1928 and 1997 with the majority from the 1970s and 1980s includes contributions from many highly respected authors

On the Evolution of Human Behavior Peter C. Reynolds, 1981 Challenging many of the premises of conventional anthropological theory On the evolution of human behavior draws on recent evidence from psychobiology linguistics and ethology to trace the evolution of human social behavior from that of other primates Rejecting the assumption that significant behavioral discrepancies between man and other primate species stem from equally significant psychological differences Reynolds argues instead that small evolutionary changes may result in greatly increased complexity of behavior His frankly ethological theory of human origins assumes that reason and instinct evolve together and that instinctual mechanisms are necessary for the emergence of human culture book cover

Sociobiology Edward O. Wilson, 2000 When this work was first published it started a tumultuous round in the age old nature versus nurture debate It shows how research in human genetics and neuroscience has strengthened the case for biological understanding of human nature

The Individual and the Group Malcolm Pines, 2012-12-06 Malcolm Pines and Lise Rafaelsen The Seventh International Congress of Group Psychotherapy organized in Copenhagen by the International Association of Group Psychotherapy was one of the largest and most representative congresses on this subject that has yet been held Probably for the first time we achieved the declared aim of the International Association that of bringing together representatives of the different approaches to group psychotherapy in the

same forum to allow for communication exchange and development of our relationships. Previous congresses have been less representative and it seems to augur well for the future of the Association and of its congresses that there was this strong force and wish for unification and for exchange within the field of group psychotherapy. The Congress theme 'The Individual and the Group: Boundaries and Interrelations in Theory and Practice' was chosen because it gave an opportunity once again to examine the very basis for group psychotherapy as theory and as practice. The basic theme stated in the opening papers by Professor Marie Jahoda and Professor James Anthony was replayed daily with new developments and variations according to the theoretical position of each subsequent speaker.
