A Terrible Beauty is Born Brendan Curran, 2020-03-05 Genetics and its related technologies are revolutionizing the world The media is regularly dominated by controversy over the latest genetically modified GM food human gene therapy or cancer chip technology Maverick scientists are in the process of cloning humans and the human genome sequence is available on the Internet Fifty years ago we did *On Cloning* John Harris, 2004-07-31 Cloning few words have as much potential to grip our imagination or grab the headlines No longer the stuff of science fiction or Star Wars it is happening now Yet human cloning is currently banned throughout the world and therapeutic cloning banned in many countries In this highly controversial book John Harris does a lot more than ask why we are so afraid of cloning He presents a deft and informed defence of human cloning carefully exposing the rhetorical and highly dubious arguments against it He begins with an introduction to what a human clone is before tackling some of the most common and frequently bizarre criticisms of cloning Is it really wicked Can we regulate it What about the welfare of cloned children Does it turn human beings into commodities Dismissing one by one some of the myths about human cloning in particular that it is degrading and unsafe he astutely argues that some of our most cherished values such as the freedom to start a family and the freedom from state control actually support the case for human cloning Offering a brave and lucid insight into this ethical minefield John Harris at last shows that far from ending the diversity of human life or creating a race of super clones cloning has the power to improve and heal human life **Cloning** Stephen D. Fairbanks, 2004 The terms recombinant DNA technology DNA cloning molecular cloning or gene cloning all refer to the same process the transfer of a DNA fragment of interest from one organism to a self replicating genetic element such as a bacterial plasmid The DNA of interest can then be propagated in a foreign host cell This technology has been around since the 1970s and it has become a common practice in molecular biology labs today Reproductive cloning is a technology used to generate an animal that has the same nuclear DNA as another currently or previously existing animal Dolly was created by reproductive cloning technology In a process called somatic cell nuclear transfer SCNT scientists transfer genetic material from the nucleus of a donor adult cell to an egg whose nucleus and thus its genetic material has been removed The reconstructed egg containing the DNA from a donor cell must be treated with chemicals or electric current in order to stimulate cell division Once the cloned embryo reaches a suitable stage it is transferred to the uterus of a female host where it continues to develop until birth Therapeutic cloning also called embryo cloning is the production of human embryos for use in research The goal of this process is not to create cloned human beings but rather to harvest stem cells that can be used to study human development and to treat disease Stem cells are important to biomedical researchers because they can be used to generate virtually any type of specialised cell in the human body This new book presents an up to date Chronology of Cloning along with current and selected abstracts dealing with cloning as well as a guide to books on the topic Access to the abstract and books sections is provided by title subject and author indexes
