Test And Evaluation Trends And Costs For Aircraft And Guided Weapons:

Test and Evaluation Trends and Costs for Aircraft and Guided Weapons, 2004 As military systems have become more complex testing has become more time consuming and costly A number of efficiencies have been proposed and implemented such as increasing use of modeling and simulation and combining developmental and operational testing How have these approaches worked in practice And do traditional metrics for estimating the cost of testing still apply This study addressed these issues by examining system level testing for selected fixed wing aircraft missiles and guided munitions programs The actual times and costs appear to be largely in step with the increasing complexity of the systems and test programs so the proportion of development costs that the testing represents has not changed markedly Although the available data are not sufficient to isolate the effects of discrete initiatives some such as modeling and simulation and combined testing have empirically demonstrated their value on a variety of programs The authors provide cost estimating methodologies and reference information on the programs they studied

Sources of Weapon System Cost Growth Joseph George Bolten, 2008 Previous studies have shown that the Department of Defense DoD and the military departments have historically underestimated the cost of new weapon systems Quantifying cost growth is important but the larger issue is why cost growth occurs To address that issue this analysis uses data from Selected Acquisition Reports to examine 35 mature but not necessarily complete major defense acquisition programs similar to the type and complexity of those typically managed by the Air Force The programs are first examined as a complete set then Air Force and non Air Force programs are analyzed separately to determine whether the causes of cost growth in the two groups differ Four major sources of cost growth were identified 1 errors in estimation and scheduling 2 decisions made by the government 3 financial matters and 4 miscellaneous sources Total development plus procurement cost growth when measured as simple averages among the program set is dominated by decisions which account for more than two thirds of the growth Most decisions related cost growth involves quantity changes 22 percent requirements growth 13

percent and schedule changes 9 percent Cost estimation 10 percent is the only large contributor in the errors category Less than 4 percent of the overall cost growth is due to financial and miscellaneous causes Because decisions involving changes in requirements quantities and production schedules dominate cost growth program managers service leadership and Congress should look for ways to reduce changes in these areas

Historical Cost Growth of Completed Weapon System

Programs Mark V. Arena, 2006 This report is one of a series from a RAND Project AIR FORCE project The Cost of Future Military Aircraft Historical Cost Estimating Relationships and Cost Reduction Initiatives The purpose of the project is to improve the tools used to estimate the costs of future weapon systems It focuses on how recent technical management and government policy changes affect cost This report focuses on the accuracy of cost estimates For our analysis we used a very specific sample of Selected Acquisition Report SAR data namely only programs that are complete or are nearly so The analysis indicates a systematic bias toward underestimating the costs and substantial uncertainty in estimating the final cost of a weapon system In contrast to the previous literature the cost growth was higher than previously observed We also found few correlations with cost growth but observed that programs with longer duration had greater cost growth and electronics programs tended to have lower cost growth Although there were some differences in the mean cost growth factors among the military departments the differences were not statistically significant While newer programs appear to have lower cost growth this trend appears to be due to factors other than acquisition policies

Software Cost Estimation and Sizing

Methods Shari Lawrence Pfleeger, Felicia Wu, Rosalind Lewis, 2005 Recommends an approach to improving the utility and accuracy of software cost estimates by exposing uncertainty in understanding the project and reducing the risks associated with developing the estimates The approach focuses on characteristics of the estimation process such as which methods and models are most appropriate for a given situation and the nature of the data used such as software size describing symptoms and warning signs of risk in each factor and risk mitigation strategies

Is Weapon System Cost Growth Increasing? Obaid Younossi, 2007 In recent decades there have been numerous attempts to rein in the cost growth of U S Department of Defense DoD acquisition programs Cost growth is the ratio of the cost estimate reported in a program's final Selected Acquisition Report SAR and the cost estimate baseline reported in a prior SAR issued at a particular milestone Drawing on prior RAND research new analyses of completed and ongoing weapon system programs and data drawn from SARs this study addresses the following questions What is the cost growth of DoD weapon systems What has been the trend of cost growth over the past three decades To address the magnitude of cost growth it examines cost growth in completed programs to evaluate the cost growth trend over time it provides additional analysis of a selection of ongoing programs This sample of ongoing programs permits a look at growth trends in the more recent past Changes in the mix of system types over time and dollar weighted analysis were also considered because earlier studies have suggested that cost growth varies by program type and the cost of the program The findings suggest that development cost growth over the past three decades has

remained high and without any significant improvement

Verification, Validation, and Testing of Engineered Systems Avner Engel, 2010-11-19 Systems Verification Validation and Testing VVT are carried out throughout systems lifetimes Notably quality cost expended on performing VVT activities and correcting system defects consumes about half of the overall engineering cost Verification Validation and Testing of Engineered Systems provides a comprehensive compendium of VVT activities and corresponding VVT methods for implementation throughout the entire lifecycle of an engineered system In addition the book strives to alleviate the fundamental testing conundrum namely What should be tested How should one test When should one test And when should one stop testing In other words how should one select a VVT strategy and how it be optimized The book is organized in three parts The first part provides introductory material about systems and VVT concepts This part presents a comprehensive explanation of the role of VVT in the process of engineered systems Chapter 1 The second part describes 40 systems development VVT activities Chapter 2 and 27 systems post development activities Chapter 3 Corresponding to these activities this part also describes 17 non testing systems VVT methods Chapter 4 and 33 testing systems methods Chapter 5 The third part of the book describes ways to model systems quality cost time and risk Chapter 6 as well as ways to acquire quality data and optimize the VVT strategy in the face of funding time and other resource limitations as well as different business objectives Chapter 7 Finally this part describes the methodology used to validate the quality model along with a case study describing a system s quality improvements Chapter 8 Fundamentally this book is written with two categories of audience in mind The first category is composed of VVT practitioners including Systems Test Production and Maintenance engineers as well as first and second line managers The second category is composed of students and faculties of Systems Electrical Aerospace Mechanical and Industrial Engineering schools This book may be fully covered in two to three graduate level semesters although parts of the book may be covered in one semester University instructors will most likely use the book to provide engineering students with knowledge about VVT as well as to give students an introduction to formal modeling and optimization of VVT strategy

Budget Estimating Relationships for Depot-level Repairables in the Air Force Flying Hour Program Gregory G. Hildebrandt, 2007 Budget estimating relationships BERs for flying depot level repairables DLRs explain the direct effect of specified variables on obligated funds associated with spare parts that directly support the U S Air Force USAF Flying Hour Program In FY02 net sales of DLRs to Air Force commands hit historic highs To provide the Air Force Cost Analysis Improvement Group with a tool to better understand the commands budgetary submissions we develop several explanatory BERs to understand why flying DLRs are at their particular levels Using longitudinal regression statistical methods we

explain the historical net sales of flying DLRs using estimating models that relate net sales to the contemporaneous values of aircraft characteristics operational tempo and time related variables This is but one part of a larger project to develop better estimating methods for use by the acquisition community and to examine the impact of Air Force and DoD policies on weapon system costs The findings will also be of interest to those in the national security community who are involved in analyzing alternative military postures and to members of the aircraft industry s analytical community *Department of the Navy and Air Force Combat Aviation Programs* United States.
