Drum, 2012-12-06 The eleventh Symposium of the International Research Group on Colour Vision Deficiencies IRGCDV was held 20-23 June 1991 in Sydney Australia ably hosted by local organizer Stephen Dain A total of 35 talks and 10 posters were presented Papers based on 37 of these presentations are included here in Colour Vision Deficiencies XI The scientific program featured sessions on three special topics with each topic highlighted by an invited speaker The opening session on the Genetics of congenital colour vision deficiencies began with a superb invited lecture by Charles Weitz about his pioneering work on the molecular genetics of tritanopia The session on the second special topic Spatial aspects of colour vision began with the launching of a new IRGCDV tradition as 1991 Verriest Memorial Award recipient Harry Sperling presented the first Verriest Memorial Lecture on his recent studies of spatial discrimination of heterochromatic stimuli Dr Sperling reported new evidence that certain asymmetries in red-green opponent colour vision can be explained by the spatial organization of colour opponent retinal neurons In the third special session on Occupational aspects of colour vision Barry Cole took the audience on a fascinating tour of the historical development of colour vision standards in his invited lecture entitled Does defective colour vision really matter In addition to the three special topics many interesting presentations were given in topical sessions on Variations in normal colour vision Acquired colour vision deficiencies and Colour vision tests and testing methods      Cumulated Index Medicus, 1972      Photogrammetric Computer Vision Wolfgang Förstner, Bernhard P. Wrobel, 2016-10-04 This textbook offers a statistical view on the geometry of multiple view analysis required for camera calibration and orientation and for geometric scene reconstruction based on geometric image features The authors have backgrounds in geodesy and also long experience with development and research in computer vision and this is the first book to present a joint approach from the converging fields of photogrammetry and computer vision Part I of the book provides an introduction to estimation theory covering aspects such as Bayesian estimation variance components and sequential estimation with a focus on the statistically sound diagnostics of estimation results essential in vision metrology Part II provides tools for 2D and 3D geometric reasoning using projective geometry This includes oriented projective geometry and tools for statistically optimal estimation and test of geometric entities and transformations and their relations tools that are

useful also in the context of uncertain reasoning in point clouds Part III is devoted to modelling the geometry of single and multiple cameras addressing calibration and orientation including statistical evaluation and reconstruction of corresponding scene features and surfaces based on geometric image features The authors provide algorithms for various geometric computation problems in vision metrology together with mathematical justifications and statistical analysis thus enabling thorough evaluations The chapters are self contained with numerous figures and exercises and they are supported by an appendix that explains the basic mathematical notation and a detailed index The book can serve as the basis for undergraduate and graduate courses in photogrammetry computer vision and computer graphics It is also appropriate for researchers engineers and software developers in the photogrammetry and GIS industries particularly those engaged with statistically based geometric computer vision methods
