Cogel, 1967 Under flight conditions as well as in other situations judgments of the distances between objects may depend upon a variety of possible cues In this study the hypothesis was tested that the intention to use a particular cue relation would enhance the effectiveness of that particular cue in determining the resulting perception For this purpose a situation was presented in which the apparent depth position of an object in a configuration of objects would differ depending upon which of two possible cue relations size cues were used The results support the conclusion that the perceived depth position of the object differed in the expected directions as a function of the task set The data of the study are discussed with respect to the adjacency principle which states that cue efficiency is determined by the relative adjacency of objects between which the cues occur Although the effect of cue set upon the perception seems to be small compared with that of adjacency it cannot completely be ignored Author      *Multitasking: Executive Functioning in Dual-Task and Task Switching Situations* Tilo Strobach, Mike Wendt, Markus Janczyk, 2018-03-27 Multitasking refers to performance of multiple tasks The most prominent types of multitasking are situations including either temporal overlap of the execution of multiple tasks i e dual tasking or executing multiple tasks in varying sequences i e task switching In the literature numerous attempts have aimed at theorizing about the specific characteristics of executive functions that control interference between simultaneously and or sequentially active component of task sets in these situations However these approaches have been rather vague regarding explanatory concepts e g task set inhibition preparation shielding capacity limitation widely lacking theories on detailed mechanisms and or empirical evidence for specific subcomponents The present research topic aims at
