Biologically Inspired Approaches to Advanced Information Technology Auke Jan Ijspeert, Masayuki Murata, Naoki Wakamiya, 2004-10-22 The evolution of the Internet has led us to the new era of the information infrastructure As the information systems operating on the Internet are getting larger and more complicated it is clear that the traditional approaches based on centralized mechanisms are no longer meaningful One typical example can be found in the recent growing interest in a P2P peer to peer computing paradigm It is quite different from the Web based client server systems which adopt essentially centralized management mechanisms The P2P computing environment has the potential to overcome bottlenecks in Web computing paradigm but it introduces another difficulty a scalability problem in terms of information found if we use a brute force flooding mechanism As such conventional information systems have been designed in a centralized fashion As the Internet is deployed on a world scale however the information systems have been growing and it becomes more and more difficult to ensure fault free operation This has long been a fundamental research topic in the field A complex information system is becoming more than we can manage For these reasons there has recently been a significant increase in interest in biologically inspired approaches to designing future information systems that can be managed efficiently and correctly

Removing the Commons Eric Roark, 2013-08-28 Removing the Commons examines the moral condition in which people can remove through either use or appropriation natural resources from the commons This task begins with a robust defense of the view that natural resources initially belong to all people Granting that natural resources initially belong to all people it follows that all people have a claim that limits the way in which others may go about taking or removing natural resources from the commons In assessing these limitations Eric Roark argues for a Lockean left libertarian theory of justice in which all people have the right of self ownership and may only remove natural resources from the commons if they adhere to the Lockean Proviso by leaving enough and as good for others Roark's account goes beyond existing treatments of the Lockean Proviso by insisting that the duty to leave enough and as good for others applies not merely to those who appropriate natural resources from the commons but also to those who use natural resources within the commons Removing the Commons defends a Georgist interpretation of the Lockean Proviso in which those who remove natural resources from the commons must pay the competitive rent of their removal in a fashion that best promotes equal opportunity for welfare Finally Roark gives extended consideration to the implications that the developed Lockean Left
