**Nuclear Magnetic Resonance** G A Webb, 2007-10-31 As a spectroscopic method Nuclear Magnetic Resonance NMR has seen spectacular growth over the past two decades both as a technique and in its applications Today the applications of NMR span a wide range of scientific disciplines from physics to biology to medicine Each volume of Nuclear Magnetic Resonance comprises a combination of annual and biennial reports which together provide comprehensive coverage of the literature on this topic This Specialist Periodical Report reflects the growing volume of published work involving NMR techniques and applications in particular NMR of natural macromolecules which is covered in two reports NMR of Proteins and Acids and NMR of Carbohydrates Lipids and Membranes For those wanting to become rapidly acquainted with specific areas of NMR this title provides unrivalled scope of coverage Seasoned practitioners of NMR will find this an invaluable source of current methods and applications Specialist Periodical Reports provide systematic and detailed review coverage in major areas of chemical research Compiled by teams of leading authorities in the relevant subject areas the series creates a unique service for the active research chemist with regular in depth accounts of progress in particular fields of chemistry Subject coverage within different volumes of a given title is similar and publication is on an annual or biennial basis

*Organometallic Chemistry* E W Abel, F G A Stone, 2007-10-31 Organometallic chemistry is an interdisciplinary science which continues to grow at a rapid pace Although there is continued interest in synthetic and structural studies the last decade has seen a growing interest in the potential of organometallic chemistry to provide answers to problems in catalysis synthetic organic chemistry and also in the development of new materials This Specialist Periodical Report aims to reflect these current interests reviewing progress in theoretical organometallic chemistry main group chemistry the lanthanides and all aspects of transition metal chemistry Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new

name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume     Amino Acids, Peptides and Proteins J. S. Davies, 2000 In an ever increasing domain of activity Amino Acids Peptides and Proteins provides an annual compilation of the world's research effort into this important area of biological chemistry Volume 31 provides a review of literature published during 1998 Comprising a comprehensive review of significant developments at this biology chemistry interface each volume opens with an overview of amino acids and their applications Work on peptides is reviewed over several chapters ranging from current trends in their synthesis and conformational and structural analysis to peptidomimetics and the discovery of peptide related molecules in nature The application of advanced techniques in structural elucidation is incorporated into all chapters whilst periodic chapters on metal complexes of amino acids peptides and beta lactams extend the scope of coverage Efficient searching of specialist topics is facilitated by the sub division of chapters into discrete subject areas allowing annual trends to be monitored All researchers in the pharmaceutical and allied industries and at the biology chemistry interface in academia will find this an indispensable reference source     Spectroscopic Properties of Inorganic and Organometallic Compounds , 1975

**Spectroscopic Properties of Inorganic and Organometallic Compounds; Volume 28** Davidson G., 1995

**Infrared and Raman Spectra of Inorganic and Coordination Compounds, Part B** Kazuo Nakamoto, 2009-01-16 The 6th edition of this classic comprises the most comprehensive guide to infrared and Raman spectra of inorganic organometallic bioinorganic and coordination compounds From fundamental theories of vibrational spectroscopy to applications in a variety of compound types it is extensively updated Part B details applications of Raman and IR spectroscopy to larger and complex systems It covers interactions of cisplatin and other metallodrugs with DNA and cytochrome c oxidase and peroxidase This is a great reference for chemists and medical professionals working with infrared or Raman spectroscopies and for graduate students
