Spectroscopy and Photochemistry of Uranyl Compounds Eugene Rabinowitch, R. Linn Belford, 2013-10-22

Spectroscopy and Photochemistry of Uranyl Compounds is a guide to the research and physics of the actinide elements particularly the uranyl ion. The book is introduced with the subject of the spectroscopy of uranyl salts in the solid state. Studies dealing with the fluorescence and absorption spectra of solid uranyl salts through band measurements and empirical classification term analysis and fluorescence spectrum in relation to excitation by light of various wavelengths are then discussed. The book also mentions the analysis of the uranyl spectrum by Dieke and co workers because of the precise measurements of the fluorescence and absorption bands obtained under the Manhattan project. The table determined by Pant and Sakhwalkar in their study of the fluorescence spectrum of solid hydrated uranyl fluoride at 185 degrees centigrade is presented. The text also discusses the theory of electronic structure and spectra of the uranyl ion. The spectroscopy of uranyl compounds in solution and the uranyl fluorescence intensity and decay are then presented. The book then explains the process of measuring the intensity of slowly decaying fluorescence of uranyl salts. The primary photochemical reactions in uranyl compounds are found to be slow giving rise to many secondary thermal reactions that may be unwanted. Researchers in the fields of chemistry and physics working on actinide elements will find this collection of monographs invaluable.

Rabinowitch, 1964 **Nuclear Science Abstracts**, 1975 Uranium Peter C. Burns, Robert J. Finch, 2018-12-17 Volume 38 of Reviews in Mineralogy provides detailed reviews of various aspects of the mineralogy and geochemistry of uranium. We have attempted to produce a volume that incorporates most important aspects of uranium in natural systems while providing some insight into important applications of uranium mineralogy and geochemistry to environmental problems. The result is a blend of perspectives and themes historical. Chapter 1 crystal structures Chapter 2 systematic mineralogy and paragenesis Chapters 3 and 7 the genesis of uranium ore deposits Chapters 4 and 6 the geochemical behavior of uranium and other actinides in natural fluids Chapter 5 environmental aspects of uranium such as microbial effects groundwater contamination and disposal of nuclear waste Chapters 8 9 and 10 and various analytical techniques applied to uranium bearing phases Chapters 11 14 This volume was written in preparation for a short course by the same title sponsored by the Mineralogical Society of America October 22 and 23 1999 in Golden Colorado prior to MSA's joint annual meeting with the Geological Society of America **Bibliographies of Interest to the Atomic Energy Program, 1962 Through 1966** U.S. Atomic Energy Commission, 1968 **Recent Progress in Computational Sciences and Engineering (2 vols)** Theodore Simos, 2019-05-07 This volume brings together selected contributed papers presented at the International Conference of Computational Methods in Science and Engineering ICCMSE 2006 held in Chania Greece October 2006. The conference aims

to bring together computational scientists from several disciplines in order to share methods and ideas The ICCMSE is unique in its kind It regroups original contributions from all fields of the traditional Sciences Mathematics Physics Chemistry Biology Medicine and all branches of Engineering It would be perhaps more appropriate to define the ICCMSE as a conference on computational science and its applications to science and engineering Topics of general interest are Computational Mathematics Theoretical Physics and Theoretical Chemistry Computational Engineering and Mechanics Computational Biology and Medicine Computational Geosciences and Meteorology Computational Economics and Finance Scientific Computation High Performance Computing Parallel and Distributed Computing Visualization Problem Solving Environments Numerical Algorithms Modelling and Simulation of Complex System Web based Simulation and Computing Grid based Simulation and Computing Fuzzy Logic Hybrid Computational Methods Data Mining Information Retrieval and Virtual Reality Reliable Computing Image Processing Computational Science and Education etc More than 800 extended abstracts have been submitted for consideration for presentation in ICCMSE 2005 From these 500 have been selected after international peer review by at least two independent reviewers

The Chemistry of the Actinides S. Ahrland, K. W. Bagnall, D. Brown, 2016-06-07 The Chemistry of the Actinides contains selected chapters from the Comprehensive Inorganic Chemistry to meet the needs of certain specialists in this field The book describes the 14 elements after actinium in the Periodic Table known as the actinide elements or the 5f transition series The book notes the occurrence separation chemical properties chemical structures and preparation of the metals In a discussion of analytical chemistry the radioactive properties of the actinides and the lanthanides are compared The text then describes the nuclear or radiochemical records and chemical properties of the different members of the actinide series such as thorium uranium plutonium and einsteinium The book also explains the differences between the 5f shell and the 4f shell One paper then discusses the groups of alloy compounds including rare earths and intra actinides Another paper examines the general properties of actinide ions as to their electronic structure and oxidation states the stability and preparation of the different oxidation states and the applicability of solvent extraction in separating and purifying various substances The text is suitable for researchers in organic chemistry nuclear and atomic physicists scientists and academicians whose work involves radioactive materials
