one of the most important goals of humankind Since ancient times people have been using potions natural products and even the dust of mummies for the treatment of health problems The healing effects of remedies were often ascribed to spirits and mythical entities but some of the herbal preparations did possess curative properties In the 1800 s scientists began to investigate potions to determine what chemicals were present that could cause the observed healing Thus the early days of medicinal chemistry began with the study of naturally occurring materials that were effective in treating human disorders The studies were tedious and required much sample purification and structure determination at a time when instrumental methods of analysis were unavailable Also screening methods for chemical efficacy against disease had to be developed so that humans were not used as trials The book builds on the history of drug development but does not assume much background knowledge The focus is on building upon the understandings of the molecular function of drugs and from there taking a broad overview of the topical issues and most frequently used techniques
