Speech Analysis:

Expression in Speech Mark Tatham, Katherine Morton, 2003-10-16 This book is about the nature of expression in speech. It is a comprehensive exploration of how such expression is produced and understood and of how the emotional content of spoken words may be analysed, modelled, tested and synthesized. Listeners can interpret tone of voice, assess emotional pitch and effortlessly detect the finest modulations of speaker attitude, yet these processes present almost intractable difficulties to the researchers seeking to identify and understand them. In seeking to explain the production and perception of emotive content, Mark Tatham and Katherine Morton review the potential of biological and cognitive models. They examine how the features that make up the speech production and perception systems have been studied by biologists, psychologists and linguists and assess how far biological, behavioural and linguistic models generate hypotheses that provide insights into the nature of expressive speech. The authors use recent techniques in speech synthesis and automatic speech recognition as a test bed for models of expression in speech. Acknowledging that such testing presupposes a comprehensive computational model of speech production, they put forward original proposals for its foundations and show how the relevant data structures may be modelled within its framework. This pioneering book will be of central interest to researchers in linguistics and in speech science, pathology and technology. It will also be valuable for behavioural and cognitive scientists wanting to know more about this vital and elusive aspect of human behaviour. Speech and Audio Processing Ian Vince McLoughlin, 2016-07-21 With this comprehensive and accessible introduction to the field, you will gain all the skills and knowledge needed to work with current and future audio speech and hearing processing technologies. Topics covered include mobile telephony, human computer interfacing through speech, medical applications of speech and hearing technology, electronic music, audio compression and reproduction, big data audio systems and the analysis of sounds in the environment. All of this is supported by numerous practical illustrations, exercises and hands-on MATLAB examples on topics as diverse as psychoacoustics, including some auditory illusions, voice changers, speech compression, signal analysis and visualisation, stereo processing, low frequency ultrasonic scanning and machine learning techniques for big data. With its pragmatic and application-driven focus and concise explanations, this is an essential resource for anyone who wants to rapidly gain a practical understanding of speech and audio processing and technology. The Acoustic Analysis of Speech Raymond D. Kent, Charles Read, 1992 Often cited as the most important human faculty, speech remains the focus of intensive study by specialists in such diverse fields as linguistics, psychology, physiology, engineering, computer science, speech pathology and neurology. **Report**, 1954 Contemporary American Speeches Richard L. Johannesen, 2000 Contains a collection of transcripts of contemporary American speeches providing brief biographical information on the author of each speech as well as critical and historical context. Includes CD-ROM with forty-two significant speeches. **An Introduction to the Science of Phonetics** Nigel Hewlett, Janet Mackenzie Beck, 2013-04-03 The book is designed as an introduction to the scientific study

of speech No prior knowledge of phonetics is assumed As far as mathematical knowledge is concerned all that is assumed is a knowledge of simple arithmetic and as far as possible concepts are dealt with on an intuitive rather than mathematical level The anatomical material is all fully explained and illustrated The book is arranged in four parts Part 1 Basic Principles provides an introduction to established phonetic theory and to the principles of phonetic analysis and description including phonetic transcription Part 2 Acoustic Phonetics considers the physical nature of speech sounds as they pass through the air between speaker and hearer It includes sections on temporal measurement fundamental frequency spectra and spectrograms Part 3 Auditory Phonetics covers the anatomy of the ear and the perception of loudness pitch and quality The final part Part 4 covers the articulatory production of speech and shows how experimental techniques and tools can enhance our understanding of the complexities of speech production Though the audience for this book is mainly students and professors in the Speech Sciences it will also be valuable to any students studying hearing science and acoustics The book is well supported with figures tables and practice boxes with experiments

Antonio Camurri, Gualtiero Volpe, 2011-04-02 Research on the multifaceted aspects of modeling analysis and synthesis of man

gesture is receiving growing interest from both the academic and industrial communities. On one hand, recent scientific developments on cognition, on affect, emotion, on multimodal interfaces and on multimedia have opened new perspectives on the integration of more sophisticated models of gesture in computer systems. On the other hand, the consolidation of new technologies enabling disappearing computers and multimodal interfaces to be integrated into the natural environments of users are making it realistic to consider tackling the complex meaning and subtleties of human gesture in multimedia systems, enabling a deeper user-centered, enhanced physical participation and experience in the human-machine interaction process. The research programs supported by the European Commission and several national institutions and governments individuated in recent years, strictly concerned with gesture research. For example, the DG Information Society of the European Commission (www.cordis.lu) lists and supports several initiatives such as the Disappearing Computer and Presence EU IST FET Future and Emerging Technologies, the IST program Interfaces Enhanced Audio Visual Services (see for example the project MEGA Multisensory Expressive Gesture Applications www.megaproject.org) and the IST strategic initiative Multimodal Interfaces. Several EC projects and other funded research are represented in the chapters of this book. A wider range of applications can benefit from advances in research on gesture from consolidated areas such as surveillance to new or emerging fields such as therapy and rehabilitation, home consumer goods, entertainment and audiovisual cultural and artistic applications, just to mention only a few of them.
