Speed Of Perception:

Influence Mechanism of Visual Perception on Driver's Speed Control and Steering Behaviors Bing Liu, Jing Xia, Zipei Zhang, Naikan Ding, Wuxiong Peng, 2018-09-17 Visual perception and its relationship to the subsequent manipulative behaviors are fundamental for people to recognize the world. The most important manipulations of drivers are speed control and steering which could possibly guarantee a safe driving. So to avoid accidents the driver does a series of judgments, decisions and actions which could be impacted by the visual information it perceived. Over the past few decades, visual perception has gradually gone from the psychology domain to its relevant fields like the transportation science and engineering to play a more important role in the human factors in transportation. This book presents the state of the art in speed perception and its application with a kind of edge rate markings installed on roadways with empirical on-road experiments and field observations of naturalistic driving data. Reaching a great combination of the fundamental theory in cognitive psychology and the issues in traffic and transportation engineering, this book is one of the most practical and up-to-date references available on the subject of influence of visual perception on drivers' speed control and steering behaviors. This allows the knowledge of visual perception and transportation to be accessible to a wider range of audiences and also introduces new thoughts and new methods for decision makers/practitioners in dealing with traffic safety or related issues. The fundamental concepts, experimental process, statistical analyses and comprehensive discussions are covered in detail, providing the readers a systematic understanding of the field.

Social Perception M.D. Rutherford, Valerie A. Kuhlmeier, 2013-08-30 An interdisciplinary exploration of perceptual and cognitive processes underlying the ability to perceive social information drawing on current research and new experimental techniques. As we enter a room full of people we instantly have a number of social perceptions. We have an automatic perception of others as subjective agents with their own points of view, thoughts and goals, and we can quickly interpret minimal visual information to infer that something is animate. This book explores the perceptual and cognitive processes that allow humans to perceive and understand this social information quickly and apparently effortlessly. Top researchers in fields ranging from developmental psychology to vision science consider the perception of biological and animate motion inferences based on this motion and the early development of these abilities. These innovative contributions reflect a recent renewal of interest in the attribution of agency and the understanding of goal-directed behavior which has been accompanied by a rapid increase in empirical discoveries enabled by such new experimental techniques as brain imaging. The research presented in *Social Perception* suggests that an intuitive understanding of others is an integral part of human psychology, develops early, relies on a network of brain regions and may be compromised in autism.
