Sintering'85 Hayne Palmour, 2012-12-06 This volume contains the edited Proceedings of the Sixth World Round Table Conference on Sintering held in Herceg Novi Yugoslavia on September 26 1985 It was organized by the International Institute for the Science of Sintering IISS headquartered in Beograd Every fourth year since 1969 the Institute has organized such a Round Table Conference on Sintering each has taken place at some selected location within Yugoslavia A separate series of IISS Summer Schools have also been held at four year intervals but they have been offset by about two years so they occur between the main Conferences As a rule the Summer Schools have been devoted to more specific topics and they also take place in different countries The aim of these Conferences and their related Summer Schools has been to bring together scientists from all over the world who work in various fields of science and technology concerned with sintering and sintered materials A total of six IISS Conferences have been held over the period 1969-1985 and they have been supplemented by the three Summer Schools held in Yugoslavia Poland and India in 1975 1979 and 1983 respectively This most recent five day Conference addressed the fundamental scientific background as well as the technological state of the art in sintering and sintered materials It encompassed many of the high technology sintered materials needed for a wide variety of research and industrial applications

Sintering: From Empirical Observations to Scientific Principles Randall German, 2014-02-07 As sintering applications march toward a 30 billion global business the models for sintering have progressed but generally follow behind observation Documentation of the steps needed to build to a quantitative and predictive theory are often missed *Sintering From Empirical Observations to Scientific Principles* partitions sintering applications and observations to show critical turning points required to establish modern sintering as a predictive science This book written by the most cited author in his field is laced with people organizations critical steps and important formulations in a mixture of history personalities and applications Exploring how insights in seemingly unrelated fields sparked progress it is also a teaching tool to show where there is success where there are problems and how to organize teams to leapfrog to new applications or plateaus of use Randall German's *Sintering From Empirical Observations to Scientific Principles* is a platform for directly addressing the critical control parameters in these new research and development efforts Shows how the theories and understanding of sintering were developed and improved over time and how different products were developed ultimately leading to important knowledge and lessons for solving real sintering problems Covers all the necessary infrastructure of sintering theory and practice such as atomic theory surface energy microstructure and measurement and observation tools Introduces the history and development of such early sintered products as porcelain tungsten lamp filaments bronze bearings steel automotive components platinum crucibles and more
