Special Values Of Dirichlet Series Monodromy And The Periods Of Automorphic Forms:

Special Values of Dirichlet Series, Monodromy, and the Periods of Automorphic Forms Peter Stiller, 1984 Special Values of Dirichlet Series, Monodromy, and the Periods of Automorphic Forms Peter Stiller, 1984 In this paper we explore a relationship that exists between the classical cusp form for subgroups of finite index in $SL_2(\mathbb{Z})$ and certain differential equations and we develop a connection between the equation's monodromy representation and the special values in the critical strip of the Dirichlet series associated to the cusp form **Special Values of Dirichlet Series, Monodromy, and the Periods of Automorphic Forms** George E. Andrews, James Damon, Linda S. Ford, Minking Eie, Octavio Carlos García, Peter Stiller, Richard Askey, William G. Bade, Jay Mathers Savage, 1984 *Mixed Automorphic Forms, Torus Bundles, and Jacobi Forms* Min Ho Lee, 2004-04-30 This volume deals with various topics around equivariant holomorphic maps of Hermitian symmetric domains and is intended for specialists in number theory and algebraic geometry In particular it contains a comprehensive exposition of mixed automorphic forms that has never yet appeared in book form The main goal is to explore connections among complex torus bundles mixed automorphic forms and Jacobi forms associated to an equivariant holomorphic map Both number theoretic and algebraic geometric aspects of such connections and related topics are discussed **Transcendental Numbers** M. Ram Murty, Purusottam Rath, 2014-06-24 This book provides an introduction to the topic of transcendental numbers for upper level undergraduate and graduate students The text is constructed to support a full course on the subject including descriptions of both relevant theorems and their applications While the first part of the book focuses on introducing key concepts the second part presents more complex material including applications of Baker's theorem Schanuel's conjecture and Schneider's theorem These later chapters may be of interest to researchers interested in examining the relationship between transcendence and L functions Readers of this text should possess basic knowledge of complex analysis and elementary algebraic number theory *Transcendence in Algebra, Combinatorics, Geometry and Number Theory* Alin Bostan, Kilian Raschel, 2021-11-02 This proceedings volume gathers together original articles and survey works that originate from presentations given at the conference Transient Transcendence in Transylvania held in Braşov Romania from May 13th to 17th 2019 The conference gathered international experts from various fields of mathematics and computer science with diverse interests and viewpoints on transcendence The covered topics are related to algebraic and transcendental aspects of special functions and special numbers arising in algebra combinatorics geometry and number theory Besides contributions on key topics from invited speakers this volume also brings selected papers from attendees **Automorphic Forms and the Picard Number of an Elliptic Surface** Peter F. Stiller, 2013-04-17 In studying an algebraic surface E which we assume is non singular and projective over the field of complex numbers \mathbb{C} it is natural to study the curves on this surface In order to do this one introduces various equivalence relations on the group of divisors cycles of codimension one One such relation is algebraic equivalence and we denote by NS

The group of divisors modulo algebraic equivalence which is called the Néron-Severi group of the surface E . This is known to be a finitely generated abelian group which can be regarded naturally as a subgroup of $2H(E, \mathbb{Z})$. The rank of $NS(E)$ will be denoted p and is known as the Picard number of E . Every divisor determines a cohomology class in $H^2(E, \mathbb{Z})$ which is of type $(1, 1)$ that is to say a class in $H^{2,0}(E)$ which can be viewed as a 2-subspace of $H^2(E, \mathbb{Z})$ via the Hodge decomposition. The Hodge Conjecture asserts in general that every rational cohomology class of type (p, p) is algebraic. In our case this is the Lefschetz Theorem on 1-classes. Every cohomology class in $2H(E, \mathbb{Z})$ is the class associated to some divisor. Here we are writing $2H(E, \mathbb{Z})$ for the image under the natural mapping into $H^2(E, \mathbb{Z})$. Thus $NS(E)$ modulo 2-torsion is isomorphic to $H^{2,0}(E)$ and the bilinear form measures the pairing on the cohomology.

Jacobi-Like Forms, Pseudodifferential Operators, and Quasimodular Forms Youngju Choie, Min Ho Lee, 2019-11-20. This book explores various properties of quasimodular forms especially their connections with Jacobi-like forms and automorphic pseudodifferential operators. The material that is essential to the subject is presented in sufficient detail including necessary background on pseudodifferential operators, Lie algebras, etc. to make it accessible also to non-specialists. The book also covers a sufficiently broad range of illustrations of how the main themes of the book have occurred in various parts of mathematics to make it attractive to a wider audience. The book is intended for researchers and graduate students in number theory.

Mathematical Reviews, 2004 *Notices of the American Mathematical Society* American Mathematical Society, 1987 *Reviews in Number Theory*, 1984-96, 1997. These six volumes include approximately 20,000 reviews of items in number theory that appeared in *Mathematical Reviews* (MR) between 1984 and 1996. This is the third such set of volumes in number theory; the first was edited by W. J. LeVeque and included reviews from 1940-1972; the second was edited by R. K. Guy and appeared in 1984.

Acta arithmetica, 2003 *Catalogue, Books and Journals in Advanced Mathematics* American Mathematical Society, 1985 *Panamerican Mathematical Journal*, 1994 **CRM Proceedings & Lecture Notes**, 2001 *CMUC*, 2008 **P-adic Monodromy and the Birch and Swinnerton-Dyer Conjecture** Glenn Stevens, 1994. The workshop aimed to deepen understanding of the interdependence between p -adic Hodge theory, analogues of the conjecture of Birch and Swinnerton-Dyer, p -adic uniformization theory, p -adic differential equations, and deformations of Galois representations.

Multiple Zeta Functions, Multiple Polylogarithms And Their Special Values Jianqiang Zhao, 2016-03-07. This is the first introductory book on multiple zeta functions and multiple polylogarithms which are the generalizations of the Riemann zeta function and the classical polylogarithms respectively to the multiple variable setting. It contains all the basic concepts and the important properties of these functions and their special values. This book is aimed at graduate students, mathematicians, and physicists who are interested in this current active area of research. The book will provide a detailed and comprehensive introduction to these objects, their fascinating properties, and interesting relations to other mathematical subjects and various generalizations such as their q -analogs and their finite versions by taking partial sums modulo suitable prime powers. Historical notes and exercises are provided at the end of each chapter.
