Seyffert, 2001 The vast open plains of the Texas Panhandle appear deceptively void of bird life but subtle regional variations provide rich and varied avifauna Of the approximately six hundred species of birds sighted in Texas more than two thirds have been confirmed on the Texas Panhandle The wooded waterways of the plains of the eastern Panhandle attract such eastern nesting species as the Red headed Woodpecker and Carolina Chickadee The gently rolling terrain of the High Plains and its scattered rainwater lakes or playas provide a winter habitat for a variety of migrating waterfowl Canyons etched deeply into the otherwise flat terrain create sheltered places where such western birds as the Western Scrub Jay and Bushtit thrive and breed For each of the more than four hundred species found in this region author Kenneth D Seyffert provides information on the bird s status occurrence and nesting habits Ten elegant line drawings also accompany the text *Birds of the Texas Panhandle* is a must for those already familiar with the avifauna of the Panhandle and an eyeopener for those skeptical of the abundance of bird life in the region Residents fo the Panhandle will find this a handy reference to places where they can view their winged neighbors **Occasional Papers of the Museum of Natural History, the University of Kansas** John D.
