Specification Searches Ad Hoc Inference With Nonexperimental Data:

Specification Searches E. E. Leamer, 1978-04-24 Offers a radically new approach to inference with nonexperimental data when the statistical model is ambiguously defined Examines the process of model searching and its implications for inference Identifies six different varieties of specification searches discussing the inferential consequences of each in detail

Case Studies in Applied Bayesian Data Science Kerrie L. Mengersen, Pierre Pudlo, Christian P. Robert, 2020-05-28 Presenting a range of substantive applied problems within Bayesian Statistics along with their Bayesian solutions this book arises from a research program at CIRM in France in the second semester of 2018 which supported Kerrie Mengersen as a visiting Jean Morlet Chair and Pierre Pudlo as the local Research Professor The field of Bayesian statistics has exploded over the past thirty years and is now an established field of research in mathematical statistics and computer science a key component of data science and an underpinning methodology in many domains of science business and social science Moreover while remaining naturally entwined the three arms of Bayesian statistics namely modelling computation and inference have grown into independent research fields While the research arms of Bayesian statistics continue to grow in many directions they are harnessed when attention turns to solving substantive applied problems Each such problem set has its own challenges and hence draws from the suite of research a bespoke solution The book will be useful for both theoretical and applied statisticians as well as practitioners to inspect these solutions in the context of the problems in order to draw further understanding awareness and inspiration

Hossain,2024-02-08 For the last four decades the uses of econometric tools and techniques irrespective of discipline have been increasing rapidly for solving problems appropriate decision making and policy formulation Generally it is accepted that the study of modern business and economics is incomplete without a proper knowledge of econometric tools and techniques In view of the increasing complexity and variety of problems in business and economics students and researchers may not be able to cope and hence may remain unfamiliar with many aspects of business and economic problems Thus this book was written to explore basic and advanced studies of econometrics for undergraduate and graduate students of business and economics as well as for researchers already engaged in these fields who require an introduction to econometric methods and their application for solving of real life problems The book offers a balanced presentation of fundamental and advanced levels of econometric concepts and methods along with practical examples of their effective application in real life problems

Building Models for Marketing Decisions Peter S.H. Leeflang,Dick R. Wittink,Michel Wedel,Philippe A.

Naert,2013-06-29 This book is about marketing models and the process of model building Our primary focus is on models that can be used by managers to support marketing decisions It has long been known that simple models usually outperform judgments in predicting outcomes in a wide variety of contexts For example models of judgments tend to provide better forecasts of the outcomes than the judgments themselves because the model eliminates the noise in judgments And since judgments never fully reflect the complexities of the many forces that influence outcomes it is easy to see why models of actual outcomes should be very attractive to marketing decision makers Thus appropriately constructed models can provide insights about structural relations between marketing variables Since models explicate the relations both the process of model building and the model that ultimately results can improve the quality of marketing decisions Managers often use rules of thumb for decisions For example a brand manager will have defined a specific set of alternative brands as the competitive set within a product category Usually this set is based on perceived similarities in brand characteristics advertising messages etc If a new marketing initiative occurs for one of the other brands the brand manager will have a strong inclination to react The reaction is partly based on the manager s desire to maintain some competitive parity in the marketing variables

Spatial Econometrics: Methods and Models L. Anselin,2013-03-09 Spatial econometrics deals with spatial dependence and spatial heterogeneity critical aspects of the data used by regional scientists These characteristics may cause standard econometric techniques to become inappropriate In this book I combine several recent research results to construct a comprehensive approach to the incorporation of spatial effects in econometrics My primary focus is to demonstrate how these spatial effects can be considered as special cases of general frameworks in standard econometrics and to outline how they necessitate a separate set of methods and techniques encompassed within the field of spatial econometrics My viewpoint differs from that taken in the discussion of spatial autocorrelation in spatial statistics e g

most recently by Cliff and Ord 1981 and Upton and Fingleton 1985 in that I am mostly concerned with the relevance of spatial effects on model specification estimation and other inference in what I call a model driven approach as opposed to a data driven approach in spatial statistics I attempt to combine a rigorous econometric perspective with a comprehensive treatment of methodological issues in spatial analysis
