*Speech* Milton Dickens,1974      **Speech: Dynamic Communication** Milton Dickens,1954      *Secrets of Dynamic Communication* Ken Davis,1991 Speaking before a group can be fun and fulfilling if you do it well This practical handbook takes the reader from selection of a theme through the process of developing the focus fleshing out ideas and communicating effectively with the audience It can be used for individual growth and in group settings such as classrooms and seminars

*Speech Dynamics* Felicitas Kleber,Tamara Rathcke,2024-10-07 The relationship between diachronic change and synchronic variation at the articulatory auditory acoustic and social level is one of the greatest puzzles in the study of language Even though plentiful examples exist to suggest that dynamics of synchronic variation and diachronic change are tightly interconnected a unified theory to account for language change in its relationship to all layers of synchronic variation remains a desideratum This volume compiles new evidence from articulatory acoustic auditory sociolinguistic and phonological analyses of segmental and prosodic data and computational modelling and offers a refreshing theoretical angle on the ongoing debates in language change The volume is divided into three sections each focusing on one aspect of speech dynamics the historical the emerging and the theoretical each making a step toward a unified view of speech dynamics at the interface of synchronic variation and diachronic change The large range of methodologies and theories represented in this book will appeal to scholars from a variety of linguistic fields with an interest in speech dynamics including phoneticians phonologists sociolinguists typologists computational and historical linguists      *Dynamics of Speech Production and Perception* P.L. Divenyi,S. Greenberg,G. Meyer,2006-09-20 That speech is a dynamic process strikes as a tautology whether from the standpoint of the talker the listener or the engineer speech is an action a sound or a signal continuously changing in time This book presents a collection of papers which looks at speech as a dynamic process and highlights its particularities

the regions defined in the tube correspond to the main places of articulation for oral vowels and plosive consonants All this implies that these speech sounds are inherent properties of not only the modeled acoustic tube but also of the human speech production system This book stands as a valuable resource for accomplished and aspiring speech scientists as well as for other interested persons in search for an introduction to speech acoustics that takes an unconventional path
