Parallel Computing Architectures and APIs Vivek Kale,2019-12-06 Parallel Computing Architectures and APIs IoT Big Data Stream Processing commences from the point high performance uniprocessors were becoming increasingly complex expensive and power hungry A basic trade off exists between the use of one or a small number of such complex processors at one extreme and a moderate to very large number of simpler processors at the other When combined with a high bandwidth interprocessor communication facility leads to significant simplification of the design process However two major roadblocks prevent the widespread adoption of such moderately to massively parallel architectures the interprocessor communication bottleneck and the difficulty and high cost of algorithm software development One of the most important reasons for studying parallel computing architectures is to learn how to extract the best performance from parallel systems Specifically you must understand its architectures so that you will be able to exploit those architectures during programming via the standardized APIs This book would be useful for analysts designers and developers of high throughput computing systems essential for big data stream processing emanating from IoT driven cyber physical systems CPS This pragmatic book Devolves uniprocessors in terms of a ladder of abstractions to ascertain say performance characteristics at a particular level of abstraction Explains limitations of uniprocessor high performance because of Moore s Law Introduces basics of processors networks and distributed systems Explains characteristics of parallel systems parallel computing models and parallel algorithms Explains the three primary categorical representatives of parallel computing architectures namely shared memory message passing and stream processing Introduces the three primary categorical representatives of parallel programming APIs namely OpenMP MPI and CUDA Provides an overview of Internet of Things IoT wireless sensor networks WSN sensor data processing Big Data and stream processing Provides introduction to 5G communications Edge and Fog computing Parallel Computing Architectures and APIs IoT Big Data Stream Processing discusses stream processing that enables the gathering processing and analysis of high volume heterogeneous continuous Internet of Things IoT big data streams to extract insights and actionable results in real time Application domains requiring data stream management include military homeland security sensor networks financial applications network management web site performance tracking real time credit card fraud detection etc
