**in Practice** Janet Townend, Martin Turner, 2012-12-06 Dyslexia is a specific learning difficulty that hinders the learning of literacy skills. This problem with managing verbal codes in memory is neurologically based and tends to run in families. Other symbolic systems such as mathematics and musical notation can also be affected. Dyslexia can occur at any level of intellectual ability. It can accompany but is not a result of lack of motivation, emotional disturbance, sensory impairment or meagre opportunities. The effects of dyslexia can be alleviated by skilled specialist teaching and committed learning. Moreover, many dyslexic people have visual and spatial abilities which enable them to be successful in a wide range of careers. The appearance of this book is to be welcomed. It represents a full statement of the best practice to be found in the many kinds of intervention that are conducted with dyslexic students. It addresses some fundamental questions that are seldom asked and much of what the skilled teacher knows and does is set down here in print for the first time. From the Preface. Collectively the chapters provide a synthesis of current practice focusing on how to assess and treat the symptoms of dyslexia guided by a proper understanding of the cognitive and linguistic weaknesses that underpin the condition. The book makes clear that the backbone of intervention for dyslexia is a highly structured multisensory approach that teaches reading and spelling skills at the appropriate rate. However, it is also explicit in pointing out that such a programme must be delivered with due attention to individual differences in the other cognitive skills that contribute to literacy development and take account of the learner's style, interests and not least their confidence and self-esteem. This book provides an important resource for teachers who wish to become competent in the skills required for the assessment, teaching, supporting and counselling of dyslexic people in a variety of settings. It promises to reach many teachers and in turn their students and families. Margaret J Snowling, University of York, UK

### **Writing Instruction and Intervention for Struggling Writers**

Michael Dunn, 2019-11-18 Writing is a challenging task for many children. To address this issue, many educational researchers advocate for schools to implement a multi-tiered system of support (MTSS) model where struggling writers can be detected as early as kindergarten and provided with intervention programming to improve their skills and hopefully not need long-term placement in special education. Traditionally, schools have employed the wait-to-fail model where children were offered the opportunity to learn to read, write and do math in the first few years of elementary school. If they still struggled at the end of third grade (age eight), then they would be assessed for special education. The problem with this was not only a delayed assessment timeline but also the standardized tests not having an adequate set of questions to assess early elementary grade skills as well as the ethical problems and racial/ethnic biases of test questions. MTSS provides educators with a renewed emphasis on early intervention and progress monitoring assessment once or twice a week to monitor each student's skills and make instructional changes to promote success. This book offers a description and case examples of how schools and teachers can apply MTSS concepts for writing.

Journal of Educational Methods, 1924 *Phonological Skills and Learning to Read* Usha Goswami, Peter Bryant, 2016-03-23 This book sets out to integrate recent exciting research on the precursors of

reading and early reading strategies adopted by children in the classroom It aims to develop a theory about why early phonological skills are crucial in learning to read and shows how phonological knowledge about rhymes and other units of sound helps children learn about letter sequences when beginning to be taught to read The authors begin by contrasting theories which suggest that children s phonological awareness is a result of the experience of learning to read and those that suggest that phonological awareness precedes and is a causal determinant of reading The authors argue for a version of the second kind of theory and show that children are aware of speech units called onset and rime before they learn to read and spell An important part of the argument is that children make analogies and inferences about these letter sequences in order to read and write new words
