Space 1999 A To Color:

Color Constancy Marc Ebner, 2007-06-05 A human observer is able to recognize the color of objects irrespective of the light used to illuminate them This is called color constancy A digital camera uses a sensor to measure the reflected light meaning that the measured color at each pixel varies according to the color of the illuminant Therefore the resulting colors may not be the same as the colors that were perceived by the observer Obtaining color constant descriptors from image pixels is not only important for digital photography but also valuable for computer vision color based automatic object recognition and color image processing in general This book provides a comprehensive introduction to the field of color constancy describing all the major color constancy algorithms as well as presenting cutting edge research in the area of color image processing Beginning with an in depth look at the human visual system Ebner goes on to examine the theory of color image formation color reproduction and different color spaces discuss algorithms for color constancy under both uniform and non uniform illuminants describe methods for shadow removal and shadow attenuation in digital images evaluate the various algorithms for object recognition and color constancy and compare this to data obtained from experimental psychology set out the different algorithms as pseudo code in an appendix at the end of the book Color Constancy is an ideal reference for practising engineers computer scientists and researchers working in the area of digital color image processing It may also be useful for biologists or scientists in general who are interested in computational theories of the visual brain and bio inspired engineering systems

Multimedia Mining Chabane Djeraba, 2012-12-06 Multimedia Mining A Highway to Intelligent Multimedia Documents brings together experts in digital media content analysis state of art data mining and knowledge discovery in multimedia database systems knowledge engineers and domain experts from diverse applied disciplines Multimedia documents are ubiquitous and often required if not essential in many applications today This phenomenon has made multimedia documents widespread and extremely large There are tools for managing and searching within these collections but the need for tools to extract hidden useful knowledge embedded within multimedia objects is becoming pressing and central for many decision making applications The tools needed today are tools for discovering relationships between objects or segments within multimedia document components such as classifying images based on their content extracting patterns in sound categorizing speech and music and recognizing and tracking objects in video streams

Cosmos 1999 - The Third Year of Space 1999 John K. Balor, 2019-07-10 What does Gerry Anderson s television series SPACE 1999 have in common with Carl Sagan s award winning television documentary COSMOS Not very much one might expect but this book documents an Online Alpha discussion where fans of the science fiction series discuss and debate differences and similarities from a wide range of perspectives some of them arguing that two series may be so closely connected that it might be natural to think of COSMOS as the third year of SPACE 1999 This book is written on an idealistic basis It is sold at the lowest price the publisher was willing to accept A free e book version can be downloaded at www.lulu.com

com **Make It So** Nathan Shedroff, Christopher Noessel, 2012-09-17 Many designers enjoy the interfaces seen in science fiction films and television shows Freed from the rigorous constraints of designing for real users sci fi production designers develop blue sky interfaces that are inspiring humorous and even instructive By carefully studying these outsider user interfaces designers can derive lessons that make their real world designs more cutting edge and successful Information Visualization Colin Ware, 2004-05-05 Information Visualization is the major revision of a classic work on information visualization This book explores the art and science of why we see objects the way we do Based on the science of perception and vision the author presents the key principles at work for a wide range of applications resulting in visualization of improved clarity utility and persuasiveness This is the first work to use the science of perception to help serious designers and analysts optimize understanding and perception of their data visualizations This unique and essential guide to human visual perception and related cognitive principles will enrich courses on information visualization and empower designers to see their way forward Its updated review of empirical research and interface design examples will do much to accelerate innovation and adoption of information visualization New to this edition are a new chapter on visual thinking new sections on face perception and flow visualization and a much expanded chapter on color and color sequences This book will appeal to interaction designers graphic designers of all kinds including web designers financial analysts research scientists and engineers data miners and managers faced with information intensive challenges First work to use the science of perception to help serious designers and analysts optimize understanding and perception of their data visualizations Major revision of this classic work with a new chapter on visual thinking new sections on face perception and flow visualization and a much expanded chapter on color and color sequences New to this edition is the full color treatment throughout to better display over 400 illustrations Mathematics (Education) in the Information Age Stacy A. Costa, Marcel Danesi, Dragana Martinovic, 2020-12-10 This book brings together ideas from experts in cognitive science mathematics and mathematics education to discuss these issues and to present research on how mathematics and its learning and teaching are evolving in the Information Age Given the ever broadening trends in Artificial Intelligence and the processing of information generally the aim is to assess their implications for how math is evolving and how math should now be taught to a generation that has been reared in the Information Age It will also look at the ever spreading assumption that human intelligence may not be unique an idea that dovetails with current philosophies of mind such as posthumanism and transhumanism The role of technology in human evolution has become critical in the contemporary world Therefore a subgoal of this book is to illuminate how humans now use their sophisticated technologies to chart cognitive and social progress Given the interdisciplinary nature of the chapters this will be of interest to all kinds of readers from mathematicians themselves working increasingly with computer scientists to cognitive scientists who carry out research on mathematics cognition and teachers of mathematics in a classroom Database Technologies: Concepts, Methodologies, Tools, and Applications

Erickson, John, 2009-02-28 This reference expands the field of database technologies through four volumes of in depth advanced research articles from nearly 300 of the world's leading professionals Provided by publisher User Centered Design for Medical Visualization Dong, Feng, Ghinea, Gheorghita, Chen, Sherry Y., 2008-05-30 This book features a comprehensive review of advances in medical visualization and human computer interaction It investigates the human roles during a visualization process specifically motivation based design user based design and perception and cognitive based design It also provides real world examples and insight into the analytical and architectural aspects of user centered design Provided by publisher **Face Detection and Gesture Recognition for Human-Computer Interaction** Ming-Hsuan Yang, Narendra Ahuja, 2012-12-06 Traditionally scientific fields have defined boundaries and scientists work on research problems within those boundaries However from time to time those boundaries get shifted or blurred to evolve new fields For instance the original goal of computer vision was to understand a single image of a scene by identifying objects their structure and spatial arrangements This has been referred to as image understanding Recently computer vision has gradually been making the transition away from understanding single images to analyzing image sequences or video understanding Video understanding deals with understanding of video sequences e g recognition of gestures activities facial expressions etc The main shift in the classic paradigm has been from the recognition of static objects in the scene to motion based recognition of actions and events Video understanding has overlapping research problems with other fields therefore blurring the fixed boundaries Computer graphics image processing and video databases have obvious overlap with computer vision The main goal of computer graphics is to generate and animate realistic looking images and videos Researchers in computer graphics are increasingly employing techniques from computer vision to generate the synthetic imagery A good example of this is image based rendering and modeling techniques in which geometry appearance and lighting is derived from real images using computer vision techniques Here the shift is from synthesis to analysis followed by synthesis **The Color of Modernism** Deborah Ascher Barnstone, 2021-12-30 One of the most enduring and pervasive myths about modernist architecture is that it was white pure white walls both inside and out Yet nothing could be further from the truth The Color of Modernism explodes this myth of whiteness by offering a riot of color in modern architectural treatises polemics and buildings Focusing on Germany in the early 20th century one of modernism's most foundational and influential periods it examines the different scientific and artistic color theories which were advanced by members of the German avant garde from Bruno Taut to Walter Gropius to Hans Scharoun German color theory went on to have a profound influence on the modern movement and Germany serves as the key case study for an international phenomenon which encompassed modern architects worldwide from Le Corbusier and Alvar Aalto to Berthold Lubetkin and Lina Bo Bardi Supported by accessible introductions to the development of color theory in philosophy science and the arts the book uses the German case to explore the new ways in which color was used in architecture and urban design turning attention to an important yet overlooked

aspect of the period Much more than a mere correction to the historical record the book leads the reader on an adventure into the color filled worlds of psychology the paranormal theories of sensory perception and pleasure showing how each in turn influenced the modern movement The Color of Modernism will fundamentally change the way the early modernist period is seen and discussed
