Space Law Development And Scope:

Space Law Nandasiri Jasentuliyana, 1992-08-21 This volume presents an analysis of the historical background current status and future development of space law by noted legal scholars It focuses on a distinct and growing field of international law that incorporates both public and private law Specific areas covered are scientific and technical aspects of space and space law the United Nations and other institutional arrangements national regulatory aspects satellite applications commercialization dispute settlement and case law Since the establishment of a special law making body at the United Nations in 1958 there has been a steady expansion of laws and regulations pertaining to space activities The result has been the development of a distinct and mature discipline of international law This analysis of space law by recognized experts in the field will interest scholars practitioners and policy makers involved in the regulation of space use and exploration

Space Law Francis Lyall, Paul B. Larsen, 2016-04-01 The opening of space to exploration and use has had profound effects on society Remote sensing by satellite has improved meteorology land use and the monitoring of the environment Satellite television immediately informs us visually of events in formerly remote locations as well as providing many entertainment channels World telecommunication facilities have been revolutionised Global positioning has improved transport This book examines the varied elements of public law that lie behind and regulate the use of space It also makes suggestions for the development and improvement of the law particularly as private enterprise plays an increasing role in space **Space Law** Em Prof Francis Lyall, Mr Paul B Larsen, 2013-02-28 Space law is an area of International Law that has developed massively in the last fifty years Francis Lyall Emeritus Professor of Public Law at the University of Aberdeen Scotland and Paul B Larsen Adjunct Professor at Georgetown Law Centre Washington DC and formerly lawyer for the Office of the US Secretary of Transportation have been involved with it since their days at the Institute of Air and Space Law McGill University Montreal in 1963 4 and both teach Space Law at their respective Universities This book gathers together their experience in readable form and with an extensive citation of the literature of space law its discussion provides an excellent source for both student and practitioners

Pioneers of Space Law Stephan Hobe, 2013-12-09 International space law is less than 50 years old Although the work on the codification of space law started in the late 1950s the Outer Space Treaty was only adopted in January 1967 However much earlier than that even as early as 1932 the first ideas about legal rules for human activities in outer space were being considered Very little is known about these early drafts and proposals and the pioneering work of early scholars in the field remains relatively unknown This volume seeks to redress this by analysing the biographies and contributions to international space law of eleven such early pioneers whose ground breaking and original work helped to develop the field in important ways The collection starts in the 1930 s with the Czech author Vladimir Mandl and dwells at length on the 1950 s the early time of space flight The section on each pioneer is written by different members of the International Institute of Space Law making this a lively fascinating and unique collection of essays of interest to the whole

community of space lawyers *The Environmental Element in Space Law*, 2008 While decades of space ventures have led to significant technological advances space activities have also brought increasing environmental problems This book examines the current international legal regimes in space law and environmental law in order to ascertain their applicability and efficacy in addressing environmental threats in the space sector The research suggests mechanisms which could improve environmental protection in the sector and strengthen the environmental element in space law These mechanisms include a variety of norm setting strategies used in international environmental management Special attention is drawn to the potential of environmental impact assessment in the space sector and to dispute resolution procedures Like other areas of human activities the space sector should accommodate both economic interests and environmental protection in line with the principle of sustainable development Fundamentals of Space Law and Policy Fabio Tronchetti, 2013-06-29 Presents and addresses key space law and policy issues for the benefit of wider informed audiences that wish to acquaint themselves with the fundamentals of the space law field This brief analyzes in a concise manner the combined influence of space law and policy on international space activities Read in conjunction with the other books in the Springer Space Development series it supports a broader understanding of the business economics engineering legal and procedural aspects of space activities This book will also give the casual reader as well as experts in the field insight on present and future space law and policy trends challenges and opportunities **Outer Space Development, International Relations and Space Law** Edythe Weeks, 2013-02-21 It is the eve of outer space development but few people are aware of this In the absence of awareness people cannot prepare for the opportunities that will arise and so the vast wealth likely to flow to Earth from outer space will cause ever greater inequality and instability in our already unequal and unstable world This book is a call to educators to factor equality and diversity into the process of outer space development by creating a widespread movement to teach outer space development studies to all students especially those who study social and behavioral sciences In calling for this the author is also putting out a call to visionary thinkers to increase public awareness that outer space is already in the process of being developed Her objective is to provide a pedagogical approach aimed at mending the knowledge gap If we fail in this objective we are more likely than ever before to witness ever widening gaps of social and financial inequality The first question that will arise as we embark on this process of course will be Why outer space development People often ask where the money will come from to develop outer space Platinum group metals such as iridium and osmium and various other valuable untapped natural resources have been discovered in abundant quantities and are likely to be mined by companies The discovery of natural resources has sparked development projects in the past These historical patterns of human behavior are occurring again today as companies speed up the process of private spaceship development A myriad of space laws and policies are already in place to support space commercialization Recently the 2010 NASA Authorization Act and various other laws and policies initiated by the US government have placed on the agenda plans to build advanced space transportation

systems to privatize spacecraft development to create commercial space habitats space stations and space settlements to initiate commercial space mining to investigate spacecraft trajectory optimization for landing on near Earth asteroids to engage in commercial spaceport construction and interstellar interplanetary international telecommunications and to launch space exploration missions to near Earth asteroids the Moon Mars and Mars's moons US initiatives have in the past been mirrored by the international community and we can expect to see similar patterns arising on a global scale indeed as this book will demonstrate they already are The global community is experiencing economic recession natural disasters lack of opportunity employment anxiety failing K 12 programs widening inequality gaps uprisings revolutions revolts unmet educational goals and a general failure to uplift inspire and provide meaningful opportunities for significant portions of our population People need something that will allow them to focus anew their talents energies abilities and gifts and use this bleak climate as an opportunity for positive change Outer space development is emerging as an answer to this state of crisis The question is To whom will the benefits accrue Many strategic decisions have already been taken regarding space development of which the global general public is unaware Once legal rights to space resources are granted only those with the capital to take advantage of new laws and policies will be in a position to profit from the new space industries Only those who are in a position to know about outer space development will be in position to take advantage of the opportunities It is important to remember that the global general public has for several decades been paying the start up costs for space exploration research science and technology It's not too late to factor in equality before an infrastructure of inequality is forever with us as we venture to establish the final frontier
