

6 Principles of Graphic Design

Space

The distance around and/or the areas between objects or elements is how you work with space in design. This not only means the space the object takes up, but also the **NEGATIVE SPACE** of where the object isn't.

There are 2 kinds of space:

- **Negative Space:** this is paying attention to the page that surrounds the elements that you have placed on the page (this includes margins). The eye needs a place to rest when looking at your design, and that is what the negative space provides thus allowing the viewer to think about and understand the other elements. It's about making sure your design is not too cluttered or busy.
- **Positive Space:** this is the space taken up on the page by the elements that you have added (such as images, logos, or text). It is important to organize the elements on a page to create focal points, special relationships, and areas of interest.

If your design contains many design elements, then space is very important. It makes the design easier to follow, ties elements together, or highlights an object. Just remember that the space doesn't need to be filled up- leave room for the eye to rest.

Space Research: Physical and Technical Principles Mikhail Galaktionovich Kroshkin, 1972 Experimental data on the space around the Earth and interplanetary space based mainly on rocket and satellite observations are presented First the basic physical parameters of the medium or phenomena are considered and then the parameters of phenomena which since they are dependent to some degree on the basic ones have in turn a corresponding influence on others Characteristics which are completely independent of or only slightly dependent on the others and thus do not affect them are described The results of a study of the effects which specific conditions in space have on the materials structural elements and systems of spacecraft are presented
