Space Rocket:

The Problem with Space Travel Herman Noordung,1995-03 A translation from German of a 1929 treatise by the author Deals with the problem of the space travel Expresses ideas about rocketry and space travel Extensive treatment of the engineering aspects of a space station Extensive bibliography 100 drawings , **Rockets** David Baker,2017-08-01 A rocket is a powerful means of launching things over great distances Most rockets are tube shaped devices that carry a special type of fuel as well as oxygen to burn the fuel Learn more in **Rockets** one of the titles in the All About Space Science series This series examines the history and science of space exploration It also delves into the careers and technological advancements associated with this exciting field of study Soviet Union ,1965 *Rockets and Revolution* Michael G. Smith,2014-12-01 **Rockets and Revolution** offers a multifaceted study of the race toward space in the first half of the twentieth century examining how the Russian European and American pioneers competed against one another in the early years to acquire the fundamentals of rocket science engineer simple rockets and ultimately prepare the path for human spaceflight Between 1903 and 1953 Russia matured in radical and dramatic ways as the tensions and expectations of the Russian revolution drew it both westward and spaceward European and American industrial capacities became the models to imitate and to surpass The burden was always on Soviet Russia to catch up enough to achieve a number of remarkable firsts in these years from the first national rocket society to the first comprehensive surveys of spaceflight Russia rose to the challenges of its Western rivals time and again transcending the arenas of science and technology and adapting rocket science to popular culture science fiction political ideology and military programs While that race seemed well on its way to achieving the goal of space travel and exploring life on other planets during the second half of the twentieth century these scientific advances turned back on humankind with the development of the intercontinental ballistic missile and the coming of the Cold War **Scientific and Technical Aerospace Reports** ,1990 **U.S. Government Research Reports** ,1962 Naval Aviation in Review United States. Office of the Chief of Naval Operations,United States. Department of the Navy. Bureau of Aeronautics,1958 Is International Law Even Law? Leah L. Carmichael,2021-05-07 International law is so fundamentally distinct from domestic law that some even question whether it is the law at all Unlike domestic law in which the state can create enforce and interpret the laws there is no higher authority above states in international law As a result states serve as both creators enforcers and adjudicators of international law and are subject to it Most confoundingly even though there is no higher authority than states in the international system states tend to comply with international law most of the time Further when they do violation international law they go to great lengths to defend their actions as within compliance with the law To understand when and why states treat international law as the law in our international system one must understand both the components of a sound legal argument and the political motivations shaping how laws are created when they are followed and when they are ignored **Red Moon Rising** Greg Autry,Peter Navarro,2024-05-07 The

space race was a critical determining factor in the Cold War After its Sputnik miracle the Soviets loss of the race to the Moon undermined the international mystique of Communism and crushed the USSR s dreams of world domination America s wildly successful Apollo program by sharp contrast brought America global glory and prestige along with a plethora of miracle technologies that accelerated economic growth and strengthened US national security for half a century We are now embroiled with a brutal and autocratic Communist China in a new cold war and second far more consequential race to the Moon whichever country seizes the commanding heights of the moon will have preferential access to vast lunar resources that will determine the quality of life on Earth and the political and moral character of the human diaspora as it advances into the solar system America should win Space Race 2 0 and is leading an international and commercial coalition to do so Yet Communist China is giving no ground even as its rockets soar above us The clear risk Timid and visionless policy makers in the White House and Congress may well surrender the ultimate high ground to the butchers of Beijing Greg Autry and Peter Navarro have been warning of this competition for more than a decade Both were influential in the construction of America s triumphant space agenda during the Trump administration In this book they take you through the technology economics and history of this important topic and provide policy recommendations that will win the Space Race for America Space superiority is one of the most important goals for long term American survival Greg Autry and Peter Navarro clearly describe the challenges we face in outer space and the devastating consequences if America cedes space leadership to other nations The dangers we face are real If we don t confront them the future could be catastrophic for America and the world Newt Gingrich 50th Speaker of the United States House of Representatives This superbly researched book is equivalent to the warnings by Winston Churchill in the 1930s regarding the catastrophic failure of leadership by the West to counter Nazi Germany and the Empire of Japan before the onset of WWII If we prevail in this space race which makes the one with the Soviets in the 1960s look like child s play by comparison the political social and economic benefits to the world will be beyond measure Courtney Stadd Former Director Commercial Space Policy at the White House National Space Council Former NASA Chief of Staff and currently Executive Vice President Beyond Earth Institute This book needs to be on the desk of every official in the Pentagon Congress the White House and the Western World not to mention everyone who wants to understand the Space Race 2 0 now fully engaged between the USA and China in the context of a world that is increasingly hostile to the values of our American republic and Western civilization in general Homer Hickam NASA Engineer and Author of Rocket Boys aka October Sky The threat of the 21st century the authors nailed it The United States is an aerospace nation from the beaches of Kitty Hawk to the International Space Station to the James Webb Space Telescope and beyond this and all of the benefits of access to and use of space for the betterment of humankind are at risk The authors paint a clear picture of the threats to the free use of space from basic commerce to international security A must read Major General Ret Lee Levy Member of the NASA Advisory Council
