Space, Time, and Stuff Frank Arntzenius, Cian Seán Dorr, 2012-01-19 Frank Arntzenius presents a series of radical ideas about the structure of space and time and establishes a new metaphysical position which holds that the fundamental structure of the physical world is purely geometrical structure He argues that we should broaden our conceptual horizons and accept that spaces other than spacetime may exist

Space-Time Computing with Temporal Neural Networks James E. Smith, 2017-05-18 Understanding and implementing the brain s computational paradigm is the one true grand challenge facing computer researchers Not only are the brain s computational capabilities far beyond those of conventional computers its energy efficiency is truly remarkable This book written from the perspective of a computer designer and targeted at computer researchers is intended to give both background and lay out a course of action for studying the brain s computational paradigm It contains a mix of concepts and ideas drawn from computational neuroscience combined with those of the author As background relevant biological features are described in terms of their computational and communication properties The brain s neocortex is constructed of massively interconnected neurons that compute and communicate via voltage spikes and a strong argument can be made that precise spike timing is an essential element of the paradigm Drawing from the biological features a mathematics based computational paradigm is constructed

The key feature is spiking neurons that perform communication and processing in space time with emphasis on time In these paradigms time is used as a freely available resource for both communication and computation Neuron models are first discussed in general and one is chosen for detailed development Using the model single neuron computation is first explored Neuron inputs are encoded as spike patterns and the neuron is trained to identify input pattern similarities Individual neurons are building blocks for constructing larger ensembles referred to as columns These columns are trained in an unsupervised manner and operate collectively to perform the basic cognitive function of pattern clustering Similar input patterns are mapped to a much smaller set of similar output patterns thereby dividing the input patterns into identifiable clusters Larger cognitive systems are formed by combining columns into a hierarchical architecture These higher level architectures are the subject of ongoing study and progress to date is described in detail in later chapters Simulation plays a major role in model development and the simulation infrastructure developed by the author is described Understanding Space, Time and Causality B.V. Sreekantan,Sisir Roy,2019-12-06 This book examines issues related to the concepts of space time and causality in the context of modern physics and ancient Indian traditions It looks at the similarity and convergence of these concepts of modern physics with those discussed in ancient Indian wisdom The volume brings the methodologies of empiricism and introspection together to highlight the synergy between these two strands It discusses wide ranging themes including the quantum vacuum as ultimate reality quantum entanglement and metaphysics of relations identity and individuality and dark energy and anti matter as discussed in physics and in Indian philosophical schools like Vedanta Yoga Buddhist Kashmiri Shaivism and Jaina Philosophy First of its kind this book will be an essential read for scholars and researches of philosophy Indian philosophy philosophy of science theoretical physics and social science *Paths Through Space-Time* Pasquale De Marco,2025-03-09 Journey through the mind of a physicist as we explore the fabric of space and time in this captivating book From the vastness of the cosmos to the mysteries of quantum gravity we will unravel the secrets of the universe and our place within it Written in a clear and engaging style this book is perfect for anyone who wants to learn more about the universe and its mysteries We will begin by examining the basic concepts of space and time and how they are related to gravity We will then explore the Big Bang theory which is the leading scientific explanation for the origin of the universe We will also discuss the formation and evolution of stars galaxies and other cosmic structures Finally we will look at some of the biggest mysteries in physics today such as the nature of dark matter and dark energy the problem of quantum gravity and the possibility of a multiverse Along the way we will encounter many strange and wonderful things We will learn about the vastness of space the beauty of mathematics and the limits of human understanding But most importantly we will come to appreciate the interconnectedness of all things in the universe and our own place within it Whether you are a seasoned physicist or a curious layperson this book has something for everyone It is a journey of discovery that will leave you with a new understanding of the universe and your place within it If you like this book write a review Understanding

Space-Time Robert DiSalle, 2006-04-27 Presenting the history of space time physics from Newton to Einstein as a philosophical development DiSalle reflects our increasing understanding of the connections between ideas of space and time and our physical knowledge He suggests that philosophy's greatest impact on physics has come about less by the influence of philosophical hypotheses than by the philosophical analysis of concepts of space time and motion and the roles they play in our assumptions about physical objects and physical measurements This way of thinking leads to interpretations of the work of Newton and Einstein and the connections between them It also offers ways of looking at old questions about a priori knowledge the physical interpretation of mathematics and the nature of conceptual change Understanding Space Time will interest readers in philosophy history and philosophy of science and physics as well as readers interested in the relations between physics and philosophy

Towards a Theory of Spacetime Theories Dennis Lehmkuhl, Gregor Schiemann, Erhard Scholz, 2017-01-05 This contributed volume is the result of a July 2010 workshop at the University of Wuppertal Interdisciplinary Centre for Science and Technology Studies which brought together world wide experts from physics philosophy and history in order to address a set of questions first posed in the 1950s How do we compare spacetime theories How do we judge objectively which is the best theory Is there even a unique answer to this question The goal of the workshop and of this book is to contribute to the development of a meta theory of spacetime theories Such a meta theory would reveal insights about specific spacetime theories by distilling their essential similarities and differences deliver a framework for a class of theories that could be helpful as a blueprint to build other meta theories and provide a higher level viewpoint for judging which theory most accurately describes nature But rather than drawing a map in broad strokes the focus is on particularly rich regions in the space of spacetime theories This work will be of interest to physicists as well as philosophers and historians of science working with or interested in General Relativity and or Space Time and Gravitation more generally

Space, Time, and Spacetime Lawrence Sklar, 1977-03-15 In this book Lawrence Sklar demonstrates the interdependence of science and philosophy by examining a number of crucial problems on the nature of space and time problems that require for their resolution the resources of philosophy and of physics The overall issues explored are our knowledge of the geometry of the world the existence of spacetime as an entity over and above the material objects of the world the relation between temporal order and causal order and the problem of the direction of time Without neglecting the most subtle philosophical points or the most advanced contributions of contemporary physics the author has taken pains to make his explorations intelligible to the reader with no advanced training in physics mathematics or philosophy The arguments are set forth step by step beginning from first principles and the philosophical discussions are supplemented in detail by nontechnical expositions of crucial features of physical theories

A Collection of Polish Works on Philosophical Problems of Time and Spacetime Helena Eilstein, 2013-04-17 This is a collection of some works of Polish philosophers and physicists on philosophical problems of time and spacetime Without restricting the thematic scope of the papers the issue

concerning objectivity of time flow runs as a uniting thread through most of them. Partly it is discussed directly and partly the authors focus on themes which are of paramount importance for one's attitude to that question. In the first six papers the authors deal with their topics against the background of contemporary physics, its theories, its difficulties and discussed conjectures. For the paper of S. Snihur that background is provided by everyday world outlook and the author discusses the problem of existence and character of the future in the light of basic principles of classical logic. The paper of A. Płatewski about the views of the outstanding Polish philosopher Roman Ingarden enriches the thematic scope of the collection introducing into it some questions from philosophical anthropology and ethics.

JERZY GOŁOŚ MOTION SPACE TIME

Abstract The paper discusses the properties of spacetime we study by analyzing the phenomenon of motion. Of special interest are the spacetime symmetries, the spacetime structures and the ontological status of spacetime. These problems are considered on the grounds of the classical theories of motion contained in Newtonian physics, special and general theory of relativity. The controversy between an absolute and a relational conception of motion and its ontological implications are also analyzed.
