Space Time And Creation:

Space, Time, and Creation Milton Karl Munitz, 1957 **The Spacetime Model , From Creation to Re-Creation**
Daniel Lazich, 2021-09-27 Within the last forty years scientific discoveries and knowledge about our universe contain unprecedented theological implications They imply that the creator exists more so than ever before These discoveries have developed a worldview that challenges both theologians and scientists to engage in a mutually fruitful dialogue From Creation to Re Creation uniquely presents God s accomplishments as author Daniel Lazich transports himself to a time when authors wrote creation narratives to depict the contrast between the ancient epics and biblical narrative It forcefully asserts that the creation of this world and humankind was accomplished by the Creator who loves humanity selflessly This assertion is backed by the most advanced study and research concerning our universe s nature Lazich writes that the final observer in quantum cosmology and God in the Bible are the same From Creation to Re Creation employs unprecedented theological implications to assert that the creator s existence is necessary for the universe and humankind in it to exist *PROTO SPACE-TIME* DAVID J L SAVAGE, *PROTO SPACE TIME* Rewriting the Fabric of Reality What if space and time as we have been taught it are not fundamental What if everything we thought we understood from gravity to consciousness is just a surface ripple a visible pattern riding on something deeper older and far more intelligent In Proto Space Time David J L Savage unveils a bold new theory that challenges the most sacred pillars of modern science Seamlessly blending physics philosophy and poetic clarity this revolutionary book proposes that the universe we observe is not the foundation but the consequence a visible bloom atop a vast invisible root system he calls the Proto Space Time Field From this field Savage argues arise not only space time gravity and matter but consciousness memory and the very structure of life itself With stunning clarity Proto Space Time reframes dark energy not as a cosmic mystery but as a dynamic output of this deeper field Gravity is unmasked not as a force but as an emergent illusion Entanglement is recast as the universal scaffolding of all creation Across 14 compelling chapters the book guides readers through The collapse of spacetime as a first principle A reimagining of the Higgs field as a cosmic regulator The entropic engine of expansion misnamed dark energy How galaxies and spiral symmetry echo deeper field attractors A mind bending reinterpretation of black holes as quantum information vaults The future of artificial intelligence in a quantum aware universe And a radical synthesis one that reweaves physics with metaphysics Drawing on both established science and visionary speculation Savage presents a model that invites not only understanding but participation This is not a passive cosmos It is intelligent recursive self aware And we the observers are not separate from it but extensions of its living memory For readers of Carlo Rovelli Brian Greene and Rupert Sheldrake this book offers a rare fusion of rigour and imagination placing it squarely at the intersection of breakthrough science and spiritual inquiry It dares to suggest that the mind is not merely a side effect of the brain but a quantum phenomenon threaded into the very fabric of spacetime You are not in the universe The universe is in you Proto Space Time is not just a

theory It is a map to a new paradigm A call to witness the invisible To remember the real To ask not what the universe is made of but why it remembers creates and evolves at all Whether you re a physicist philosopher poet or seeker then this book may just shift the lens through which you see everything

Unified Field Mechanics: Natural Science Beyond The Veil Of Spacetime - Proceedings Of The Ix Symposium Honoring Noted French Mathematical Physicist

Jean-pierre Vigier Richard L Amoroso,Louis H Kauffman,Peter Rowlands,2015-09-08 Unified Field Mechanics the topic of the 9th international symposium honoring noted French mathematical physicist Jean Pierre Vigier cannot be considered highly speculative as a myopic critic might surmise The 8th Vigier Symposium proceedings The Physics of Reality should in fact be touted as a companion volume because of its dramatic theoretical Field Mechanics in additional dimensionality Many still consider the Planck scale zero point field stochastic quantum foam as the basement of reality This could only be considered true under the limitations of the Copenhagen interpretation of quantum theory As we enter the next regime of Unified Field Mechanics we now know that the energy dependent Einstein Minkowski manifold called spacetime has a finite radius beyond which a large scale multiverse beckons So far a battery of 14 experiments has been designed to falsify the model When the 1st is successfully performed a revolution in Natural Science will occur This volume strengthens and expands the theoretical and experimental basis for that immanent new age

Quantum Mechanics in Curved Space-Time Jurgen Audretsch,V. de Sabbata,2012-12-06 Quantum mechanics and quantum field theory on one hand and Gravity as a theory of curved space time on the other are the two great conceptual schemes of modern theoretical physics For many decades they have lived peacefully together for a simple reason it was a coexistence without much interaction There has been the family of relativists and the other family of elementary particle physicists and both sides have been convinced that their problems have not very much to do with the problems of the respective other side This was a situation which could not last forever because the two theoretical schemes have a particular structural trait in common their claim for totality and universality Namely on one hand all physical theories have to be formulated in a quantum mechanical manner and on the other hand gravity as curved space time influences all processes and vice versa It was therefore only a question of time that physically relevant domains of application would attract a general interest which demand a combined application of both theoretical schemes But it is immediately obvious that such an application of both schemes is possible if the schemes are taken as they are Something new is needed which reconciles gravity and quantum mechanics During the last two decades we are now doing the first steps towards this more general theory and we are confronted with fundamental difficulties

Creation and Humanity Veli-Matti Karkkainen,2015-03-26 The third installment in a wide and deep constructive theology for our time This third volume of Veli Matti Karkkainen's ambitious five volume theology project develops a Christian theology of creation and humanity theological anthropology in dialogue with the Christian tradition with contemporary theology in all its global and contextual diversity and with other major living faiths Judaism Islam Buddhism and Hinduism In

constructing his theology of creation and humanity Karkkainen uniquely engages the natural sciences including physical cosmological and neuroscientific theories He devotes particular attention to the topics of divine action in a world subjected to scientific study environmental pollution human flourishing and the theological implications of evolutionary theory with regard to both cosmos and humanity **Christian Eschatology and the Physical Universe** David Wilkinson, 2010-05-27

Does matter matter The scientific picture of the end of the physical Universe has undergone dramatic changes since the turn of the 21st century with its future characterized by accelerated expansion and futility Yet Christian theology has been largely silent on this despite the interest in eschatology in popular culture and in theology itself What can Christian theology learn from and contribute to the scientific picture of the future of the Universe Can the biblical narratives of creation and new creation have a fruitful dialogue with scientific discoveries David Wilkinson shows what a fruitful dialogue this can be Critiquing the folk eschatology of the Left Behind series the misguided faith of the scientific optimists and the lack of scientific engagement of the theologians of hope Wilkinson argues for a rediscovery of the theological theme of new creation and the centrality of bodily resurrection **Quantum Field Theory in Curved Spacetime** Leonard Parker, David

Toms, 2009-08-20 Quantum field theory in curved spacetime has been remarkably fruitful It can be used to explain how the large scale structure of the universe and the anisotropies of the cosmic background radiation that we observe today first arose Similarly it provides a deep connection between general relativity thermodynamics and quantum field theory This book develops quantum field theory in curved spacetime in a pedagogical style suitable for graduate students The authors present detailed physically motivated derivations of cosmological and black hole processes in which curved spacetime plays a key role They explain how such processes in the rapidly expanding early universe leave observable consequences today and how in the context of evaporating black holes these processes uncover deep connections between gravitation and elementary particles The authors also lucidly describe many other aspects of free and interacting quantized fields in curved spacetime

Creation of the Universe Lizhi Fang, Shu Xian Li, 1989 is a worthwhile elementary treatment of the cosmology of the early Universe written with a liveliness and simplicity that will surely encourage students to pursue the subject further John D Barrow Nature 1989 a superb guide to what is known about cosmology The authors also leave you with a sense of anticipation and excitement David Hughes New Scientist 1989 The book is well written and interesting particularly in its use of Chinese stories throughout The book contains all the standard material found in such texts The chapters on the thermodynamics of the Universe are particularly good this is a first rate book of its genre and is heartily recommended Kenneth Dunn Mathematical Reviews 1993 The best popular account of the science that explains how the universe can be friendly to life is a book Creation of the Universe by the Chinese astronomers Fang Li Zhi and Li Shu Xian The book was translated into English and published by World Scientific Publishing in 1989 Fang Li Zhi is the famous dissident astronomer now living in exile in the United States I particularly recommend Chapter 6 with the title How Order Was Born of Chaos This
